Right, but he was saying that Techs/Generals could get 2x2 by fraudulent means and
that they could get them in the mainland US from the FCC sequentially.

So much for any effort to improve marketingof code to newcomers.
Instead you now get the "victim" whine. In the end, the future of code use
in the amateur bands is totally in the hands of those that profess its
merits. Either code enthusiasts will take on the challenge of recruiting
(as is the case for most hobby, and/or entertainment
aspects of life) new code enthusiasts or they won't.

But in the end, who cares, so what? The bands are free and no
one has a monopoly or can dictate to all. If someone doesn't want to
QSO with me for whatever reason, I just move on to someone else.
Why let anyONE dictate how we individually enjoy or pursue
ham radio. For every jerk on the air there's lot's more fine
folks that just want to enjoy their hobby.

Works for me!

I have only what I heard on the John Gambling WABC NY AM talk radio yesterday. Apparently a group of homeowners has enlisted the support of the ACLU in opposing homeowners association rules in the Twin Rivers development in East Winsor, New Jersey.

I have nothing else as to detail, but I'm looking on the net...so far with no results. I only caught a brief disussion from the radio which didn't state exactly what the lawsuit details entailed.

If anyone else has more info, please post.

Cheers,
Bill K2UNK

3 families painted their homes in colors other than approved by the association, which lead to fines by the association. The association is now being sued by the homeowners to have all the association rules thrown out as unconstitutional on the basis they were not notified that there were any rules to begin with, despite the fact they signed papers abiding by the rules of the association. According to the 3 families, they signed "under duress".

3346. Best CW Band For Portable QRP Work?

Newsgroup: rec.radio.amateur.policy
Date: 2002-08-16 14:25:23 UTC
From: wa2si@arrl.net
Message-ID: <b7d1465c.0208160625.360142c8@posting.google.com>
Source record: 51257

Hi all,

I would like to hear opinions on the best band for QRP CW work. Given that the sunspot cycle in on the downslide, in a few years I'd like to do some portable QRP work abroad. Of course, one must consider the manageability of a portable doublet (Or perhaps a folded dipole?) for the desired band(s) of operation. That's why I ordered a 20-meter Wilderness SST (They don't offer a 15-meter model.) QRP CW rig kit. A half-wave doublet would only be approx. 33 ft. long. The first night I arrived in Quito, we went on the roof of my uncle's apartment building to enjoy a breathtaking view of the city at night...more than enough space for a 33 ft. dipole.

Anyhoo...after building the SST, I'd kinda like to build an Elecraft K1 four band QRP CW rig kit. It has an option for an internal antenna tuner and a noise blanker that I'd also want. It comes with 40, 30, 20, and either 17 or 15-meters as the last band. It appears to be a sweet rig for such a small package, but at $473...it's a tad pricey. That's why I wonder if it's really worth it for just a rig that'll be employed on vacations, long weekends, and perhaps the occasional daytrip? The SST is pretty cost effective for such a small package. I'm wondering if it'll be all I ever really need?

I have all bands available to me at home, but no practical experience with their characteristics...especially at the bottom of a cycle. If 2 watts on 20-meters'll do the job reliably...then great! I can't really say that I'd look forward to hanging a 66 ft. dipole ANYWHERE on vacation, however...? My uncle also owns a farm about three blocks away from the Mitad del Mundo site and they also have a post office right there so you can have your postcards postmarked 'Mitad del Mundo' or "middle of the world." I'd love to send some QSL cards out from there with my HC2 call and a picture of the site. The next trip also includes plans for a visit to the Galapagos Isles., so the order for the custom QSL cards will go in as soon as I know the call.

Sorry, if I rambled on...this is an example of how CW can really work toward a newbie's advantage. Sure, I could go out and buy a FT-817 and try to work voice. But when you're staying in a quiet house/apartment and you don't want to disturb/awaken the entire household, (And that damn dog could hear a mouse pee on cotton!) what better way than to don a set of headphones and break out the paddles? There's also a nice sense of accomplishment with putting something OTA that you've built (Although I acknowledge that these kits aren't exactly "homebrew.")...especially with a nice homebrew aerial. Thanks in advance for any comments.

Note that when real. practical ham radio info is requested (like
N0IMD's antenna dilemma) there is deafening silence from certain
parties, and it's left up to the long-time-licensed AMATEURS to help
out....

> That's why he's so torqued about being locked out of the ARRL
> members-only site.

Members aren't "locked out". If the ARRL just gave it all away they'd
be eliminating a major reason to be a member.

Didja know senior citizens get a discount?

There's more to it than that. They are also claiming that the
Association has assumed the role of a local government without the
"checks and balances" which the members would have with respect to
its actions, and that the Association board has violated its own
bylaws by refusing to furnish information on membership and
finances as required.

Any web site with more details?

I'm really curious as to how the ACLU has structured the "duress" argument.

Cheers,
Bill K2UNK

Maybe in the ACLU site, but none was mentioned during the interview on
the Gambling Show. As as to duress..according to the lawyer..they had
to sign if they wanted to live in the community and they DID want to
live in that community..so go figure

Roger, I have a 1x3 call, not a 2x2 call. I was one of the few who chose to
keep his stateside callsign when I was stationed on Guam.

You remind me of the Farside cartoon where the boy is pushing against the
door that has a "Pull" sign on it. Above the door is another sign. It
says, "School for Gifted Students."

Not unlike a lot of other things. Yes, all the lawns should be no higher
than two inches (I don't want my neighbors' lawns looking like weeds).
Also, no RVs parked in the driveway (put it in your garage). Also no
antennas. But, I want to paint my house differently than yours. Someone
else figures all of the rules are good - except, of course, they should be
able to park their RV in the driveway since they paid for it. Someone else
believes in greenpeace and wants their lawn looking 'natural'. CBers
believe the rules should apply to only licensed individuals. Go figure.

In article <b7d1465c.0208160625.360142c8@posting.google.com>, wa2si@arrl.net (Bert Craig) writes:

>I would like to hear opinions on the best band for QRP CW work.

There is no one best band. The most popular combo is 20/40.

>Given
>that the sunspot cycle in on the downslide, in a few years I'd like to
>do some portable QRP work abroad. Of course, one must consider the
>manageability of a portable doublet (Or perhaps a folded dipole?) for
>the desired band(s) of operation.

Consider the following:

- Plain vanilla dipole
- Trap dipole (40/20 would be only about 50 feet long)
- G5RV (102' long) or half-size G5RV (51 feet long)
- Full wave loop

>That's why I ordered a 20-meter
>Wilderness SST (They don't offer a 15-meter model.) QRP CW rig kit. A

>space for a 33 ft. dipole.

That'll work. Only problem with 20 is whether or not it's open when you want to get on the air. As the sunspots decline, 20 will be more and more of a daytime-only band.
>
>Anyhoo...after building the SST, I'd kinda like to build an Elecraft
>K1 four band QRP CW rig kit. It has an option for an internal antenna

Good rig, and tiny. You might look around for a used 2-band K1 if money is tight.

>It comes with 40, 30,
>20, and either 17 or 15-meters as the last band. It appears to be a
>sweet rig for such a small package, but at $473...it's a tad pricey.

But worth it! You can also add the options later, rather than having to shell out all the money at once.

>That's why I wonder if it's really worth it for just a rig that'll be
>employed on vacations, long weekends, and perhaps the occasional
>daytrip? The SST is pretty cost effective for such a small package.

As a lawyer I learned to take "alliances" one case at a time. Your "ally" today may be your "opponent" tomorrow, and vice versa.

There are cases where I agreed with the ACLU's position and others where I didn't. Ditto for private-practice lawyers. Ditto for the FCC.

That's how the game is played.

Source record: 51276

At least in the South... I would recommend 30 meters. Very light
population, thus not much QRM. Good propagation most of the time with low
QRN.

20/40 good also. But generally high power on 20 chassing DX and lots of QRN
on 40. Just my opinion.

The "Zoo of Amatuer Radio" is slowly awakening.....

Right now, at 0206 Z I am hearing some music on 3860LSB. Over the
last few nights, the frequency has been active with the "Tommy Tube"
gang, including the infamous KN4CF, aka "Chicken Feathers"

More as the night develops.....

Lloyd, N0VFP
Listening from Alabama.

Believe it or not, even us pro-coders, or, more accurately PCTA's (Pro-Code
Test Agenda) people "get it" when you NCTA's speak of "interest" or other
factors relating to relative ease in learning the code. You see, a lot of us,
myself included, had to overcome this very same lack of "interest" in the
code before we learned it, began using it, and finally realized it's many
benefits and advantages. This is absolutely nothing new or unique.

>My opinion/choice is to learn it to meet the requirements set forth by the
>F.C.C. and no other reason. I will never use it as an operating mode, but
>am always willing to comply with whatever rules or "jump thru whatever
>hoops" to get the priviledges afforded by passing the code requirement.
>
>Possibly there would be two reasons why I HATE code: (1) is that it had
>beaten me for over 12 years,

Fourteen years, in my case, but that was completely *my* fault. You see,
I didn't know anything about the code from my own experience. Worse
than that, I could never conceive of myself ever using it, much less "needing"
it for any practical communications purpose. Much worse, I had "taught"
myself how to send Morse code with a homebrewed code practice
oscillator, and could send 20 WPM but couldn't copy even 2 WPM! My
bad attitude, coupled with learning the code the wrong way, effectively
kept me out of ham radio for the best years of my life. Fortunately, I
overcame my personal objections, got some tapes and started listening
to the W1AW code practice sessions, and eventually got my head wrapped
around the concept of operating CW.

>and (2) the type of people and the methods they
>employ to get their message across. Maybe if the delivery of the alleged
>benefits were "marketed" better by the pro-coders, maybe more
>potential/existing hams would enjoy it instead of dreading it.

I have come to the conclusion that there's no way to "market" the Morse code or CW to the satisfaction of people who are dedicated to their objections to learning it. The excuses are all too easy to make, and are now responsible for the reduction and eventual elimination of the testing requirement -- which will most certainly ensure that there will be a significant reduction on the number of Morse/CW users in the future. Those of us on the PCTA side are always blamed for not "marketing" CW and are constantly told that it is our "responsibility" to do a better job of this "marketing" in the future. However, learning the code and getting first-hand experience in using it is the only thing that can possibly convince one of the benefits and advantages of this mode. It is also a very personal thing -- YOU have to do the work -- YOU have to make the effort -- nobody can do it for you. There really isn't any easy way to learning the code, but it does get easier after you get started and stay with it. Attitude is everything -- and if your attitude toward the code is negative, you will guarantee your own failure. Then, of course, you'll have us PCTA's to blame, as usual. It is always comforting to have a readily-available scapegoat.

If you really want to show us pro-code people something, Ryan, stop your supercilious whining, and get over your "dread" on your own. Start working on learning the code with the mindset that you WILL succeed and that you WANT to become a proficient CW operator. Stop blaming others or levying a requirement of more and better salesmanship upon them. Stop making excuses, and start listening to CW. If you haven't taken the 5 WPM code test, then learn the code at that level, pass the test, and then start using it on-the-air. Forego any further objections, blame, and ill-feelings.

You no longer have a progressive, incentivized licensing structure to motivate you, so YOU must now motivate YOURSELF. You may not realize it now, but you can do it. Nobody had to "sell" me on the code, because I *had* to pass the tests to bet an Extra-class license. Therefore, I do not know how to "sell" the code to you -- and I'm not motivated to try. You see, I have MY Extra class license, and it is one which was attained under a more challenging and comprehensive set of requirements than you will be expected to meet.

If you can learn to relax and enjoy the Morse code, you won't believe how much easier it comes to you! Like I said, *I* know you can do it. Now, go find that out for yourself!

<<SNIP>>

Bert:

Due to being an apartment dweller and having to settle for indoor (dipole) antennas, I've made a virtual ham career of the 20-meter band for the past nine years. It is a band that keeps on going, and going, and going, like the Energizer bunny, even when other bands seem to be toast! It's probably the least susceptible to atmospheric noise and other negative factors as well. You could have done a lot worse than to choose 20-meters. I'd also include 40-meter capability for the times when you can employ a longer dipole.

>ham radio.

I'll tell you what, Bill -- just try "moving on" on 10-meter SSB *without*
a 10 - 10 number! Even better (or worse!), try it *with* a 10 - 10 number,
but admit to having forgotten it, and state that you don't really care
about it anyway! I'm reasonably certain the 10-meter SSB'er on the
other end of the QSO will probably care about it! What we have here
is essentially an entire ham radio band being controlled by an
organized gang of number-chasers who have made it perfectly clear
that it's either their way or the highway! Does this sound familiar --
as in, like the very thing that the NCTA has been accusing the PCTA
of for the past dozen years or so?

>For every jerk on the air there's lot's more fine
>folks that just want to enjoy their hobby.

Well, Bill, on ten meters, the "jerks" seem to have a monopoly!
Unfortunately, on 20-meter CW, the FISTS are getting almost as bad!

>
>So much for any effort to improve marketingof code to newcomers.

Bill:

What makes you think that ham radio newcomers *want* the code
"marketed" to them? If you would take Dick's advice and check out the
archives, you'll find that newcomers seem to come pre-loaded with a
negative opinion of the Morse code/CW mode long before they have
had any personal experience with it. Now -- where do you suppose this
negative opinion came from?

>Instead you now get the "victim" whine. In the end, the future of code use
>in the amateur bands is totally in the hands of those that profess its
>merits.

Why is that, Bill? Why do I, as a person how uses and enjoys CW, do *I*
now have to take responsibility for doing something that was handled
very effectively by a previous licensing requirement? I'll tell you what --
let's make things totally fair here. Let's drop the licensing requirements
for people who drive 18-wheelers, and let just anyone with a regular
driver's license be able to get a job driving one. It will then be up to those
who employ them to ensure that they get the training and experience they
need to ensure that they can operate the rigs safely and efficiently. There
would no longer be a requirement for a driver to hold a Class A CDL before
they got a job. Anyone who *wants* to drive a Kenworth with a 53' trailer
loaded up to 80K lbs. CGVW can do so -- because *that's* being
"inclusive." While we're at it, let's get rid of hunting licenses, board
certification of physicians, the entire FAA, and a lot of other things I can
think of that prevent people from doing what they want to do without being
required to meet qualifying standards.

>Either code enthusiasts will take on the challenge of recruiting
>(as is the case for most hobby, and/or entertainment
>aspects of life) new code enthusiasts or they won't.

Why should I "recruit" anyone to the Morse code, or, for that matter,
ham radio itself, Bill? I don't hold your belief that ham radio is for

everyone. I think it is a very unique, specialized, and fairly obscure hobby/service which should attract and retain very few self-motivated, dedicated individuals whose interest is fired by their own curiosity and desire to explore the world of electronic communication as a licensed radio amateur. Moreover, since information *about* ham radio is more readily available than ever before, those who want to learn about it can easily come to ME -- I'm not going to go out and try to "recruit" anyone!

I've got a better idea -- why don't YOU try to "recruit" ME to learn about something in which you have a personal interest! It will be interesting to see how you go about doing it!

God, I hate these little internet slam fest, but they seem to be inevitable. A question though, the Conditional Class license was granted after passing the same test as a General Class license, only not as administered at an FCC field office. Why would a Conditional be a bad thing? Or why would it be less than a General in your mind? For that matter the old Technician Class took the same test also, only with the 5 WPM code test, if I remember correctly.

That's a crock, nobody put a gun to their heads when they decided to buy in that development and sign the deal. Not reading the fine print is usually a legal non-sequiter. But we'll see how it works out, could be interesting.

Aw come on Larry, ACLU is self-destructive enough without opening that can of worms.

So far as I know, the 2nd amendment has shown up once, sometime in the '30s, with a decision that reminds one of a graduation speech: what did he say?

Like a lot of other things Biblical and Constitutional, what appears to be pretty straight up in 21st Century English may have easily been something else when written -- one of the minor advantages of writing Bibles in dead languages. It avoids things like Salome wanting the head of J the B 'by and by' as she does in the KJV.

The term 'keep and bear arms' had a meaning a bit different that it means today. If sufficiently motivated I could preach any side of the issue you had in mind but there may not be enough rotted grape juice in existence for some of them.

And, of course, just because the Founding Fathers (proper background music) said it may or may not, depending on one's POV about enfranchising the dead, justify doing anything about it.

Whatever else the Bill of Rights might be, the draftsmanship stunk and some of them, notably the 9th and 10th sort of wave in the breeze. In the

meantime we are stuck with Grand Juries which date from the days when the Assizes rolled into town. While I do recognize that any system has to run on a good theory and a lot of mythology, any system sanctioning a Coroner's Jury is stretching things a bit far.

Sometime for shits and giggles attend the local ACLU meeting and get a flavor of the org. It is a minor miracle that lunch gets ordered; only Trotskyites can fight like that. So ACLU is a pretty ad hoc bunch that gets hoisted on its own petard (to use a bit of Old English) regularly. The most famous one was supporting the American Nazis right to march thru Skokie IL. A lot is a question of getting someone interested. By and large, ACLU presents about as much threat to civilization as the Unitarian Army; it is largely the same people. Garrison Keilor's line about the UU missionaries converting the natives thru intepretive dance could easily be applied to ACLU.

Richard Baldwin, one of the ACLU founders, had a day job in St. Louis at the Social Work school at Washington U. He is also responsible for a lot of juvenile codes and even wrote a few. The concept of most of the juvie codes is essentially that the wise men will pronounce upon the unworthy bodies of juvies 'in their best interests' which while perhaps practical is not generally in keeping with the prevailing mythology. So he lived to see one of his children eat another; he was something of a tragic figure.

One may not always, indeed rarely, agree with ACLUs position on specific issues but there is something to be said for having a group dedicated to following the rules. But for all the heat, there really is not a lot of light on what the rules are or were ever intended to be. But one thing is for sure: do not go the their lunchs hungry.

Dick:

I see. Tell me, then, what's YOUR interpretation of the Second
Amendment? Do individual citizens have the Right to Keep and Bear
Arms (private possession, largely unfettered by state/federal law),
with the right to readily obtain a license to carry a firearm (concealed
or not) for personal self defense?

From a purely historical perspective, i.e. trying to make sense of just
what those who were not going to ratify a constitution without their pet
ideas had in mind, I think all it was intended to accomplish was to make
it clear that it was legal and non-treasonous for states to have armies.
But I don't kid myself that my opinion is in any way decisive.

The Bill of Rights was what it took to get the Philadelphia constitution ratified and a lot of things suffered along the way. There were, I believe, several more amendments that did not get ratified. It really does not deserve the deification it has received. Great idea, miserable execution.

At the same time, history does indeed argue for an armed populace.

Actually, I was a forecaster at the Joint Typhoon Weather Center. As a senior NCO, no chow hall or latrine duty. But none the less, there is nothing wrong with preparing food or keeping one's bathroom clean. I suppose you don't like potatos or clean bathrooms?

Bet you had a thing for those

Its a true statement. Here, allow me to say it again:

I've known plenty of Tech's and Generals with 2x2's.

Now play back the part where I said they were in the contiguous 48 states.

A couple of technical details such as:
1. Were the homeowner rules forced upon them after moving in?
2. Were the people aware of the rules and had a chance to peruse them before signing papers?

I lived in a neighborhood growing up that has some rules (mostly the 1960's and 1970's "can't put a 10' dish in your front yard, can't put a 10' tall fence that you can't see through in your front yard" kind of thing) - and had anyone seriously challenged them, especially the antenna ones, the covenants would have fallen and the trustees knew it.

The schtick with the Telegraph 2 was that it was a mandatory "leaner's
permit". Ya could not go straight to a Telegraph 1. Ya had to serve a
one-year apprenticship under Telegraph 1s either at sea or at a
maritime shore station to qulify as a Telly 1. I don't think there was
a test for the Telly 1, instead you had to be signed off by the Telly
1 ya worked for. Not very different from the way ya became a
journeyman in the industrial skilled trades.

Response to a question you asked in another post: Yes, I took
advantage of the discount the ARRL offers elders for the first time
this year. I let my membership expire for a few months until my Magic
Birthday rolled around and mailed the dues the next day. As a bonus
for dragging my feet and letting my membership expire the ARRL finally
offered me feebie deals on on a selection of books if I'd "log back
in" with a check. Got me a free copy of Hints 'n Kinks *and* the
discount.

> "marketed" to them?

Larry,

If YOU want to see code continue as a mode of choice after
the code test no longer is mandatory, then it makes
NO difference what newcomers "want". Your mission,
if you choose to accept it, is to enlist sufficient numbers of
newcomers to the mode...regardless of whatever preconcieved
notions they may already have...THAT is basic marketing 101.

> If you would take Dick's advice and check out the
> archives, you'll find that newcomers seem to come pre-loaded with a
> negative opinion of the Morse code/CW mode long before they have
> had any personal experience with it.

Which makes your marketing job tougher, but doesn't change
what you need to acomplish. The ball will still be in your court.

> Now -- where do you suppose this
> negative opinion came from?

It makes no difference. In the marketplace of ideas and opinions,
you will just have to deal with those that think and preach
other than you do. There are plenty of naysayers out there
that would have me believe that my interest in auto racing is
unhealthy, anti-environmental, or just plain dumb. My responce...
they can shove their opinions. I am an advocate of auto racing
and have no problem countering those that think otherwise.

> >Instead you now get the "victim" whine. In the end, the future of code
use
> >in the amateur bands is totally in the hands of those that profess its
> >merits.
>
> Why is that, Bill? Why do I, as a person how uses and enjoys CW, do *I*
> now have to take responsibility for doing something that was handled
> very effectively by a previous licensing requirement?

Because there is NO need for the licensing requirement to exist
simply to draft new devotees to the CW mode. YOU lost that
argument with the FCC in NPRM 98-143.

> I'll tell you what --
> let's make things totally fair here. Let's drop the licensing
requirements
> for people who drive 18-wheelers, and let just anyone with a regular
> driver's license be able to get a job driving one.

Bzzzt...bad anology. I don't want a "novice" at driving 18 wheelers
on the road. That person can cause major death, injury and destruction
if not capable of handling the 18 wheeler. A ham novice at code, however,
creates NO such danger to himself, or others if that code novice just gets
on
the air and haphazardly struggles along with code at even 1 wpm or,
more likely, never uses code at all.

> It will then be up to those
> who employ them to ensure that they get the training and experience they
> need to ensure that they can operate the rigs safely and efficiently.
There
> would no longer be a requirement for a driver to hold a Class A CDL before
> they got a job. Anyone who *wants* to drive a Kenworth with a 53' trailer
> loaded up to 80K lbs. CGVW can do so -- because *that's* being
> "inclusive."

This is NOT about being inclusive...although I think you'd love
to have everyone believe that to be the rational for ending code
testing. There is ONLY one reason code
testing will be dropped totally and that is because the administrations
of the world, including the FCC, have concluded that code
skill is NOT needed to be a ham with HF privileges anymore.

> While we're at it, let's get rid of hunting licenses, board
> certification of physicians, the entire FAA, and a lot of other things I
can
> think of that prevent people from doing what they want to do without being
> required to meet qualifying standards.

All bad analogies because you have failed to discredit the NEED
for the standards (i.e. the licensing requirements).

> >Either code enthusiasts will take on the challenge of recruiting
> >(as is the case for most hobby, and/or entertainment

> >aspects of life) new code enthusiasts or they won't.
>
> Why should I "recruit" anyone to the Morse code, or, for that matter,
> ham radio itself, Bill?

Makes no difference to me. It is strictlky your choice and the choice
of other code advocates IF you want the mode to continue being used.

> I don't hold your belief that ham radio is for
> everyone.

And neither do I, nor can you find any post of mine that ever
made that assertion.

> I think it is a very unique, specialized, and fairly obscure
> hobby/service which should attract and retain very few self-motivated,
> dedicated individuals whose interest is fired by their own curiosity
> and desire to explore the world of electronic communication as a
> licensed radio amateur.

I don't disagree with that in pricipal.

> Moreover, since information *about* ham
> radio is more readily available than ever before, those who want to
> learn about it can easily come to ME -- I'm not going to go out and try
> to "recruit" anyone!

Fair enough, that's YOUR call, your deision, your choice.

> I've got a better idea -- why don't YOU try to "recruit" ME to learn
> about something in which you have a personal interest! It will be
> interesting to see how you go about doing it!

I recruit newcomers to my other personal interests by example
and by being helpful to just about anyone that opens the door by
asking or otherwise being curious as to one of those interests.
What would you consider....auto racing, antique cars (Triumph
sports cars primarily), model trains (HO gauge), local historical
restoration in the town I live in?

Cheers,
Bill K2UNK

Probably 100% true. BUT, the universe of new hams that hold
such belief/opinion is NOT 100% and it is that "niche" of new
hams without such adament dislike for code to whom your
primary marketing effort should be.

Cheers,

If it is really that bad, guess I'd just move to another band entirely.
Options...wow, what a concept!

> Does this sound familiar --
> as in, like the very thing that the NCTA has been accusing the PCTA
> of for the past dozen years or so?

Bzzzt wrongo...NCTA has NOT dictated to PCTA that the code
USE should or must end! Use it all you want. PCTA lost the
requirement argument with the only folks that count, the FCC.

> >For every jerk on the air there's lot's more fine
> >folks that just want to enjoy their hobby.
>
> Well, Bill, on ten meters, the "jerks" seem to have a monopoly!

Even though I know that your post is facetious, It did get me to thinking about this. Why don't people know more about their computers and their networking? Some of the most basic and important information can be picked up by at least knowing how to find their I.P. address.

I mean, the person who is simply content to hook up the computer and use it, without any idea of what is actually happening, is the computer equivalent of the appliance operator, only using SSB, to ragchew with their buddys.

There is so much more going on, and I would caution everyone that they sorely NEED to know what is going on if they are attached to the web these days. If you don't want to, you become the computer networking equivalent of a no-code tech with no ambition to go further.

Thanks Phil,

Is there an electronic copy of the ACLU filing anywhere?

Is this being chronicled anywhere on the internet? Any web site(s)?

Is it the NJ ACLU?

Is there a "contact" that can provide info?

Thanks for any answers.

Legal point/question? If the range of area which includes CC&Rs via homeowners association becomes so large and so pervase, doesn't the "option" to live elsewhere begin to end?

Many areas in California,
Colorado, etc have no new construction which doesn't have the HOA/CCR element.

Not at all. The argument, if I understand it, is that the duress
is only being applied to the acceptance of the HOA and CCRs.
The rest of the purchase/sale isn't being challenged (i.e. the
homeowners are not trying to get out of the purchase,
but rather they "only" want the CC&Rs voided. No small undertaking,
but, if they win, it will not undermine the world of contracts law.

>the HOA/CCR element.

This may be part of the argument. In some parts of the country you cannot find any houses newer than about 30 years of age that don't have extensive deed restrictions. End result is either a 2 hour commute or CC&Rs.

While some states have disclosure rules, others do not. Could be part of the argument.

Here's another angle: Suppose the house-paint rule specifies a certain list of colors - from 20-30 years ago. Some of the colors are no longer available. Homeowner paints with the closest equivalent available. HOA jumps all over the homeowner AFTER the job is all done, demanding $$ and a complete do-over. The close-by neighbors don't really mind but they don;t want to incur the wrath of the Gladys Kravitz types on the HOA board.

One more possibility: HOA rules might require that rule revisions require the approval of ALL the homeowners in the development. So Homeowner A, who is at the east end of the development, must get approval of Homeowner B, who is on the other side and more than a half-mile away.

Sure, nobody in their right mind should buy in those developments. But in some places there is little choice.

Once upon a time nobody would have bought a house where it was forbidden to have chickens in the back yard - even in the middle of a city. Try to find a house that permits that today.

Thank you all for your advice re. my query. After reading your replies
and doing some research, I have settled on the following gear. I will
build the Wilderness SST mainly because I really do want to put
something OTA that I built (assembled?)...even if it is a "kit." For
all operation abroad, I chose the Patcomm PC-500. Here's the link.

http://www.patcommradio.com/webdoc8.htm

I was sufficiently satisfied that it should be a quality product after
checking out the reviews listed below and calling up Patcomm and
speaking with the owner.

http://www.antennex.com/preview/Folder04/Jul401/patcomm.html

http://www.eham.net/reviews/detail/1323

Patcomm is also a local company and I believe in supporting the local infrastructure...if the product quality merits that support. I remember when the PC-16000 first came out. After reading the reviews, I told my XYL that I'd prefer a Yaesu. But this looks like it's a bull's eye. The added SSB capability's cool, although my weapon of choice is shown below.

http://www.mtechnologies.com/palm/

Need I say more?! (Yeah, I got the Code Cube keyer too as a back-up and to use with the SST.)

I took Larry's advice and chose 40 and 20-meters. The SST will be a 30-meter model. (Less congested band.) The PC-500 is compact enough for me to travel with. Oak Hills Reasearch markets a "wall wart" power supply for QRP rigs that delivers 13.7V @ 2.4A...enough for approx. 5 watts output. (But I'm still researching my options re. an adequate power supply.) My aim was a nice portable rig, suitable for travel. The PC-500 just fit the bill...and I got to support a fellow LI ham's business to boot. (I prefer "mom & pop" shops.) The SST should see active duty on local daytrips. (Next scheduled? Atlantic City.) Thanks again and take care.

Few things are perfect for more than 92 minutes. The analysis, such as it is, is based upon the rest of the amendments and the English history behind them. It is really a stretch to believe that people worried about quartering soldiers would believe disarmament was even possible let alone something to worry about.

You will note that the Seventh Amendment requires the availability of a jury trial in civil cases over twenty dollars. Considering the US did not mint a dollar until 1803, what did they mean??

Hi Everyone,

I picked up a pretty ragged TS-700S 2M all-mode rig for a "make-over" project. Does anyone have the service manuals on this rig they'd care to part with?

Per my post it's a compact "all-bander", 160 thru 440 except 222 all
modes, cw, ssb, FM, AM, digital modes @9600bps, etc. Has fully
controllable agc, an RF gain control and ya can install Collins 300 or
500Hz filters in it which should make it a much better cw xcvr than
any of the underdash mobile xcvrs like the 706, TS-50, etc. Power
output thru 6m is 100w, 50w on 2m and 20w on 440. It's somewhat bigger
than the underdash rigs and has better ergonomics and is much lighter
than the desktop rigs. It's basically a high-power version of the
FT-817 and is designed for portable ops. Emergencies, Field Day,
vacations, home stations in cramped spaces, etc. which is why it
appeals to me.
>
>
Price in Japan is rumored to be 148,000 Yen which I think translates
to around $1,300 here. I have no idea what the average ham can afford
to spend on an xcvr but thousands of over-a-kilobuck xcvrs are being
sold every year.

Larry prefers to interpret his one-time experiences (such as that described by him about the ONE time someone on 10-meters gave him Hell for not remembering a 10-10 number) as those that are all indicative of what is common. His paintbrush is probably as broad as any narrow-minded person, and he shares Dick's white can of paint.

I've been on 10-meters loads of times, even during 10-10 contests, and had grand times talking to people. Know what happens when I can't remember my 10-10 number? Kind folks come on and have looked it up for me and give it to me over the air.

Larry--maybe if you'd lose a lot of your attitude, you'd start having some positive experiences in your life.

The fundamental argument appears to be that the HOA is acting
in a quasi governmental manner BUT has none of the checks
and balances associated with government entities.

> One more possibility: HOA rules might require that rule revisions require
the

Well, even governmental zoning tends to prohibit "farm animals"
in residential zoned areas.

What you're really getting is a decent HF rig and a really good all-mode 6/2/440 rig all in one convenient package. Add up the prices of doing all that with separates and the '897 is not very expensive.

Only problem with a does-it-all rig is that if it fails you are off the air, period.

>Price in Japan is rumored to be 148,000 Yen which I think translates
>to around $1,300 here.

I think the JAs actually charge more domestically than export - VAT and all that. I would not be surprised to see the 897 going for just under a kilobuck.

Of course the real trick is to wait a year or two and pick one up used for even less. Check out how much a used FT-817 goes for....

>I have no idea what the average ham can afford
>to spend on an xcvr but thousands of over-a-kilobuck xcvrs are being
>sold every year.

Heck, thousands of 3 kilobuck boxes are being sold. Look at the new Ten Tec Orion - $3300 without the ATU or optional filters. How many FT-1000s of various

flavors have been sold?

Adjusted for inflation, ham gear is really cheap today.

> Instead you now get the "victim" whine.

Get yourself up to date, Bill. The "victim whine" has been howling
through the NG since before I arrived and it continues nonstop. Said
whiners aren't about to give up their only excuse, that is, it's all the
fault of the folks who did learn the code to speed because it was
required for any substantial license, and enroute they discovered that
it is and always was a simple, effective and easily implemented mode,
not that hard to learn and use to effect. Instead the fingers still

point, and I for one find little but disgust for the pointers. It all speaks volumes about their real objectives.

In the end, the future of code use
> in the amateur bands is totally in the hands of those that profess its
> merits.

Either code enthusiasts will take on the challenge of recruiting
> (as is the case for most hobby, and/or entertainment
> aspects of life) new code enthusiasts or they won't.

And as I've long ago concluded, that spells the death knell for radio's most basic and one of it's most effective, and cost effective, modes. It has already changed in that direction significantly among newer users, and the trend can only continue.

You can lead a horse to water, but drinking is his option.

Unfortunately it is an activity at which the NRA is singularly inept beyond an occasional bludgeoning and lots of noise. And it goes back a lot of years.

A number of us deserted the trolley when we, as Governor Evans put it, discovered that deer do not wear bulletproof vests and questioned the defense of teflon bullets. So over the years the NRA membership has become progressively more militant and progressively more stupid.

Not a unique or unknown problem: the parties have far too many people who would rather be ideologically pure than win elections. So we get to enjoy the spectacle of real flakes winning primaries and running like hell for the center to avoid anihilation in the general election. Watching LaPierre shake the money tree is almost as much fun as watching Billy Tauzin do his extortion number.

Ryan,

I can understand your frustration. 30 months is a LONG time to wait for an
invite to be honored. And it's not like Michigan has a small ham population -
quite the contrary.

Now if the ARRL had more of a local/regional focus (as evidenced by actually
showing up at meetings, talking about what is going on in Michigan section,
etc.)
would you be more inclined to join?

(N2EY wrote).

>> > The ARRL is a national organization, and its focus is mainly on national

OK, let's see what your issues are, Kim.

>My belief is that the ARRL is of little significance in
>this area; and I believe it is *BECAUSE* of that, that the ARRL doesn't
>enjoy the membership that they possibly could--if there was a more focused
>local effort on ARRL events, activities, etc.

I think we're trying to say the same things but in different ways.

My impression is that your amateur radio interest is mostly in local/regional aspects of amateur radio, like emergency comms, repeaters, local clubs, hamns you can actually meet in person, etc. Your interest does not lie in working DX, serious contest/award hunting, or chatting with another ham thousands of miles away whom you'll probably never meet and may never even work again.

>Our prior Section Manager,
>Jim/NZ2T (cannot now remember his call), had weekly Section nets; was
>incredibly active in the region and didn't sit still for the status quo, as
>it were.

Key word there is "prior". Why is he gone?

Here in EPA we have daily section nets.

>Remember that ARRL membership is *not* needed or required to become >locally
>active; though the ARRL banner helps with organizations with whom we (the
>ARRL) have an MOU.

'zactly. In your area, membership doesn't make much difference in local/regional level stuff, so why be a member if that's your focus?

>Stepping into local action these days, though, wreaks
>the ire of folks like Larry/K3LT who love to belittle and bemoan what he
>cannot be a part of--calling people of action names like "wannabes." With
>folks like Larry around there are few people willing to get in the trenches

>stuff around here) organizations. But, if you're in to try and make some
>changes, try to make something *maybe* better, work hard to try to get
>something much more than a try going--you'll be shot down by local politics
>and incestuous little groups of true wannabes.

But what does the ARRL have to do with all that? Is the problem that they do
not step in and clean up some of the mess?
>
>The ARRL is a grand organization. I think it was probably much grander long
>ago. We're a different population than we were. What Ryan says is right
>with regard to the subscription. ARRL membership is desired more for the
>cute magazine than for anything else. As to Section Notes? Pah! What a
>joke. The one thing I turn to every issue--other than thumbing through the
>mag--is the Section Notes. Ya taken a look at the Notes for the North Texas
>Section the last several issues? Wahoo...what a wealth of info there. It's
>quite obvious it was last minute and by someone totally disconnected from
>the Section he is supposed to be serving.

And since your focus is local, it doesn't matter much what the ARRL does in,
say EPA or WWA - you don't live there. Nice to read about, but what does it
have to do with DFW or even NTX?

Am I getting closer to the mark?

>PS--Mafia, Ryan? :) You'll have to enlighten?

Something on the order of 'hey - these are some nice bands ya got here. It'd be
an awful shame if something happened to 'em'.......;-)

--

Here, I'll toss in a beef of my own....

This month, the cover article is about a 10-30 MHz log periodic antenna. Took
up several pages. Really neat - but exactly how many of us will ever be able to
even dream of putting one of those monsters up? Seems to me that Section News
and Board minutes are of greater interest to more of the membership - but those
things are being tossed for space considerations. Huh?

3445. Signal Bandwidth?

Newsgroup: rec.radio.amateur.policy
Date: 2002-08-18 14:21:18 UTC
From: n2ey@aol.com
Message-ID: <20020818102118.28714.00000067@mb-cc.aol.com>
Source record: 51209

Minute 64 adopted at the most recent
ARRL Board of Directors meeting on July 19-20, 2002:

http://www.arrl.org/announce/board-0207/64

"On motion of Mr. Frenaye, seconded by Mr. Stinson, it was VOTED that
at the next practical opportunity the ARRL shall petition the FCC to revise
Part 97 to regulate subbands by signal bandwidth instead of by mode."

The last time that was tried, (1970s, Docket 20777), the proposed bandwidths
were 350 Hz and 3.5 kHz. Would have killed AM and severely hobbled data modes.
It was only through the strong response of the AM community that the measure
was rejected.

Anybody have more specifics? (If the limits were, say, 1000 Hz and 6 or 8 kHz,
I'd be for it).

Should AM on amateur HF be outlawed? (I say NO WAY!)

Jim, if I remember correctly, the Great Lakes SM just stepped down at the last meeting, in part due to the removal of business information from the magazine QST. Additionally, I think a sidenote said that he wore out 3 cars in the service to the ARRL, visiting hamfests. Does any of this ring a bell?

Roger, I'm just trying to help you work through your current crisis. Once the excitement of using all your swear words on someone new grows stale, you might be able to calm down and look at the situation rationally.

Providing there's a rational bone in your body.

The 10X number probably serves the same purpose as the SMIRK number or the
SWOT number.

Does FISTS have numbers? Certainly. Do people give out FISTS numbers?

Dunno. If they did would Larry give up CW?

Kim:

On what do you base the assertion that that was a "one-time experience?"
I had several similar experiences with Ten-Ten people -- it's just that that
particular one was the last straw -- and I'm not the only one who has
had and reported similar experiences with Ten-Ten, in this newsgroup and
elsewhere.

> His paintbrush is probably as broad as any narrow-minded person,
>and he shares Dick's white can of paint.

Well, Kim, if you were my conscience, which you are not, that may have
some bearing on my behavior. However, in reality, it's just more of you're
ignorance showing through.

>I've been on 10-meters loads of times, even during 10-10 contests, and had

>changes and related issues.)

Ryan:

Whenever I meet a new or prospective ham in person, the issue of the changes
to the license structure never come up. I just tell them what the current
requirements are, how to go about getting started at meeting them, and offering
answers to their questions. The objections to the Morse code, and remarks
about same, usually are started by them, not me. The last time, after going
thru
all the requirements, etc. the first question the "newcomer" asked me was,
"When are they going to get RID of the code." I asked why he wanted to
get "RID" of the code, and his reply was, "This is the 21st Century, that's
why!"
Of course, it was the year 2000 at the time, still well within the 20th
Century.
To make a long story short, this guy just had a major Jones going on against
the code, and came up with virtually the entire litany of insults about people
who know, use, and enjoy using CW. At this point, I just wished him luck and
walked away. Now, where do you think he got that attitude? Do you think
he would have been receptive to a "sales pitch" on the code?

>Again, there may be some of the tech licensure who have not declared an
>interested in the N.C.I. mindset. But I am sure after meeting/talking to
>some hams out there, their minds may have changed because of the attitudes
>that go with some of the "coders."

Well, I don't know what you're referring to, but I believe you're conveniently
overlooking the fact that the "no-coders" are almost universally locked and
loaded with an endless string of complaints, objections, and generalized
miserable attitudes toward the code. And they're not "getting it" from
"coders" with "bad attitudes." In the real (non-Usenet) world of ham radio,
Morse code/CW lovers are universally helpful and accommodating to
newcomers who genuinely want to make the effort to learn the code and
start using CW on-the-air. However, when we start a code training class
with 15 people and only three show up for the second session, there's not
much we can do to get them back in. THEY have to have the interest;

THEY have to find the motivation; THEY have to make the effort. Nobody had to "sell" me on CW; I found the motivation because I wanted to be a ham, and the requirement was in place at the time.

All this prevaricating about the "bad attitudes" of the "coders" is doing nothing to help you, and quite frankly, nobody will ever care. The only thing that matters is what YOU do as a ham, including learning the code. Nobody can say any magic words or take any magic steps to give you the interest, motivation, and dedication required to learn the code and become a successful CW user. And griping about some perceived disdain from "coders" will get you absolutely nowhere.

>What's that expression, "You can
>attract more ******* with honey that feces?" (or something like that)

I think the expression you're searching for is, "You can attract more flies with honey than with vinegar." My suggestion: Stop behaving like a fly and start acting like a man, instead. It will do you a lot more good than whining about something which gives you a convenient excuse to fail.

Mike, similarly, what does mashing an on-off switch in the CW mode have to
do with imparting any knowledge of radio operation or theory?

Imagine if the people who recognize that the code EXAM serves no useful
purpose did not voice their opinion?

Then you haven't seen "Gun Owners of America." Makes the NRA look like gun
grabbers.

I heard on NPR today some clips of a new and improved "Black Panthers"
movement stating that a race-war is inevitable and that blacks should arm
themselves. I wonder what they'll spend the reparation money on?

Colt pre-Bans?

Phil:

What did the NRA becoming "political in nature" have to do with your competition pistol shooting? Were they giving you a good score only if your groups were right of center? Were they denying entry to competitors who were registered Democrats?

The NRA's political action is there to support and defend the right of American Citizens to Keep and Bear Arms. As a competitive shooter, what problem do (did) you have with that concept?

> And I disagreed with Charlton Heston kowtowing to Cecil B. DeMille

Larry, given the impartiality that you are currently claiming, it's too bad you don't live down the street from Val. Instead of the fair rules you are currently claiming to live by, Val came on here with pre-conceived ideas gleaned from his anti-NCT neighbor and proceded to troll. Val, an NCT by the way, is going to learn the code.

Well yes, but the FCC ran out of the style of 2x2 calls that techs and
generals were to get. Now they get novice 2x3's unless they do the
vanity call thing. IIRC, KV4FZ would be a style of call techs could
have, but not AB8MQ style calls. Those are for extras.

It also gives invaders a disincentive. Harder to occupy us if many citizens are ambushing your troops. Probably not so important today, but back in the old days before long range bombers and nuke bombs and cruise missiles it probably helped some. Heard that the British had big problems with snipers hiding behind trees and such picking off redcoats back in the Revolutionary War. And we'd try for the officers too.

And don't forget the idiots who stored many guns in a corner of the bedroom, imcluding their children's toy guns, then tried to turn it into a gun control issue when their little boy shot his little sister (with a real gun he couldn't tell from his play one.

They lost, the spent some time in prison. I don't know if they got the boy back or not.

I support the right of all citizens to own firearms. I support the responsibility of same citizens to use them in a very, very responsible manner.

Another minor bit of trivia. Seems the Thirty Years War (1618 in Bohemia to 1648 in the Low Countries) so decimated Northern Europe that warfare became stylized to keep the damage to a ladylike belch. The Brown Bess musket was used by the Royal Army for nearly a century.

So yes, people with hunting rifles hiding behind trees were a bit deadly. It was only with the Garrand that the average American infantryman was better armed than the average American deer hunter. Early in the Nam, a lot of guys sent home for their deer guns.

Part of the stylization was with artillery which was implicitly limited in numbers, size, and portability. Napoleon was an artilleryman and broke all the rules. He spent a few years blowing off everyone's shorts and had it done to him when they got to work in Essen and Newcastle. Military genius not.

But if people really wished to resist an occupying army, they would concentrate on three weapons: 1. A good sniper rifle that gave them a chance to fight another day. Some nice Mausers in the catalogs these

days. 2. A really good concealable pistole to stick in some clown's nose, and 3. A first-rate shotgun guaranteed to take the trim and half the wall when the door went down.

Odds are most Americans would need the shotgun to hit anything. Living along the Oregon Trail, I am always reminded that the biggest cause of death was gunshot wounds; pistol-eating and the effect of the yo-yo behind you having his blunderbuss on full-cock when he hit the bump.

Jim, I think there should be room for the old modes. Perhaps in some of the wider bands (heck, FM is permitted on 10), but that is for others to argue. Of course, one could play with lower power limits for some of the wide modes, but I'm not sure that would play too well either. One thing for sure, if the various modes were segregated, it might make life easier for all. Of course, during contests, all bets are off ;)

Jim, absolutely don't leave it for others to argue.

As a newcomer to amateur radio, I used to think that the long-timers knew what was best for the amateur service. Now after 15 years, I'm still a newcomer (in relative terms), but I make sure that the FCC hears from ME on any issue that warrants a comment period.

Imagine what would happen if only X (name your favorite rrap crank) commented and the FCC went with that comment.

Brian

Good deal. It'll also prep you with a little practice with kit building before tackling the K1.

>For
>all operation abroad, I chose the Patcomm PC-500. Here's the link.
>
>http://www.patcommradio.com/webdoc8.htm

Excellent choice, I completely overlooked Patcomm.

>Patcomm is also a local company and I believe in supporting the local
>infrastructure...if the product quality merits that support.

More people should try this approach. Perhaps they'd realize that the K Marts really aren't such a "bargain" in the long run after all.

>I
>remember when the PC-16000 first came out. After reading the reviews,
>I told my XYL that I'd prefer a Yaesu. But this looks like it's a
>bull's eye.

A little expensive for their intro rig and the PC-9000 also had its problems. They have a winner in the PC-500, as evidenced by their backlog.

>I took Larry's advice and chose 40 and 20-meters. The SST will be a
>30-meter model. (Less congested band.) The PC-500 is compact enough
>for me to travel with.

Sorry, I realized that I never even answered your question before. I concur with Larry, 20/40 is a good choice. If you check the Patcomm discussion group on Yahoo, you'll find that they're coming out with dual band modules too. It'll turn your dual bander into a quad bander. I don't generally like modules, but on a dual bander it's ok...not to mention all the extras you get with this rig. The rumored dual modules will be 40/30 and 20/17. I personally think 20/15

would be better. Here's a neat reference for you.

http://www.alltel.net/~johnshan/

http://www.hamuniverse.com/hfbands.html

The first one is affiliated with a NJ QRP group and offers some good tips on operating with just 5 watts. The second should give you a better idea on what to expect from the bands.

>Oak Hills Reasearch markets a "wall wart" power
>supply for QRP rigs that delivers 13.7V @ 2.4A...enough for approx. 5
>watts output. (But I'm still researching my options re. an adequate
>power supply.)

That sounds good. If you're no backpacking, perhaps a small switching power supply will do the trick. Samlex makes a nice 10 or 11 amp power supply that's light as a feather. The plug in "wall wart" along with a pair of Heil headphones/mic combos would take up the least amount of space though...and 5 watts is plenty.

>My aim was a nice portable rig, suitable for travel.
>The PC-500 just fit the bill

Sounds like you found the right choice for what you want, good deal. Call me when you want to start building that K1, Sierra, or OHR 500...it won't be long, you know.

>...and I got to support a fellow LI ham's
>business to boot. (I prefer "mom & pop" shops.)

Nice consideration. Makes the rig feel like even more of a value, huh? Although for $395, it's already a heck of a value. Take care and 73.

I disagree!

As N0IMD says, if we leave it for others to argue, we may not like what is decided.

Is AM on HF such a problem today that it needs to be restricted? I don't think so.

>Of course, one could play with lower power limits for some of the wide
>modes, but I'm not sure that would play too well either.

That's already been done.

The "old" (pre-1983) power limit was 1 kW input to the plate (or collector, or drain) of the stage(s) driving the antenna. Easy to measure with simple meters, and an incentive to efficiency. For the AM folks, it meant they could run 1 kW input 100% plate-modulated and get maybe 750 watts carrier and 3 kW PEP output (75% efficiency in the Class C final). Various supermodulation schemes could get you even more PEP.

Then the rules changed to "1500 W peak output" - which meant the AM folks could no longer run their kWs legally anymore, and efficiency didn't mean beans. The legal limit today for a plate modulated AM rig with 75% efficiency is 500 W (375 W carrier, 1500 W PEP).

>One thing for
>sure, if the various modes were segregated, it might make life easier for
>all.

The amateur HF AM crowd tends to hang out on a few well-known spot frequencies (3885 is the best known). Makes life simpler for everybody.

> Of course, during contests, all bets are off ;)

Not really. At least during the contests I work, the CW activity clusters at the low end.

The IP address is one of the fundamental properties of the internet. it allows you to identify yourself and who you are trying to communicate with. Some computers have static IP addy's, but many now have an address that is given to them when they log onto their ISP. Some are for one session, usual when using dial-up. Others, like myself are using a cable modem, and get an IP when they turn on their modem and computer. With a cable modem, you often leave the computer and modem connected to the web all the time. The ISP then might assign a new IP number every so often. I think my ISP reassigns a number every three hours or so. Sometimes I get little "burps" that I think are related to this.

Looking up your IP number is pretty simple. If you have a static address, you can of course look it up in the control panel. If you are using a temporary address on a LAN, you can run ipconfig program from the run feature on the start menu. If you are using a dialup you can use a service on the web such a Jim noted.

Now, the IP address is certainly not an exciting thing in itself, but it is a fundamental part of the whole process. You could probably get by with never knowing the thing, but when dealing with problems, it can help a lot.

You made note of possibly getting a cable modem. I have to warn you that cable modem land is kind of like the yellow brick road to OZ. It's wonderful, but there are a lot of dangers out there. Protection for the computer is mandatory. If you are interested, I can go over some of the things you will need. On list is fine, a lot of users should know this stuff also.

The Morse Code portion of the ARS does not reflect any technical
knowledge. I have seen a number of people who do very well indeed on the
Morse code test, but not so well on the written test. On the other hand,
I struggled with CW.

Now that being said, I still believe that there is great worth in the
Morse code test. It is a fundamental part of amateur radio IMO.

>What is a $20 gold piece worth today?

It ranges between $500 and $85,000 USD based on today's CPI.
The large range is due to the wide range in numismatic values of
different gold coins available today.

>It also gives invaders a disincentive.

I'd say a physical invasion of the homeland is a pretty remote threat,
but you're right -- 100 million-plus armed and highly pissed-off (I hope!)
citizens would be not be a very welcoming thought for a potential
invading army. Even if they nuked the big cities and military installations,
they'd still have to deal with a by then not-so-well-regulated militia of
hungry, sick, economically ruined, and incredibly angry UmurriKans
who are looking to pop some nice ripe Commie Pinko gourds. In fact,
it is the advance guard of the invaders, in the guise of the Liberal Democrats,
who are trying to disarm us so that they won't have that problem in the
future. Think about it.

>Harder to occupy us if many citizens
>are ambushing your troops. Probably not so important today, but back
>in the old days before long range bombers and nuke bombs and cruise
>missiles it probably helped some. Heard that the British had big problems
>with snipers hiding behind trees and such picking off redcoats back in the
>Revolutionary War. And we'd try for the officers too.

Well, if that terrible day ever comes, I'm more than ready to dispatch
the officer of some invading force from behind a sturdy oak tree in
some forest. Or from the window of my bombed-out apartment buiding --
assuming I'm not bombed myself at the moment!

>Does FISTS have numbers? Certainly. Do people give out FISTS numbers?

Yes, FISTS do have numbers, and yes, we do give them out on the
air. The problem is, FISTS have too steenking many numbers. You have
your basic FISTS number (mine is 2008), your Century Club number (for
working 100 points: Domestic member, 1 pt.; DX member, 2 pts.; Club
station, 3 pts.), and Gold, Diamond, and Platinum numbers for higher
levels of the Century Award. It is when you get beyond the basic
Century Award that it gets boring to have to sit thru all the numbers during
each QSO.

>Dunno. If they did would Larry give up CW?

No, he wouldn't, but he gets tired of the FISTS paper-chasers, that's
for sure!

That may be nice, but earlier in the thread or elsewhere here, how many
manufacturers are making a single band rig like this? I don't care for
paying $1000-3000 for just one band.

Again, this is alot of money to pay for just one band, let alone multiple
bands.

Those are examples of other numbers for which there is no need and which
I have gotten along fine without. I've had plenty of positive
experiences without any of the three.

> Does FISTS have numbers? Certainly. Do people give out FISTS numbers?

I believe they do have them and give them out. Yet another example of a
useless number which I've done fine without. I'm still have positive
experiences.

> Dunno. If they did would Larry give up CW?

Ask Larry.

Hi Brian,
As Phil points out, the collective opinions and comments from the unwashed masses of FCC regulated users does not mean squat. Apparently, only the wishes of the ARRL BoD and the Newington Crowd are important in FCC policy making regarding amateur radio.

The subband regulation by mode goes something like this:

% of given subbband allocated to mode = (mode bandwidth / subband width) x 100

The narrower the bandwidth of the mode- the less % of the subband allocated.

Eventually darwinian forces would eliminate all modes except spread spectrum.

However, along the way, there would be some interesting times, particulary when voice width and wider data modes are dumped on top of voice SSB.

73,
Clay N4AOX

I never said I wouldn't work Larry, but without a key QSYing to CW would
be a bit tricky. My news server tells me my IP number when I log on, then
I forget it five seconds later.

OK, so you maybe you do get it, but you seem to be saying some variation
of two things, either:

1) I did it (CW testing), so everyone should have to; or
2) You have to develop an interest in CW, if you didn't like it before.

I don't think this stands up. On the first point, I did it, and don't
think others should have to. On the second point, lots of people are
interested in radio, but not in CW, and I just don't see why they have to
get interested in CW. Perhaps it's so you can have someone to work? Is
that the real reason?

I always understood that the dollar as a unit of currency came from some Spanish coins that were in circulation at the time, and which were used by some as a sort of alternative currency in the colonies. If that was really written before the US dollar, then it must be the Spanish coins, which I think were the same as 'pieces of eight' that were meant. There again, I have no idea where I read about that!

They issued them to hams in Alaska, Hawaii, and U.S. Possessions. And that little
give a fake address to the FCC scheme Burke talks about hasn't gone unnoticed by
the FCC.

>but the FCC ran out of the style of 2x2 calls that techs and

That's right. When I first got my license in 1998, I had a 2x3 callsign.
Then I changed it sequentially to a 2x2 after I passed my Extra in 2002.

Yup, give that man a ceegar. In fact the Spanish Milled Dollar (Thaler)
or 'piece of eight' was so plentiful we really minted our first silver
dollar more for the pride than the necessity. It is also why we have a
quarter-dollar in a decimal currency (which the Treasury spent the 19th
Century trying to stomp out) and call it 'two-bits'. Our monetary history
is fasicinating.

This definition came out of the old Confederation Congress which kind of
got bad-rapped in the history books. They had trouble with small things
but handled the large stuff pretty well. The best example is the
Northwest Territories Act, or why the U.S. west of the Alleghenies is
surveyed in 6x6 mile townships with provision made for public education.
Yes, I know Ohio is 5x5 but the education came late (read never) and they
ran out of fingers. They also got a National Road to French Lick IN, more
or less the current US 50.

Perhaps it should have, at the very least, a partial role in
rulemaking. If I remember correctly, isn't our gov't "for the people,
by the people, and of the people," or something to that effect. I
understand from whom your bread was buttered, Phil...but surely it's
not unreasonable to expect the "will of the people" to have an affect
on rulemaking. Even for such an autonymous branch of the gov't as the
FCC.

I have to admit it. The K1 IS already submitted to my XYL as a
Christmas present request. I do like the Wilderness Sierra and don't
mind changing modules...but the K1 looks so damn good. :-)

Yeah, I just have to apply myself and learn to use a paddle/keyer as
well as kick my code copy into high gear.

> >I took Larry's advice and chose 40 and 20-meters. The SST will be a

You'll actually see a post by me asking about them. I think 20/40 will
be sufficient for my needs, but I could definitely live with 40, 30,
20, and 15. ;-)

> watts is plenty.

Well, my aim is this...I'm really not interested in QRP, it's just
that QRP gear is the type that's most suited for travel. I have plans
for one small carry-on to carry this rig, a power supply, a LDG QRP
auto-tuner, (The K1 offers an optional internal auto-tuner.) and a
wire antenna. Funny you should mention the Heil headset. I scoped a
few out and cheap they're NOT. I'd love to be able to go portable with
about 14 watts though. The final in this rig is rated at 70 watts so
as to be practically bullet-proof at 15 watts.

> >My aim was a nice portable rig, suitable for travel.

Larry, had you ever been in the Army, some needle-nosed field grader would
see you copying all those numbers and say something like, "Good training,
Soldier!"

I'm thinking about catching a hop to Raimey and working the CQWW from there.
Is that far enough away?

Check with N2EY.

He claims to be quite good at scratching two bare wires together instead of using a key. Unless you hacked into your radio to solder the two wires into the keying circuit, your biggest expense would be the phono plug.

> ran out of fingers.

There are numerous survey systems at work in Ohio, the earliest is from
Cincinnati East to the Scioto River.

By the time the surveyors left Ohio, they has a system figured out. Of
course, anything East of Ohio is as screwed up as the Scioto/Mad River

valleys in Ohio.

They also got a National Road to French Lick IN, more
> or less the current US 50.

The "National Road" is Highway 40 in Ohio, Indiana, and Illinois, originating in Cumberland, Maryland and abruptly ending at Vandalia, Illinois. The railroads passed it by. That and the telegraph. Are we talking ancient communication modes again?

But lets look at 10FM. Why is FM OK there but not on other HF bands? Why don't we have a conprehensive review of the band/mode(bw)/power authorizations and bring them into alignment?

> >Of course, one could play with lower power limits for some of the wide

I hold more than one. I've never been asked for a DXCC number during a
QSO. I'd have to look at the certificates on the wall to tell you what
the numbers are. Why--do you know of an on-air activity which involves
exchanging DXCC numbers?

Dave K8MN

Oh but doncha know? AB8MQ a.k.a. Curtains Boy, wants us
to believe he holds not one, not two, but THREE college degrees!!!
hahahahahahahahah LOL! One wonders how much filth and
child pornography Roger included in his Master's thesis?

>But lets look at 10FM. Why is FM OK there but not on other HF bands?

You are mistaken. Check the regs.

Last time I looked, FM voice was allowed everywhere on the US amateur HF bands that AM and SSB are allowed - IF the deviation is adjusted so that the FM voice signal occupies the same bandwidth as an equivalent AM signal. Hams were using "NBFM" on the HF ham bands more than 50 years ago, and it's still legal.

The FM you hear on the top end of 10 meters is much wider than the equivalent AM signal. It's essentially the same as the FM you hear on VHF/UHF. 10 is so wide that there's room for it. They put the allocation at the top to keep WBFM away from SSB at the low end, and to make the use of converted "low-band" (30-50 MHz) land mobile FM rigs easier.

Those wheels turn slowly. Remember how long it took FCC to decide "three
license classes open to new applicants, one codetest speed"?

Haven't heard a peep from FCC about the 160 m petition, nor the "Novice band
refarming" thing.

Dave, I was just wondering if it were another useless number. You say
you've never used it on the air, but what about off the air? Have you ever
had to give it out for anything at all? a loan application? a room
reservation?

>Apparently,
>only the wishes of the ARRL BoD and the Newington Crowd are important in FCC
>policy making regarding amateur radio.

Really? Let's take a look at what the ARRL BoD wanted for 98-143 (restructuring) and what the FCC actually did:

BoD: Allow Techs to use Morse on HF without a code test.
FCC: Denied

BoD: Give existing Novices and Tech Pluses instant upgrade to General.
FCC: Denied

BoD: "Refarm" existing Novice/Tech Plus subbands to 'phone.
FCC: Denied

BoD: Better written tests.
FCC: Denied. Number of tests reduced from 5 to 3, total questions reduced from 185 to 120. (more than 1/3)

BoD: Four classes of license, no legacy classes.
FCC: Three classes of license open to all, two classes closed to new licenses, one class that's not a class (Tech with HF)

BoD: Two code test speeds (5 and 12 wpm)
FCC: One code test speed (5 wpm)

Looks like the FCC either denied a BoD idea, or adopted it and went even farther than the BoD requested.

>do with imparting any knowledge of radio operation or theory?

Brian:

Whom ever claimed that operating CW imparts knowledge of radio
operation or theory? Most intelligent, knowledgeable hams understand
that there is a difference between knowledge of operational communicative
skills (such as Morse code) and the technical aspects of radio theory.
Of course, all communicative skills ultimately depend on the technical
knowledge. Us CW operators understand that, and do not consider the
two forms of knowledge to be anything but inseparably related to each
other.

If you don't know the Morse code, you cannot employ one of amateur
radio's most effective communication modes. This alone is reason enough
to require the acquisition of this knowledge.

Nope. That's the wonderful thing about it. I don't have to retain it
in memory or use it for anything at all. I don't know of anyone who
"collects" DXCC numbers and I don't believe there are any awards for
amassing a quantity of DXCC numbers. It's the kind of number I can live
with.

You should already know all of this. You're a DXer--right?

There is no voodoo or magic associated with RF
propagation. There are several perfectly sound
technical reasons why it is beneficial to occasionally
sacrifice a goat in your antenna field.

3542. Forgive them, for they know not what they do!

KB4PGC, a Virginia amateur apparently educated far beyond his intelligence level, is proposing (RM-10521) that NON-LICENSED citizens from the UK who are visiting in the US should be allowed use of the 70cm amateur band for personal communications, similar to our FRS service. The primary premise of his proposal is that these foreigners are bringing their "PMR 446" radios to our shores and using them illegally anyhow, so we might as well just make this "UHF Freebanding" legal.

Gimme a break! Horseshoe7 must love this guy.

Following is a verbatim excerpt of an FCC letter, dated August 9, 2002 from the FCC to lawyers representing Reliant Energy, a Texas power utility.

"Your interpretation of Reliant's obligation with respect to the Amateur Radio Service is that Amateur stations are not part of any "service", and that the obligation to avoid interference to a "radiocommunication service" does not include Amateur Radio stations, since individual Amateur Radio stations constitute a "use" but not a "service".

The attempted distinction is baseless. The Amateur Service is "a radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs; that is, duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest." 47 C.F.R. &#65533;97.3(a)(5). Individual licensed stations are each part of this Service."

Yes Dave, I know this. That's why you could have just said I was being
silly, and have been right.

Mike, a bucket of bits harly weights more than the bucket itself. It all
depends on atmospheric pressure and humidity.

Then you can no longer claim that there is not a meaningful exam for the
amateur radio service.

Ryan,

The RCI-5054 is a good deal for an all-mode rig on 6, and as others point out its among the very few choices for a single-bander. At the time I bought my first 6 meter radio the only reasonably priced choice was the Yaesu FT-690, now discontinued. And that rig doesn't have AM. If Ranger had been producing the 5054 four years ago I would have bought it in an instant. It appears RCI is trying to rehabilitate its image somewhat with their new 10/12 meter rigs. They're advertising in QST for those and for the 5054, and I believe I read that the 10/12 rigs are difficult (if not impossible) to modify for 11 meters. Also if I remember correctly the original RCI-2950 has been discontinued.

Goat? Naaw. Lamb. Preferably a nice, young, fluffy, tender one, ripped right out of the arms of a 5-year old girl at the local petting zoo. Lash it upside down to the tower, place a bucket under it's head, and slash the jugular quick and deep. As soon as the bleating stops, the deceased should then be honorably butchered, and roasted over a very slow fire and consumed with ample quantities of mint jelly. Correct observance of this ritual will reduce your SWR on all bands.

Well, Brian, I don't recall making that claim, either. The present requirements
for code testing have been dumbed-down, but the theory/written portions are /_marginally_/ "meaningful" in your sense of the word. I would also prefer some
kind of "hands on" practical test, such as being shown to a workbench set up at the test site, and be required to assemble a simple circuit such as a one IC transmitter, using a fairly standard schematic and cheap, readily-available components. Then the student could take a table full of typical station components (transceiver, power supply, TNC, PC, antenna tuner, antenna (coax lead in) and ground, and hook the up into an on-the-spot functional station. For extra credit, he/she could plug in a CW key or fire up the computer and make a non-voice QSO right there on the spot.
A voice QSO would count for zero points (just to annoy you!).

"The will of the people" and competent technical/legal knowledge
are not necessarily the same.

I'm having a real knock-dowm micturition contest in a broadcast
related newsgroup with a colleague whom I have known for 20+ years
and who is probably the number one broadcast audio equipment design
engineer in the country over whether interference proofing consumer
electronic equipment at the design stage is in the public interest or
not.

Don't get me wrong - there are two Petitions that I have submitted on
behalf of clients in non-ham radio matters that were shot down.
Being known at the FCC does not guarantee results.

The train seems to have a mind of its own......

For casual operating, roundtables, and similar operating I find it very
natural and convenient. About the only time I'd don't use it is during
contests, or when I have company in the shack. I also use full-break-in
("QSK") for most of my Morse operation.

I have had a hard time finding a VOX circuit tat worked the way I think it should (on voice), so I just use PTT.

I usually use full break-in on CW, and it's great in most cases. My Yaesu FT757GX will clip characters, however, when I get over 15 or 20 WPM, so I will kick in delay of a second or so.

Not much there to argue with, tho I would note that sometimes the
crooks do wear bulletproof vests, ala the LA bank banditios some time
back who also had machine guns and had the cops serverely outgunned.
Said cops had to go to local gun stores to grab up weaponry of the same
'caliber' with which to defend against the thugs.

Problem is, NRA is the only game in town. Just abandoning ship is to
toss in the towel to the idiots who believe that no one deserves to
defend himself.

I imagine you are aware that the Supreme Court has long ago adjudicated that the police have no duty to defend individuals from acts of crime. only society in general. History is loaded with victims who pleaded with police to stop their murder from happening who found a deaf ear. No crime, no action. But don't you dare go trying to keep them from you on your own. The police are reactive, not proactive, and that is as it must generally be. Doesn't do much for your personal defense, though. Somewhere in my archives I have the references to support all that but I don't know where they are and I don't intend to hunt for them.

>
>Sounds good. Makes sense, too.

Well, there you have it.

NBFM voice is great from the standpoint of transmitter simplicity. But its performance compared to an AM rig of the same power is dismal. Conventional AM has about a 6 dB advantage.

>> >Why
>> >don't we have a conprehensive review of the band/mode(bw)/power

>>
>> Into alignment with what?

>Such as, is there room for wider modes on 15M, 160M?

Depends on what you mean by "wider". Typical amateur FM voice (not NBFM) is about 15 kHz wide. Or more.

The next couple of years are going to be very interesting. FCC will probably drop Element 1 like a hot potato in less than a year. Will that cause a surge in the number of hams, or the number of hams on HF? Maybe.

Sunspots will decline and the days of easy DX above 10 MHz will be few and far between. hams will probably get 60 meters at some point, taking some of the pressure off 40 and 80 during the sunspot low.

And those are just the high points.

Watusi:

VOX is definitely useful on CW; but it is VERY annoying on phone -- like just about every other aspect of phone operation! The most difficult thing a phone operator has to learn is how to coordinate the action of their mouths with a PTT switch, but unfortunately, a lot of them can't even get THAT right! Often heard on local repeaters are fast-talking idiots that manage to get the last two-and-a-half letters of their call sign out over the repeater. Of course, we also have an Extra who is an SSB contester who does the same thing! One time when I went back to him by saying "1K this is K3LT how are you today?" he actually, quite sheepishly, claimed to still be in "contest mode." Kind of a unusual thing to do when using a 2-meter repeater, isn't it? Of course, he's also a phenominal CW operator, so it just goes to show you that it is PHONE operation that drags the LID out in all of us! Except me. When I (rarely) operate phone, I seem to have no problem managing to key up my transmitter fully before speaking, using standard ICAO phonetics (as opposed to Albert Boston Chicago Denmark Easy Paraguay Sugar London Tokyo Yokahama Zanzibar), and speaking slowly and clearly enough for people to understand what I'm saying on the first transmission. The phone lids, however, go for style over substance, and prefer to put on a display which imitates a TV/Movie cop/fireman type whipping a mic to his mouth, spewing a transmission at top speed, and then turning their face dramatically to the camera! For some of them, VOX may even be an improvement, but since it seems to be technically impossible for anyone to set up a VOX correctly, I don't advise it!

Uh, knock-knock, hello in there! Not to sensationalize the issue, but a
physical invasion of the homeland happened at least on one occasion already:
September 11, 2001.

>
> 100 million-plus armed and highly pissed-off (I hope!)

Uh, knock-knock, hello in there! Those thoughts and sentiments may be OK
when thinking it's going to take an invading army to rise the action of all
those "armed and highly pissed-off citizens." However, no matter how many
armed citizens there are, it is now a reality that everyone should realize:
a) it doesn't necessarily take an "army" to invade, b) it doesn't take much
more than a strike like one on September 11, 2001 to bring this country to
its knees [oh sure, we can yell all we want that nothing has changed and
we're freer than ever and...blah, blah, blah. But, late at night when it's
just you and your id, we all know it ain't so], and c) most of your
proverbial "armed citizens" are nothing much more than a bunch of wimps who
feel powerful shouting and flailing arms around. The minute it got serious,
I daresay more than half of them would turn tail and run.

Ya missed it, Larry. Look up "September 11, 2001" on a search engine, you can read all about it. Oh, and you don't have to worry about your sturdy oak tree. You didn't get to hide behind it; you didn't even need it.

Not at all. If I need to know what the number is, it is right there for
me to look at. I'm not encouraged or obligated to give it out during
contacts on any band nor does anyone test my patience by asking for my
DXCC number or by telling me their DXCC number.

You mean that fiasco that eventually became the restructuring? I'd say the
FCC has not so motivated nor conscientious public servants.

Probably not easily done such that every candidate at every VE session
would see the same level of difficulty. One could however show
several diagrams of station setups, all but one incorrect to the degree
that it can't work at all. Say a key connected to a linear and that
connects to a transceiver and then to a power plug to the powerline.
Silly one. Or a key to a transceiver that then feeds a TNC and then
a linear and then to the computer and then the antenna.

Well, it seems that the passengers on that 4th hijacked plane Sept 11th
fought with the terrorists to take the plane back. And apparently fought
with the terrorist pilots as the plane crashed in the middle of nowhere in
PA. I haven't heard any mention of any guns found at the crash site.
Which likely means the terrorists didn't have anything beyond box cutters.
I suspect the next time one of our planes gets hijacked the passengers
will assume it's a sucicide mission and fight the hijackers.

Well, the rig I bought used (TS440SAT) came with a mic
(electrovoice 636) without a PPT button, so I had to use
VOX. There's an adjustment to null out the speaker to
reduce false triggering.

It might (but not necessarily in your case) be instructive to actually learn about the genesis of the FCC and it's mandate and functions. Most commissioners take their job seriously, though they rarely are technically well informed and must rely on staff for most of that advice. Not all are Reed Hundts on a singleminded mission.

Hey, young'un, you're in the game if you're still breathing. You don't know it, but lotsa 'someones' out there are making *all* the decisions for you, and if you sit in your corner and pout you don't even know who they are or what they're doing - for you or to you.

Excellent point, Robert!! Excellent point. The grand scheme that the gun-owners have dreamed up is simply that...a grand scheme. What are guns going to do against chemical warfare, nuclear warfare, mind games, stock market crashes, huge industry crumbles, etc., etc., etc.

As mighty Dick plays his game (reference to another thread/post), the rest of us who have a clue are preparing, ready, and trying to figure out what can *really* be done in the new world. Being prepared to risk one's own personal life--regardless of weapon or hiding capability--is what we all must think about. What *would* you--all by yourself--be willing/capable of doing? Forget the armies--they landed years ago. While the mighty Dicks were playing their game, the armies landed and have entrenched themselves.

Excellent point, Robert.

I don't plan on using it that much. The QRP rig has it and when I
travel, I plan on using headphones...so I figure I might as well make
it a headset and kill two birds with one stone. That way, I don't have
to lug a mic along if I use a BM-10.

Larry
Your one heck of an operator! You said you went back to him
on a 2 meter repeater? I thought you once said that your radio
didn't have a microphone hooked up to it, because you didn't do
phone at all.

That's quite a trick using CW on a 2 meter repeater. ;^)

Who cares? Lennie long lost any credibilty or usefulness to Amateur Radio as soon as his "I am against the code test" postings became a forum for "Hail to Me For I Am A PROFESSIONAL" rantings.

His two-faced rants are now legend. His self-promoting rhetoric have forever dulled anyone's willingness to "accept" him, regardless of the technical competence of his material. He will always be "Lennie", the antagonist, and ner'ly "Len", the "engineer". He did it to himself.

Lennie usually takes one of these hiatus when he's been getting his own rhetoric and misdeeds fed back to him. Not even Brian Burke could feed his ego fast enough to pad him against the bruisings he was taking from everyone else. But like I said...he does it to himself. He get's no less than what he deserves.

But don't worry...I am sure he'll be back for more. He'll reinsert himself just when you think it's safe to go back into the water....

Isn't "VOX" "voice operated xmit"? I think you mean the function that
keeps the receiver switched off the antenna between key downs while
you are pounding out code on the key.

I don't think I ever had that problem except for a short learning curve.
Or if I just got done using my VOX operated HF rig and get on the
2m HT I might start talking expecting VOX instead of PTT. But that
is noticed rather quickly and thus easily corrected.

Sometimes when on HF SSB on a 100W transceiver working some
DX, I get back "Sierra Tango" for my callsign ending in "Sierra Echo"
I then try "Italy Sugar Europe" which sometimes works. Maybe I have
the speech processor misconfigured.

> The
> phone lids, however, go for style over substance

At least the worst ham LID is still better than the clowns on
CB with their echo boxes and roger beeps. Seems the CBers

are just broadcasting instead of QSOing a 2 way comm.

Roger does not want you to see the true versions of
his FCC spankings.
www.enforcement.actions.ue3113.xyacl.org

GLENDALE, WV: The FCC requested that Roger L. Wiseman, AB8MQ,
retake the General examination elements under the supervision of an ARRL-VEC
volunteer examiner team. Wiseman must appear for retesting by September 11,
2002, or his license will be canceled. Applicants appearing for
re-examination
are granted an Amateur Radio license consistent with the elements passed.
The
FCC had written Wiseman on March 29, 2002, advising that it had been made
aware
of "an ongoing personal dispute" between Wiseman and another licensee that
included allegations of interference or jamming on 20 meters. FCC Special
Counsel for Amateur Radio Enforcement Riley Hollingsworth invited the two
licensees to contact him to discuss the matter. Additionally, the FCC had
sent
Wiseman a Warning Notice last November in response to allegations of
deliberate
and malicious interference on 20 meters.

Congratulations, Hans. You are the second person to receive a round of applause for humanitarian kindness today.

>Life is just a journey between two eternities, and it's a journey far to
>short to carry the hate that you seem to treasure and nurture.

I don't "hate" Lennie, Hans. I am sure that under different circumstances that we'd probably even be friends as we share a great may common interests. However I do not tolerate ignorance or antagonism, and he has exhibited both in spades. He further does so while alleging to be "well educated" and a "professional engineer".

He had great potential and has squandered it. I am sure he lives comfortably in his retirement now, but what does he do with it? He spends a great amount of it "here" lecturing about things he has only sideline knowledge about. How sad.

We should be realistic. I note some radio show is about to be popped the the FCC. Seems they had contests as to who would have sex in the most dangerous places. Hmmm....so three people (one with a cell phone reporting on the activities of the other two) get caught in St. Patrick's Cathedral in New York. From the article, the FCC has been been blitzed by e-mail and telephone from a lot of (justifiably) angry folks in the big apple. Everyone fighting over microwave frequencies. Cell phone towers. My guess is that amateur radio is not near the top of priorities with the FCC. Just a guess, but I suspect they'd like to see us truely self-police and keep a nice, QUIET, low profile. I hope we don't become a pain three feet below the neck to the FCC.

True enough. There is no question that the fellow is intelligent and does indeed have some knowledge. But that nasty line seems to be crossed way too often. It's his choice.

That's certainly not my position. I am 100% in favor of
ending all code testing.

> 2) You have to develop an interest in CW, if you didn't like it before.

Nope...what I have said is that those people (Larry, et al) who
want to see morse code continue as a practiced mode by hams
will have to "market" the mode to new hams to gain additional
devotees to continue using code. I noted, in response to
Larry's comment, that while some new hams come with a preconcieved
dislike of code, there are others that don't have such a dislike...and
it is those others who CW devotees should target to try and get
some of them to learn and use code.

> I don't think this stands up. On the first point, I did it, and don't
> think others should have to.

I agree completely.

> On the second point, lots of people are
> interested in radio, but not in CW, and I just don't see why they have to
> get interested in CW.

They don't...I have only offered a rational that will
have to be followed by the "PCTA" if they want
code use to continue after code testing ends.

> Perhaps it's so you can have someone to work? Is
> that the real reason?

That's certainly Larry's mindset (IMHO). Since I
rarely operate code, it makes no difference to me.

But there are still plenty of horses that DO drink when lead
to the water.

IF code falls into total disuse, consider yourself part of
the reason why IF you fail to become a proponent of the mode
to newcomers.

Funny...no one I know has been forcefed into doing their
own antique car maintenence, even when they can easily afford
to pay others to do so. Nope, they learned to enjoy it from
others even though there's NO mandatory requirements to
do so.

Dick,

Those that wish to avoid the political process are the ones
that allow the politicians to reign supreme. I got involved
in local town politics because I was dead set against where
my town government was going on certain issues. That's
the way it works. The alternatives are either dictatorships
or anarchy. Being an informend citizen takes work. Those
that don't do the work will piss and moan about the decisions
their elected officials (the politicians) make.

Cheers,
Been there, done that!

Mine's hooked into a dial-up modem ;)

It probably more depends upon the operating system. Here it's a Win98 system. My NT system did not even have that executable but I think that is more a network configuration restraint than a OS. Don't know about the Linux, WinME, etc. The winipcfg.exe probably also won't work through a firewall, guarded network, etc.

Bill: an observation. There are true politcs. Then, there are political games. Political games are not to be played, bought into, used for gain, ignored for gain, etc. True politics, to which you speak above, is not a game.

Bill:

I was discussing a QSO that took place on a 2-meter repeater, so
yes, I did "go back" to him on a 2-meter repeater! I don't usually
use 40-meter RTTY to hold up my end of a 2-meter FM repeater
QSO!

BTW -- free clue -- it's my HF rig that doesn't have a microphone
attached. I use VHF/UHF FM and SSB voice on a routine basis.

>That's quite a trick using CW on a 2 meter repeater. ;^)

I've been known to do that as well, Bill! Are you going to claim
that using CW on a 2-meter repeater is not technically possible,
legally authorized, or an acceptable amateur operational practice?
If so, please, by all means, be my guest! It will be a most amusing
thread!

>
>Isn't "VOX" "voice operated xmit"?

Correct, Bob. It is also used in CW; you switch the VOX on, adjust the
gain and delay, and from then on, whenever you key down the transceiver
goes into transmit mode for the length of the transmission, plus the delay.
However, somehow, I think you already knew that.

>I think you mean the function that
>keeps the receiver switched off the antenna between key downs while
>you are pounding out code on the key.

What you just described is a TX/RX relay, which is controlled by the
VOX circuit when in use.

I could never the ham radio prejudice against "roger beeps." I think
they make perfect sense. Why do you suppose NASA uses them
for 100% of their voice comms?

>Seems the CBers
>are just broadcasting instead of QSOing a 2 way comm.

I would say the same thing about the typical 75-meter "roundtable." Everyone
takes turns broadcasting for up to a half hour at a crack, while everyone
else is going to the toilet, doing their dishes, walking the dog, reloading
their weekly pill containers, etc. etc.

More's the pity. If that aircrew, and/or some lawfully armed citizen
passengers *had* been armed at the time, perhaps the hijacking could
have been cancelled before it ever got to the point where the only to
prevent the aircraft from being used as a high-explosive, guided missile
was to deliberately drill it into the ground. As is usually the case when
guns are present and in the hands of law-abiding citizens, many innocent
lives could have been saved.

>Which likely means the terrorists didn't have anything beyond box cutters.

Which armed aircrew or passengers could probably have stopped them
in their tracks without even firing a shot! If you're armed with a boxcutter
and I'm armed with a gun, what are you gonna do?

>I suspect the next time one of our planes gets hijacked the passengers
>will assume it's a sucicide mission and fight the hijackers.

I suspect you're right. Too bad our screwed-up society won't permit
them to be properly armed in order to be able to win that fight and
save innocent lives.

In what way *are* you prepared for this "new world," Kim?

>Being prepared to risk one's own
>personal life--regardless of weapon or hiding capability--is what we all
>must think about. What *would* you--all by yourself--be willing/capable of
>doing? Forget the armies--they landed years ago. While the mighty Dicks
>were playing their game, the armies landed and have entrenched themselves.

Ya know, I think Kim may have accidentally stumbled on something with a
faint ring of veracity. There has been an "invasion" of sorts -- an invasion
of
dangerous thought -- namely, liberal, socialist thought. It has created a
horribly dumbed-down educational system, a burdensome government which
creates and exploits dependant slaves in order to increase it's power and span
of control, and, apparently, it has created Kim.

I like the 5054, but am selling it due to the fact that I am never near the damned thing when there is a band opening. So far it works really great for the 40-70 mile local range, but I have not had the timing to be at the radio when propagation conditions occur....

Guess I will have to wait till later in life to really enjoy this hobby...

>

That kinda sums it up... I wouldn't mind working some DX from time to time, but for the most part, I would rather chat with people where there may actually be a snowball's chance in hell I might actually ever meet them in life. (Typical ham motto "I have tons of friends worldwide, none in my own backyard...")

On the other hand, if I am interested in taking a trip to a different country, I definitely would be interested in making on-the-air friendships, to eventually meet them when I get to make it there.

I understand the specific tendancies the CW operation does allow, but I cannot find any enjoyment in it. But as stated yet again, if the test is a requirement for the priviliges that it affords, I will comply, liking it or not.

Whether or not you do code or not is not as much as the issue, as the shitty attitudes that seem to come with it. You gonna go to a car lot and buy a vehicle if the salesperson treats ya like shit? Basically I guess you could call it "grumpy old man syndrome."

>

>

I have the CSCE for 5 wpm, and also the general class CSCE, but have not seen any use for it based on my specific conditions at this point. Actually I need to submit those before the end of the month or they expire.

> You no longer have a progressive, incentivized licensing structure to

Again, if *you* (proverbially speaking with the words with * around them) want me to participate in something *you* hold dear, treating *me* like feces is not the way to get me to do something that is considered an elective, not a requirement in life as hobbies are.

> If you can learn to relax and enjoy the Morse code, you won't believe how
> much easier it comes to you! Like I said, *I* know you can do it. Now,

I keep hearing oriental guys on my freeband calling frequency of 27.555. Both my friend in San ANgelo and myself here in Galveston beam them best to the south west. Anyway I wonder is there any way to call the FCC on them as they are messing up my comms.

The plane may have been too low before someone who knew something
about flying even a general aviation aircraft could pull it out of a dive.
I've heard that commercial planes could be landed using an autopilot,
but I don't know if that's true or not. Someone on the ground would have to
walk thru the procedure with whoever is at the controls what switches to throw
to enable it.

> >Which likely means the terrorists didn't have anything beyond box cutters.
>

> and I'm armed with a gun, what are you gonna do?

Kinda like that scene in one of the "Indiana Jones" movies, where a local
is menacing with knives and Indiana whips out a gun and shoots him about
10 meters away. But I'm not sure if firing a gun is such a great idea aboard
a pressurized aircraft as the bullet might puncture the fuselage. But I'd
risk that to avoid a hijacking....

No, he just keys the key so fast it actually creates a digital* voice stream
that
the rig circuits are tricked into converting it to analog voice and
transmits it as FM. :-) *Pulse width modulation....

>
>
> I've been known to do that as well, Bill! Are you going to claim

There's even a 2-meter subband exclusively for CW. 144.0 to 144.1MHz.
And no-code techs could do code on it, AFAIK. Well, assuming they're
learning some code..... Maybe a local ham club could set up code
practice sessions and lessons using that CW subband and a simplex
FM frequency. Of course after each student's 2-meter rig is configured
to do code. It would same some time and trouble getting everyone
physically together at some borrowed meeting hall. And the students
could practice actual CW QSOs over the radio, thus learning some
operating skills. Though 2-meters is not HF, but still valuable.

I'll have to check it with a ham friend who lives about a half mile from my QTH. Using a band with dead propagation at the time we do it. Like 75 during the day, or 10 at night. So we avoid QRMing others we happen to not hear.

I don't think it's grossly wrong, but it might need to be tweaked. Also the mic gain.

Yes there is just write to this address

Riley Hollingsworth c/o
Federal Communications Commission
445 12th Street, SW
Washington, DC 20554

Make sure you tell him your names and
addresses (you and your friend), the
frequency you use, and all the rest of
the story just like you did for us. I will
bet that Riley will be very interested in
your problem.

Using morse code on a repeater is legal as well as all the other things
you mentioned above. I just said that it would be quite a trick to do

it on a repeater.

If your trying to turn a little good natured teasing into a big blown
up fight about the use of CW, you won't get it here from me.

Not worth the energy.

> I am sure that under different circumstances
> that we'd probably even be friends as we share a great may common interests.

Amateur radio isn't one of them.

> However I do not tolerate ignorance or antagonism, and he has exhibited both > in spades.
He further does so while alleging to be "well educated" and a
> "professional engineer".

He thinks that Amazon is a profitable company. Connect the dots,
Steve.

It should be clear by now that his game is to incite others to behave
in ways that are embarrassing to the ARS. Also to incite dissension
and antagonism between hams.

Most of all, time spent arguing with him on Usenet is time not spent
on the air or on other amateur-radio-related activities. It's not even
time spent discussing amateur radio policy issues.
>
> He had great potential and has squandered it.

How do you know? In the years you've been reading his posts, exactly
how much real, usable knowledge and information have you seen him post
here? Was any of it not easily obtained from other sources?

Anybody can play the cut and paste game. W3RV gave an excellent demo
with the TTY stuff.

> I am sure he lives
> comfortably in his retirement now, but what does he do with it? He spends a
> great amount of it "here" lecturing about things he has only sideline

> knowledge about.

That's his choice.

Arguing with him only encourages the behavior. Behaving the way he does only lowers you to his level.

> How sad.

That's NMP - Not My Problem. NYP, either.

--

btw, the statement Hans used to start this thread came from an interesting source.

FCC has gone after an electric utility whose equipment (allegedly a 250 kVA transformer) is causing harmful interference to a ham. The utility has tried all kinds of evasions to get out of spending time and money to fix the problem. One claim was that hams are not entitled to such protection, same as Part 95 folks. Another tactic was to offer to relocate the offending transformer - at the ham's expense!

The FCC, notably Riley Hollingsworth, have not been swayed by these tactics and are forcing the utility to fix their problem at their own expense. FCC's position is essentially that the utility is in a Part 15 situation, and must not cause the harmful interference. It's an enforcement issue to the FCC.

Go Riley!

http://www.ccfj.net/twinrivers.htm

Although the above site doesn't specifically name antennas, it does
show how invasive the HOA rules can be.

>backyard...")

Soooo...??? When was the last time YOU took the initiative to head down to the local radio club meeting? Still waiting on that engraved invitation? Sit in on any of the seminars at a hamfest? Have you inquired of any of the local contesters if you could tag along next multi-multi operation? How about Field Day or the ARES activities?

How about putting out a "QST" on the local repeater to get a couple guys or gals together to arrange an ARISS contact at the local middle school?

There are about 3 million ways to get "interactive" with your neigborhood hams, but if you're waiting for the courtesy van to pull up to the front door and escort you to your seat, you may be a bit disappointed.

Don't wait for them. Take the initiaitve.

I've got the wire, 70' of black insulated 14ga house wire, and the have
wound 18ga insulated wire around the outside of a plastic 35mm film
cannister. I don't have the capacitor yet. I'm also waiting for my older
son to get the cast off his arm so he can help me on the roof - about 2 or 3
more weeks.

I like my Heil headset. My wife got it for me from K9EID at his factory in
Marissa Illinois when we lived in Belleville. I used the foot switch, but
found if I mounted to the side of the desk easier to switch with my knee
than my foot. I hated having my foot poised above the footswitch - got
tiring after a while.

VOX would avoid all that but.... I like hard switching.

Have fun.

Yup. I have my old Second 'Phone up on the office wall, next to the diplomas and similar things. I did not get into anything that required a commercial radio license so I just let it lapse.

Sure wish I'd asked ofr one of those fancy Extra certificates back when the FCC gave 'em out.

>> >I took the

Right place right time. Back in 1968-70 it was $9 each time you went to the FCC office, pass or fail. Not cheap to a high school kid when minimum wage was around $1. Equates to maybe $40-50 in today's money.

But hey, Tastykakes were three for a quarter once, too.

Again... if there was any focus, I may consider it. Allegedly the ARRL
praises their "field organization." Where are they? I am a member of 5
different clubs in 3 counties.

>

See... there ya go pulling a "Larry" or a "Dick" and prejudging... As stated above I am a member of 5 different clubs. I am a position holder with one in fact. I am also on the committe responsible for the Midland Hamfest which is the third largest hamfest in the state of Michigan, and we are striving to make it the 2nd or 1st largest if we can. I have pursued the concept of getting the club members to participate in some of the many available contests out there but have not had alot of luck there. I participate and am active in my own counties ARES activities and also assist in two other counties. In fact for our own county, I am on the tail end of a project to equip all of the fire stations within my county (15 of them) with a 2 meter set-up to act as a backup network, if our Central Dispatch radio system goes down, which it actually has 2 times this year. I am working on the grant processes to get the whole thing paid for. I also maintain a "email reflector" of sorts for the mid-Michigan area also. The original statement was referring to getting know hams locally and then working outward.

> How about putting out a "QST" on the local repeater to get a couple guys
> or gals together to arrange an ARISS contact at the local middle school?

Again.... there seems to be a lethargy around this area. I have tried to arrrange and most likely am usually the only one getting involved with such projects as getting into schools, malls etc. Still trying to figure out what the hell is gonna raise these people out of the "funk" that seems to be around this area.

>
> There are about 3 million ways to get "interactive" with your neigborhood
> hams, but if you're waiting for the courtesy van to pull up to the front door
> and escort you to your seat, you may be a bit disappointed.
>

Yep... and I am either trying some of those 3 million ways or currently doing them. Never said I was waiting for a courtesy van or some other snotty comment. The whole thing was pointing out other hams I have personally observed. Great... He can talk with hams or tap-tap-tap with other hams around the world, establish friendships etc. but cannot even interact with his/her own local area hams. God forbid they may actually have to break away from hiding behind a microphone or a key.

> Don't wait for them. Take the initiaitve.

Don't prejudge. Get to know, not make assumptions.

Have a great weekend.

>in their tracks without even firing a shot!

I can't help but wonder if some of the folks thought about fighting back
but were worried about what thier "legal" consequences might have been had the
circumstances been different?

>>I suspect the next time one of our planes gets hijacked the passengers
>>will assume it's a sucicide mission and fight the hijackers.
>
>I suspect you're right. Too bad our screwed-up society won't permit
>them to be properly armed in order to be able to win that fight and
>save innocent lives.

I remember the case a few years ago where a young man "went beserk" on a
flight and the passengers subdued him. However he died as a result of the
scuffle and it wound up the "topic du jour" on "Montel", "Oprah", etc etc...

I wonder how many people thought about that and decided they would just
wait and see what happened rather than be harrassed by the daytime talk pukes?

>But I'm not sure if firing a gun is such a great idea aboard
>a pressurized aircraft as the bullet might puncture the fuselage. But I'd
>risk that to avoid a hijacking.

Firing a weapon is one thing. Firing the RIGHT weapon and hitting what you aim at is another.

While I support the "armed citizen" concept, having them armed on a pressurized aircraft is another matter. You'd have no control over WHAT weapons were on board the aircraft nor of the qualifications of the person carrying it. The wrong weapon can be as dangerous to the passengers as no weapon at all.

For those with no CQB (close quarters battle) training, the cabin of an aircraft is NOT the place to be "packing". I dare say that I am a bit more qualified than some others in this forum in such matters, but even I would leave my weapon in checked baggage, even if it were legal for me to carry it aboard. There are alternatives that are as equally lethal for the terrorist and less likely to harm the other passengers if you know how to use them.

(K3LT)>Too bad our screwed-up society won't permit
>> them to be properly armed in order to be able to win that fight and
>> save innocent lives.

What's even more screwy is that one of these days a Sky Marshal is going to successfully cap a hijacker in the act and then some liberal coward will file a lawsuit claiming damages for the emotional trauma of having had to witness the act. Then the NEXT Sky Marshal or proactive citizen will hesitate the next time it happens to THEM.

Source record: 51407

please explain to me what the front lines for recruiting new hams are. i say there is none because recruition is almost zero. if there was one it would only be the 11 meter freeband. most other countries unofficially use it for this anyways. freeband harmful? prove that it harms anything other than a mars cap channel or two that were poorly chosen.
i've been dx'ing since the age of 12 and have seen alot of good foriegn dx'ers end up in alot of trouble. our fcc doesnt even exist when compared to some of the european radio police(thats right they have RADIO POLICE and not the friendly FCC field officers). we are a couple dxcc's away from having 300 activated on the freeband with no sign of stopping yet. take a look at www.alfa-tango.com www.irdx.org and www.dxnews.de or www.cluster.dk and look under some of the past activations. why is it so hard to understand a amp dead keying 50 watts and swinging 600? have you seen how standard radios perform after NPC mods? have you ever used a class c amp as a AM modulator? remember SCAM? have you ever taken a ab biased amp and driven it so low on AM that it dead keys almost nothing (lower than the actual input wattage) but swings near full output peak power? hese are just a couple of the times when its very common for a cb'er to have a low dead key and a high pep output with a amp!
this was very common and done purposely to save the sweep tubes and go easy on the transformer. tune thru the cb band and youll see a lot of AM signals that resemble a look more like a ssb signal would on the s meter. how incorrect or correct it may be i dont care but its far from uncommon or impossible.

I believe Patcomm is coming out with two dual band boards, a 40/30 and
a 20/17. I think picking these up is a no-brainer, although I do
believe that a 20/15 board would be better.

> Power supply: http://www.astroncorp.com/

> Not feathers but tough as nails and 100% quiet. Big shop. $81 at HRO.

Been looking into that. There's a NIB SS-12 on ebay that I'm trying to
snare for 50 or 60 bucks. If not, the SS-10 is definitely my best bet.

Ryan,

Hang in there! I've been into 6 meters for about 4 years, and for the first year or so I felt the same way. Then I got into the habit of turning the rig on whenever I was in the spare room I use as a "shack", as well as briefly every morning and right after work. Also helps to keep tabs on the DX spots online (dxworld.com is good). Eventually you WILL be there when the band is open. I can almost guarantee that after the first opening you won't want to part with the 5054! 73,

Matt N3SOZ

One of my sons spent 6 months, on TDY from his usual Fed job, as a skymarshal following Sept 11. I asked him about shooting inside an aircraft, and he said they wouldn't hesitate if that had been the action of choice at the time. His training indicated that the rounds they use wouldn't easily penetrate the hull but they would attemp to shoot with the length of the cabin, not directly toward an outer wall. And those guys are trained to HIT the target.
I noted that I was glad he wasn't aboard with the Reid character attempted to light off the explosives in his shoe. Reid would've been history shortly.

Now there's a subject I rarely see discussed - time of day when various hams can operate, and band choices to get the most results at those times.

Most of my operating occurs in the evening or early morning. Maybe that's why 80 and 40 meters are my favorite bands.

>Guess I will have to wait till later in life to really enjoy this hobby...

This sort of thing is already in the tests. A block diagram is shown, with one of the blocks unlabeled. Examinee has to decide what device goes in the box (swr meter, tuner, T/R relay, etc.)

Of course the questions could be expanded and improved.

As much as we might want various forms of practical tests of one kind or another, it's extremely unlikely that FCC will ever go along. Besides the complexity, cost and subjectivity of such exams, FCC would also face the problem of 'discrimination' claims. After all, no other FCC license requires demonstrations of, say, soldering skills. Heck, 30 years ago, the test for my old Second Class 'Phone (P2-3-10341) was just a bunch of multiple-choice questions. How do we convince the FCC that the test for a ham license needs to be more involved?

Been that way for decades. The only reason we got Riley & Co. was the constant
begging and pleading of the ARRL leadership.

> I hope we don't become a pain three feet below
>the neck to the FCC.

Agreed. And that means we have to think about what will and will not be a pain
to the FCC. Because each such pain will, in the FCC's own words, move amateur
radio "one step closer to extinction".

As long as the Sky Marshal is acting according to "standing orders"
and not acting in a negligent manner, both s/he and the agency are
immunme from damages. Anyone can, for any reason, file a claim for
damages and a lawsuit to collect such claims if rejected by the
defendant. Whether it gets thrown out up front is another story.

The only reason that Riley & Co. got to do what we "old timers"
in the FCC Field Bureau wanted to do all along was that the
reorganization of the Witless Telegraph Bureau under the "what
am I bid for this slice of spectrum" folks passed the WTB's "don't
bother me with enforcement matters" responsibility (but not
personnel except for Riley) into the (used-to-be) Field Operations
Bureau which was being run at the time my Richard "Semper Fi" Lee, an
ex-Marine recruiting sergeant. The time was ripe.....

Therein lies the problems with out tort laws...On the one hand there are rules (ie: rules of engagement, Good Sam laws) that are supposed to protect the person rendering aid or acting within the scope of thier authority...on the other hand, John Q Public can STILL file any/all the lawsuits they want.

It MIGHT get thrown out on the basis of Good Sam or established ROE's, but the courts have a way of interpreting thier own ideas at any given moment.

One friend of mine witnessed a man have a heart attack...Did CPR for 17 minutes until EMS arrived and carried him on to the ER. The victim survived...and showed his gratitude by attempting to sue my friend for the ribs broken during CPR. Unfortunately that's a known hazard of CPR.

The case WAS thrown out, but the pretrial tit-for-tat was emotionally burdensome on my friend. Where's HIS justice?

>the concept of getting the club members to participate in some of the many
>available contests out there but have not had alot of luck there.

Welcome to the "lead a horse to water" factor, Ryan. It's inherent in almost every volunteer organization I have ever belonged to. Amateur Radio is no exception. Each Amateur will do as s/he see's fit based upon thier interests which may or maynot dovetail into what you deem as important.

>Still trying to figure out
>what the hell is gonna raise these people out of the "funk" that seems to be
>around this area.

It's part of the Burger King generation, Ryan...everyone want's it "thier way right away", and they don't want to have to do anything to obtain it.

I am very active in Civil Air Patrol. Have been off and on for 30 years. Lately we have all heard lot's of trumpeting about patrioism, volunterism, and "fighting back" against terroism, and many people have been looking for "something: to do. Unfortunately when presented the program and having had the

obligations of membership explained to them, less than 20% of those who express interest actually do anything about it.

And that's fine with me, acutally. I'd rahter have a handful of dedicated persons willing to do what's necessary, than to have a full roster of folks who are "along for the ride".

>Don't prejudge. Get to know, not make assumptions.

I am not "prejudging". I was responding to what you provided here, Ryan. Now that you have, I can say "You go, Dude!" Great job! Just don't expect a lot of hands wanting to jump in. And don't feel alienated over a lack of other volunteers not jumping in with you...it's not a phenomenon peculiar to Amateur Radio.

Simple, Tim (that has kind of a true ring to it, doesn't it?) -- Just call
the FCC, ask for Riley Hollingsworth, and tell him you're sick and tired
of the QRM from those darned "orientals" while you're freebanding on
27 dot triple-nickle. I'm willing to bet that he'll give the problem his
immediate attention!

Bob:

In my experience, doing code practice on a FM repeater or simplex
frequency is easier just employing FMCW by either introducing the
audio output of a code practice oscillator into the audio input of the
FM transceiver, or by latching the PTT "on" and simply placing the
mike near the CPO speaker. The resulting FMCW is surprisingly
clear, clean, and "punchy." On a simplex code training net I once
participated in, a very weak station at the limit of the repeater's coverage
area was easily "copyable" on the input frequency while transmiting
FMCW, even when his FM voice signal was an R3 at best.

Yup. I do at least part of my Christmas shopping at the Springfield Mall every year. Of course, as mass killers using firearms are concerned, Seegrist is sort of a tame example, wouldn't you say? However, she proved beyond any doubt that a .22 rifle can be a lethal weapon!

I remember reading the story about this in the Stars and Stripes while I was doing my first tour in Germany (operating as DA1ZW).

In my CPR class, that issue was brought up, and the instructor noted that anyone who was afraid of being sued should not attempt CPR. My own reaction and statement was that we don't always know who we administer lifesaving to. It may be a wonderful person, it may be a jerk, it may be someone who wants to play the lawsuit lottery.

I also noted that if I see someone who needs help, I would give it. I would give it even if I knew I was going to be sued. I would give it to a person who had already succesfully sued me for the same thing previously.

We cannot help it if we save an asshole, but we can probably sleep better at night. There's the justice Tell your friend he did the right thing. And to expect no gratitude from the wicked.

Hello I have something to say about back 40/ 50 years ago you had allot more time on your hands lets face it all you did have is radio and books to keep you busy now look whets going on TV , computers, phones a wide selection of music and hobbies it seems so strange that they want more people to get into ham but they get join the 21st century being a radio teck and with ham radio in the house if you can't pickup a mike and say hello you take it to get it fixed so that you can. I know a lot of people that would make great hams but like me there isn't enough time in the day for that meanwhile ham radio is dyeing , well I have taken enough of your time chow.

Ignoring the posted sign "Please don't feed the trolls". I don't know what 27.555 is allocated to in Asia, but they just might be legal in their home country. But you're definitely not legal here in the USA.

Don't forget that everyone thinks all hams are old - think for a moment ... all were young at one time ... I got my license in 1962 and was active until 1970. What happens? Families happen. A lot of folks become inactive between their early 20s and perhaps 40 or more. The kids are gone .. one has more time .. and voilla! Back on the air. Yet, once one retires, there is even more time. My gut feeling (personal feeling only) is that this is what makes folks thinks all hams are old. Many are not; however, it is the retirees that have the time to become very RADIO ACTIVE.

Yup, no "temporary AE" stuff. In the late '60s they were running a 6-8 week backlog on any mail transaction. Getting a new Novice typically took three months (6-8 week delay between code test and written, 6-8 week delay between written and actual license, total time 12-16 weeks if you didn't fail anything).

>The "real" Telegraph 2 license also arrived in that timeframe.

$135 before or after taxes?

$135/ month = $1620/ yr
$4500 = 2.777 years salary

>Only fifteen years later I
>made $135/week as a machinist at Westinghouse. Figger those incomes &

WW2, Korea, postwar affluence and inflation.

He saw the barracuda coming.

>That one turned into a thread and a half huh? I still gotta sort out
>the price ya pay in losses with ferrite cores vs. air cores vs.
>bandwidth vs. weight & bulk.

Not worth the trouble. Both a decent bead balun and either coiled-coax type have negligible losses. The big questions for you are

1) How much balun effect does it give on the bands of interest? (more ohms = better)
2) How much does it cost in size and weight?

>Not to mention the difference between a
>balun as an xfmr and a balun as a choke and how ya measure the choking
>effect without a $5,000 HP or GR impedance bridge.

There's an article waiting for the person with access. Make up a bunch of optimized designs and publish 'em.

>In the meanwhile
>Lew's RG-174 and a 1" series 70 core combination looks attractive for
>the 20/15m FD dipole.

I never bother with baluns for a dipole.

How much detail did the story go into? For example:

- She had a long history of mental problems, and had been committed several times for violent behavior.

- She had tried to buy firearms from a local Kmart but was refused because her behavior was too bizarre.

- The weapon and ammunition she used were obtained illegally. She lied about her mental health history on the paperwork required to buy them.

Nowadays it's more like 20s through 50s. Folks have kids later in life, get
remarried, etc. at a much higher rate than before.

And it's not just families, either. Jobs and other commitments eat up the
available time. Two-career families are the norm today.

>The kids are gone .. one
>has more time .. and voilla! Back on the air. Yet, once one retires, there

There's a lot of truth in what you say, Jim. Here are some other factors, all
supporting your theory:

A highly "radio active" ham may be quite invisible to much of the outside
world.
This ham's antennas are not obvious, and the shack is tucked away in a corner
of the basement. This ham operates when time permits, but is rarely seen at the
radio store, hamfests or club meetings because "as time permits" is at odd
hours, and all necessary ham purchases are done by mail or online.

Tom,
I realize this is more troll than anything, but I'd
like to correct a few misconceptions you seem to have.
Back 40 or 50 years ago, people were as busy then as
they are now. There were different forms of entertainment,
and for the time, they were as well thought of (equaling
thinking with TV is sort of an oxymoron) as the forms
available now. Wait a few years, what's popular now will
be 'old' and quaint like what you think happened 'way back
then'.
The requirement to know Morse code is part of the licensing
process for privileges below 30 Mhz by international treaty.
Until those international treaties are changed, it's gonna
be there. The level of proficiency for the code has been
reduced to 'childs play' now. If you can't learn it in a week
or two, you are just not trying. It does require effort though,
and if your not willing to put out that little amount of effort,
well, you don't really want a license very much, and why should
it be given to you? Try it, you may be very suprized to find
out that it can be a lot of fun. If you have time for CB radio,
then you have time for ham radio.
I wonder where you got the idea that amateur radio is dyeing,
because it certainly isn't. The number of hams has never been
very large and considering that the radio spectrum is a limited
resource (they ain't making no more new frequencies), and that
the bands are crowded as is, who the devil needs a bunch of new
hams, where you gonna put them? As far as joining the 21st
century,
name one mode of communications that hams ~can't~ do if they want
to.
CW, all forms of voice communications, digital, TV, satellite
stuff,
and I don't know how much more, but you name it, they can do it.
So, if you want to find excuses for not getting a license,
that's
fine. If you want to believe amateur radio is dying, if that
makes
you feel better, then that's fine too. I have a suspicion that
it'll
be around a lot longer than you or I will be.

>Getting a new Novice typically took three
>months (6-8 week delay between code test and written, 6-8 week delay between
>written and actual license, total time 12-16 weeks if you didn't fail
>anything).

Took my Novice third week of September, 72, and was issued WN8OAH on 27
October 72.

First station was a Heathkit HR10B receiver and a 6146B crystal controlled
transmitter on 3720kHz.

Sure miss those fun days!

Jim, so other hams can remarry and have children later in life, dual
careers, etc., but when Brian remarries later in life, has children, and
starts a second career, it's no excuse for not devoting an incredible number
of hours to increasing his code speed for your pleasure?

Brian

A point you (Jim N2EY) and I have agreed on for many moons.

> As much as we might want various forms of practical tests of one kind or
> another, it's extremely unlikely that FCC will ever go along.

I'd go so far to say it is 100% certainty that the FCC
wouldn't go along.

> Besides the
> complexity, cost and subjectivity of such exams, FCC would also face the
> problem of 'discrimination' claims.

The issue goes to the subjective nature of practical tests.
One person's OK solder joint is unsat to someone else.

> After all, no other FCC license requires
> demonstrations of, say, soldering skills. Heck, 30 years ago, the test for
my
> old Second Class 'Phone (P2-3-10341) was just a bunch of multiple-choice
> questions. How do we convince the FCC that the test for a ham license
needs to
> be more involved?

The reality of actual careers is that the practical is usually a
"blue-collar" job while many engineers never need to solder
a connection at all. In the R&D areas I have been a part
of at times, there were technicians that built circuits and
ran the tests which the engineers/developers thought up.

Cheers,
Bill K2UNK

The Tec class license doesn't require a code ticket so what are you too lazy to do the Tec test or just making excuses??? Ham dieing while it is reporting a 1% per year growth in both Canada and the US. In many countries they have had to add more prefixes to accommodate the growth. CB is what is dieing with many countries getting rid of the service all together and selling parts of 11 meters to commercial interests.

OK if you don't react to "smiley faces" """IF""" I ever try to be funny
with something you have said in a post I'll tell you in plain English that
I'm making a joke so you'll know!

The following warning is for the humor impaired people,
you all know who you are.

.= WARNING JOKE APROACHING =.

OTOH not reacting to smiley faces might be a good thing
especially when shopping at Wal-Mart!!

This is the part of the post where you are supposed to
chuckle at the funny statement wrote above.

Man I think I'M the one who needs to get a life here,
instead of posting on dumb NG's!

Amateur Radio Newsline™ Report 1305 August 16th, 2002

Amateur Radio Newsline report number 1305 with a release date of Friday, August 16th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Japan says no to putting communications over power lines and the NCVEC says YES to remote testing. These stories are first on amateur Radio Newsline report number 1305 coming your way right now!

(Billboard Cart Here)

**

SPECTRUM NEEDS: NO PLACE FOR PLT IN JAPAN

Proponents of using Power Line Transmission or PLT technology have suffered a major setback. Telecommunications regulators in Japan have said NO to its implementation after tests show that the system could interfere with other spectrum users including ham radio. Jeramy Boot, G4NJH, has more:

--

The RSGB has learned from its contacts in Japan who have been working on problems of interference from Powerline Telecommunications Systems that, following extensive trials, the Ministry of Public Management, Home Affairs, Posts and Telecommunications has decided not to permit the roll-out of PLT systems operating in the range 2 to 30MHz in Japan. Japanese studies have shown that emissions from PLT are harmful to HF communications and all requests from PLT manufacturers to operate PLT systems have been refused. The RSGB has been told that the Japanese amateur society, JARL, has been actively working with the government, along with radio astronomers, broadcasters and others, to assess the impact of PLT systems on the radio spectrum. We understand that this decision has been given much publicity in the Japanese national press, which has highlighted concerns about interference to safety-of-life services.

--

What about Power Line Transmission systems being proposed elsewhere in the world? G4NJH says that in Europe, the Radio Society of Great Britain continues to press for tight limits on emissions from all wireline based telecommunications systems. Also that it is working with other High Frequency users to try to ensure that the spectrum remains uncontaminated by wideband noise. (GB2RS)

**

THE VE TESTING SYSTEM: NCVEC SAYS YES TO REMOTE TESTING

The National Conference of Volunteer Examiner Coordinators have endorsed experimental use of videoconferencing technology to conduct Amateur Radio testing in remote areas of Alaska. Newsline's Bruce Tennant, K6PZW reports:

--

An ARRL bulletin says that it all happened when the nations VEC's gathered with the FCC to discuss the all volunteer testing system and ways to inprove it. Meeting July 26th in Gettysburg, Pennsylvania, the National Conference of Volunteer Examiner Coordinators or NCVEC voted to back a one-year trial run to be conducted by the Anchorage Volunteer Examiner Coordinator in Alaska.

Jim Wiley, KL7CC, of the Anchorage group told his VEC colleagues that it's very expensive to provide Amateur Radio test sessions to the thousands of Alaska residents who live in remote areas. The vote followed discussion on whether having a VE team remotely monitor a test session while an unlicensed individual proctored the exams on site would comply with FCC Part 97 rules.

Section 97.509(c) of these rules says that three VE's must be present and observing the examinees during a test session. But Bill Cross, W3TN, of the FCC's Wireless Telecommunications Bureau, pointed out that the VEC and the VE's are responsible for the proper conduct of the exams. He also said that no rule changes appeared necessary because VEC's already have authority to determine the manner in which their VE teams conduct examination sessions. So the test of videoconferencing ham radio tests will go forward.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW.

--

The Anchorage VEC says that it will provide progress reports to the NCVEC on the videoconferencing experiment. (ARRL)

**

ENFORCEMENT: THOSE REPEATER WARS

Repeater wars continue among hams on both the east and west coasts. And the CQ Magazine website says that those involved are dragging the FCC into battles the agency would really rather the ham community settle on its own.

Two examples. In West Virginia, where an uncoordinated repeater was interfering with a coordinated repeater in Virginia, the FCC ordered the owners of the uncoordinated repeater last winter to resolve the problems. However, it appears that interference is continuing and the FCC is again looking to the owners of the West Virginia repeater to investigate and resolve the complaints.

In California, a strange one. Last March the FCC found no enforcement issues involving a repeater in Sonoma County following complaints from another repeater group. Now, users of the Sonoma repeater are complaining of interference from the repeater whose trustee originally complained to the Commission about their repeater. (CQ)

**

ENFORCEMENT: FAX BROADCASTER FINED $5.4 MILLION FOR JUNK FAXES

The Federal Communications Commission issued a record fine of over five million dollars against a company for sending junk faxes to businesses and consumers. Amateur Radio Newsline's David Black, KB4KCH, at our South-East Bureau has the details.

--
The August 7th fine against fax.com of Aliso Viejo, California is the largest ever by the commission for violations of the Telephone Consumer Protection Act. It is also the first against a company known as a fax broadcaster.

According to an FCC release, fax.com was paid to send unsolicited advertisements and other messages on behalf of more than 100 businesses. And FCC Commissioner Kathleen Q. Abernathy says that despite repeated warnings from the commission and numerous consumer complaints, fax.com appears to have made no effort to mend its ways.

Commissioner Abernathy added that the company appears to have founded its business on the practice of sending unsolicited faxes in flagrant violation of that law. This has resulted in the fax.com being cited for close to 500 violations at about $11,000 per violation. Thats the maximum penalty and it adds up to $5.4 million due to Uncle Sam.

But a lawyer representing fax.com has another opinion. Attorney Mary Ann Wymore says that the company feels the rules on unsolicited advertising are an unconstitutional restriction of her clients freedom of speech. And Wymore indicates that fax.com is going to challenge it in the federal courts.

For the Amateur Radio Newsline, I',m David Black KB4KCH.

--

fax.com has been given only the customary 30 days to pay the fine or file an appeal. The FCC is also issuing citations to more than 100 businesses that used the services provided by fax.com. (Adapted from FCC release and published news reports)

**

ENFORCEMENT: DONT ADVERTISE BANNED GEAR ON THE WWW

The CQ website reports some unofficial advice from the FCC: If you're going to sell non FCC approved amateur and CB equipment, don't advertise it on the World Wide Web!

Case in point. A company in Wisconsin we have reported on before. Roper Electronics which was asked by the Commission back on June 18th to explain why it was alleged web advertising non-certified CB transceivers and HF linear amplifiers on its website. The company was also ordered to submit a list of all High Frequency transceivers and amplifiers sold within the US or offered for sale during 2002, along with the FCC certification number for each model.

The FCC's Riley Hollingsworth says that his office has received a answer to the inquiry from Randi Owen. Owen is the owner of Roper Electronics. Hollingsworth says that his office and the local FCC field office is reviewing Owen's reply. (CQ)

**

RADIO LAW: DIGITAL TUNERS TO BE REQUIRED FOR ALMOST ALL TV SETS

The FCC has decreed that nearly all television receivers made after July of 2007 must include the ability to receive and display digital transmissions. Digital tuners in some of the larger sets will be required by July 1, 2004. All new sets of 13" and larger must have digital receiving capability by July 1, 2007.

TV set manufacturers are opposed to the new law. They say that it will add at least $250 to the price of every receiver sold. Also, that there is not enough digital programming to watch.

The FCC has another view. It is convinced that forcing the public to buy sets equipped with digital tuners will help speed up the conversion to an all digital t-v broadcast system.

You can read the full details on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-225221A1.doc (From FCC release)

**

PRESERVING THE PAST: HAM RADIO COMING TO THE USS HORNET

Tom Hale, KB6SSN, tells the Amateur Radio Newsline that the staff of the USS Hornet Museum in Alameda, California has agreed to a ham radio project. The managers of the Hornet will allow a group of Amateur Radio operators rebuild and restore the original radio systems aboard the ship.

This will be a multi-year project three phase plan that includes getting modern commercial ham gear up and running aboard the Hornet as soon as possible. The planners are looking to contact anyone who served aboard the USS Hornet. If you did or if you know someone who did please have them contact Tom Hale KB6SSN by e-mail to tom@halemail.com. (KB6SSN)

**

WITH THE HANDI HAMS: SUMMER RADIO CAMP IS FULL

The Handi Hams report that their Summer 2002 Minnesota Radio Camp session is full but the group will hold its Winter camp in Malibu, California from March 2 through 9, 2003. Those interested in attending the 2003 outing are requested

to e-mail hamradio@courage.org to request an application. Applications will be mailed out as soon as they are printed and available. (Handi Hams)

**

HAM RADIO IN THE MEDIA: MORE DONATIONS TO “THE HUMAN RACE”

Kenwood Corporation will be the supplier of hand held radios for the t-v show The Human Race. And the shows producer, Bill Desjardins, W1ZY, says that he is happy to have Kenwood on board:

--
W1ZY: “We are certainly thankful to Paul Middleton over at Kenwood for giving the go-ahead on this and we look forward to a close working relationship with Kenwood.”
--

Desjardins tells Amateur Radio Newsline that there was a specific reason that Kenwood was selected.

--
W1ZY: “We are going to go with Kenwood’s in the field. The racers and the production crews will be using D-7’s during the actual race. Now other companies make good radio’s and we looked at all of them. But Kenwood won out because it packs APRS tracking into a really rugged field package.”
--

Desjardins also says that another important item has just materialized. He says that VE7FM has donated a home-brew, handheld, two-band beam to The Human Race for use with the D-7 and VC-H1 recently supplied by Kenwood to track satellites and pursue I-S-S contacts. Desjardins adds that this particular donation brings more good karma to the project. (W1ZY)

More information on the TV show “The Human Race” is on the web at www.humanrace.fr.st.

**

HAM RADIO IN THE MEDIA: FREQUENCY -THE TV SHOW

New Line Cinema is considering spinning off the movie "Frequency" into a TV Series. “Frequency” is the film where the non-ham hero uses his dad’s old ham radio equipment to communicate with his now decease father.

The movie was a great public relations boon for Amateur Radio. If New Line Cinema proceeds, a t-v show could help put the words ‘ham radio’ in the mind of every man, woman and child in the U-S of A. (Via W6AQ from published reports)

**

NEW PRODUCTS: A MANUAL YOU CAN CARRY

Jovan Peric, KB9K, says that he is now producing fully laminated mini manuals for a number of the most popular Icom, Kenwood and Yaesu transceivers. For more

information and photos visit www.radioamater.com/kb9k on the world wide web. You can also write to Peric at 3425 West Ardmore Avenue, Chicago, IL 60659. (KB9K)

**

CONVENTIONS AND HAMFESTS: DUKE CITY HAMFEST

The 2002 Duke City Hamfest will take place Friday, August 23 through Saturday, August 24th at a the University of New Mexico Continuing Education Conference Center in Albuquerque Hew Mexico. Hours are 5:00 p.m. -to 9:00 p.m. on Friday and 7:00 am to 3:00 p.m. on Saturday. More information is in cyberspace at www.qsl.net/dchf (N5ZGT)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

CHANGING OF THE GUARD: ERNIE HUDSON KI8O - S.K.

The ham who headed up the Montgomery Ohio ARES operation has died. Ernest Hudson, KI8O, passed away on August 2nd following a long battle with Cancer.

Hudson was 69 and had served as Emergency Coordinator for Montgomery County for over 20 Years. His organization with over 530 ARES members was one of the best in the nation. Hudson was also on the State of Ohio Council of Amateur Radio for the Montgomery - Greene County Local Emergency Response Council. And in 2001, KI8O was named as recipient of the Dayton Amateur Radio Association’s Distinguished Service Award.

Funeral services for Hudson were held on Tuesday August 6,2002 at the Parkview Church of the Nazarene, in Kettering, Ohio. (W8ILC)

**

RADIO BUSINESS: NEW MILITARY COMM SYSTEM BEING DEVELOPED

The Boeing Co. has been named prime contractor for a new U.S. Army communication system. The Joint Tactical Radio System is expected to be the foundation for all future Department of Defense tactical radios. (Published news report)

**

HAM RADIO IN SPACE: N SYNC WITH THE ISS

Russia's space agency says that it might scrap plans for 'N Sync singer Lance Bass to join an October mission to the International Space Station. This is because the Russian’s say that he had failed to meet a payment deadline.

Bass, who is backed by a consortium of companies rounded up by a Hollywood producer, David Krieff, has signed a preliminary contract for the trip. But Bass, who is already training at Star City Cosmonaut Center near Moscow has yet to secure a final deal guaranteeing a seat aboard the Soyuz craft.

If he does go, don't hold your breath waiting for him to turn up on 2 meter FM. He will be doing a lot of commercial endorsement work. In fact, Bass's space suit will be emblazoned with the names of sponsors. These logos will be seen during the eight TV shows Bass expects to beam down from space. Bass is also expected to record audio tracks for a future 'N SYNC release. (Published news reports)

**

HAM RADIO IN SPACE: THE AMSAT GLOBAL SATELLITE NET

Internet technology is allowing worldwide access to a new AMSAT net for beginning satellite operators. The AMSAT Global Satellite Net was recently started by Neil Hays, W6FOG, and may be accessed on VHF or UHF through repeaters linked via the Internet using the IRLP Internet Radio Linking Project network.

For those without IRLP access, but with HF equipment, the net may also be found on 14.250 MHz on 20 meters, every Wednesday between 0200 and 0330 UTC. I-R-L-P access is via radio only, but activity may be monitored by anyone with a computer, sound card and Internet connection. For more information on I-R-L-P, go to www.irlp net. For details on the AMSAT Global Satellite Net, see www.w6fog.net (W6FOG, AMSAT)

**

RADIO IN SPACE: SATELLITE RADIO VS. WIRELESS

XM Satellite Radio Holdings and Sirius Satellite Radio are reportedly in talks with wireless companies to resolve a dispute over interference with wireless communications services. The two sides have been bickering over the satellite services using equipment to extend their digital radio signals to hard-to-reach areas like metropolitan areas where skyscrapers can block satellite beams. Wireless companies fear that these translators will interfere with some wireless communications services. (Published reports)

**

DX

In DX F6FYD and F2VX are in Baku, Azerbaijan, until the 23rd of August. F6FYD will operate as 4J0FR- while F2VX will use the club call 4K7W. They will be active on all bands CW and SSB. (GB2RS)

And SM0CMH is active on 10 to 80 meters, including the WARC bands, on CW as SV5/SM8C from Kalymnos Island. He will be there until the 30th of August. For both these operations please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: WATCHING TV OVER THE MOON

And finally this week, here is one of those rare stories where an individual has done something so outrageous as to earn a spot in the record books. It happened down-under as we hear from Q-News Graham Kemp, VK4BB:

--
Dr. Anthony Mann of the Physics department at the Western Australian University has created a "Receiving system" which allows him to tune in Television signals from the US.

Tony has been a DX, TV enthusiast for decades, using his scientific credentials to stretch the laws of physical limits in order to "See further and further, unaided by satellites or wire".
His latest accomplishment, apparently a first, is to work out the parameters for using the Moon as a satellite reflector for bouncing TV signals from the USA into VK6.

As regards Tony's gear, he uses an Icom R7000 receiver, a Jaycar 91 element UHF antenna fitted with GaAs-Fet 20db masthead amplifier.

So far there's nothing very special about that except that the antenna is mounted on a tripod 1.5 meters above ground with the ability to adjust both azimuth and elevation to track the Moon in his sky.

Fortunately a Moon setting in Oklahoma is well above the horizon in Perth WA.

The signal Tony receives is tiny, very tiny, and not enough to produce a picture he can watch or even sound he can listen to. At this stage, it's not about watching Buggs bunny cartoons, it's all a bit more scientific than that.

Knowing the transmitters frequency to within a few Hertz, yes that's right Hertz, is essential as what Tony is searching for is a "beat note" indication that a carrier signal is present on the Icom receiver.

By using web amateur "Moon bounce" web sites he was able to calculate the Doppler shift for a group of likely TV stations, and then got hold of a precise TV station's transmitting frequency down to the last two Hertz; ie: 501.248XXX, the X's being the Doppler shift migrated.

Results this year have included signals originating in Oklahoma and Indiana.

--

You can read more about Dr. Tony Mann’s television reception experiments at the cyberspace address that you will find in this at www.physics.uwa.edu.au/~agm/eme1.jp

What's the big deal on code? Heck, get your codeless tech. Had a nasty crash involving unix and windows partitions. I hit the 85 repeater to tell a friend - and within 30 seconds, someone broke in with the advice to boot the Linux and remove the partitions that Windows fdisk couldn't. It worked and I'm back up and running. You won't find that kind of help on channel 9. ;)

Commercial license terms were always 5 years since before I got my
first commercial license in 1952. The only exception was the
Limited Second Telegraph issued as an emergency measure during the
Vietnam War years because of the lack of qualified marine Radio
Officers. To get that, one would have had to have an expired and
unrenewable Second or First Telegraph license, re-take and pass the
code test, and re-take and pass the writen test for Second Telegraph
within one year.

>The "real" Telegraph 2 license also arrived in that timeframe.
>Then a month after that the Telly 2 certificate slid through the mail
>slot . . ya din try to figger it, ya just went with the flow . .

'Splain that in English......what is the difference between the
"real" Telegraph 2 license and the Telly 2 certificate?

You must have gone to the weong office. San Francisco issued
commercial licenses within 2 weeks of passing the exam in those
years.

Amen right down the line. I don't belong to any neighborhood radio
clubs because I don't have anything in common with 90% of the members.
I'm primarily a cw dxer and dx contester which is a usually real
snoozer in these kinda clubs and I could give a bleep less about their
never-ending repeater politics. I don't waste their time and they
don't waste mine. "My club" is the big regional dx contest club where
I have soulmates by the dozen.
>
>
As far as volunteerisim in ham radio goes I'm simply not into it
except on a one-to-one basis vs. getting into it on a group basis.
Help a newbie, help an old-timer with his antennas, etc. I got tired
of being one of the dozen worker-bees in the local FD operation for a
couple years then putting up with the batallion of non-contributing
rubber-neckers who show up for the food and take a turn at an
operating position for an hour then go home. Screw 'em, henceforth I'm
operating single TX in a daughters back yard.
>
>
I spent enough time in municipal and county-level politics years ago
to get a real dose of doing all the work then getting my butt kicked.

Ah, so you're the guy spamming UJs forum. Also, you're not Tim Nebo. As I've explained before, I was not on the transmitter and the transmitter was ordered up the XO. An E-3 does not argue with a full Commander. Period.

Based on the fact that any "practical" testing always has
a subjective aspect to it. It just isn't going to happen,
and the QPC and/or VEC isn't going to ask for testing
changes that tack the process into subjective interpretations.

Cheers,

Steve:

That advice is spot-on! One of the most familiar whines heard from "newcomers" to ham radio is that they go to a club meeting, sit in the back row sipping a lukewarm cup of stale coffee, and aren't "welcomed" with open arms and gifts of silver and gold. Heaven forbid that they should take some initiative -- like making a nice, hot, fresh pot of coffee, sticking their hand out and introducing themselves, or volunteering to help out with some club function or project even if they don't know the people well or know enough about ham radio to feel "comfortable." We only achieve things when we push our comfort

level. As a result of our increasingly dumbed-down culture, nobody seems to want to do that anymore. They've become used to the touchy-feely "inclusiveness" of the popular culture, where everyone is told that their self-esteem is the most important thing, and working to achieve knowledge and personal success is ignored.

Ryan's pre-occupation with being "wooed" into the ARS is simply a symptom of our sick society. AFAIC, they deserve the stale coffee. And I'll make sure they don't find the nice fresh donughts, either.

73 de Larry, K3LT

I hadn't thought of it quite that way. By 'discrimination', I was referring to
the difficulties some people (vision impaired, various fine-motor disabilities)
would have with a soldering test.
>
I agree 100% that the subjectivity of the grading of a soldering test would be
a real problem. This is the same reason why essay questions would not be
approved by the FCC today.

There's another issue in all this. Requesting stuff that the FCC obviously
won't approve can simply make the requester look clueless. And such requests
may tick off the FCC for wasting their time.

>> After all, no other FCC license requires
>> demonstrations of, say, soldering skills. Heck, 30 years ago, the test for
>>my
>> old Second Class 'Phone (P2-3-10341) was just a bunch of multiple-choice

>>needs to
>> be more involved?
>

>The reality of actual careers is that the practical is usually a
>"blue-collar" job while many engineers never need to solder
>a connection at all.

Yep. In some situations engineers are not allowed to solder - takes work away from those who are supposed to do it, by agreement.

And in most cases, no FCC licenses, amateur or commercial, are needed to do any of it. The license is only required to USE the equipment.

>In the R&D areas I have been a part
>of at times, there were technicians that built circuits and
>ran the tests which the engineers/developers thought up.

Same here. And there's a good reason for that - each level checks the other. In anything safety-related, you always want somebody else checking the work.

So the real-world focus is simply this: What can be done to improve the written tests in ways that will be approved by the FCC?

Reality check here...most people when confronting a new social
situation (and that is exactly what newcomers are doing). Very few
people are naturally that outgoing. Make a fresh pot of coffee? They
probably
don't even know there's coffee there.

> We only achieve things when we push our comfort

This isn't about self esteem or touchy feely garbage...it's
about common sense, common courtesy and just being
friendly to newcomers who more than not haven't much
of a clue about how the group functions, who's who, etc.

> Ryan's pre-occupation with being "wooed" into the ARS is simply a
> symptom of our sick society. AFAIC, they deserve the stale coffee.
> And I'll make sure they don't find the nice fresh donughts, either.

Every successful group/club I have belonged to makes a
proactive effort to recruit/woo/enlist newcomers. You
can sit on your laurels and wait for folks to "find" you, but
that's a risk you should acknowledge up front.

Cheers,
Bill K2UNK

3723. Dick McCollum, SK?

Brian:

What's the difference between Morse and Farnsworth? I know Farnsworth as a different method of sending the Morse code, not something altogether different *from* the Morse code, as you imply.

Because the QPC and VEC have a pretty good idea what the FCC will approve and
disapprove.

>> The most recent being the change in the code exam from 5 WPM
>> Morse to 13-15 WPM Farnsworth.

Incorrect. That method has been in use for years, and it's not the only test
available. All the VEC did was standardize on it.

Anybody who wants "straight" 5 wpm Morse can get it for the asking.
>
>Based on the fact that any "practical" testing always has
>a subjective aspect to it. It just isn't going to happen,
>and the QPC and/or VEC isn't going to ask for testing
>changes that tack the process into subjective interpretations.

'zactly. Practical tests, essay questions, even a Morse sending test require a skilled examiner(s) making subjective judgements. Not on the FCC's agenda. The only way it could come about is to prove to the FCC that the lack of such a test was causing serious problems for the ARS and other radio services.

Next thing you'll want, Brian, is an age requirement.

Hold on a sec....

Lack of qualified marine Radio Officers = shortage of skilled CW ops?

Typical time delay for a ham ticket was 6-8 weeks in the late 1960s.

Alrighty - here's a short list:

1) Increase the size of the Q&A pools (already in progress)

2) Increase the number of choices on each question from 4 to 5

3) Change the grading method so that wrong answers decrease the score
(eliminates the gain from pure guessing)

4) Break each Element into subelements (say, Safety, Regs, Theory) or some
such, and require a certain number of right answers in each subelement. (The
way it is now, a new ham could get all the Safety questions wrong and still
pass, all the way to Extra.)

5) Focus more on the basics and less on esoterics (like the "how much time do
you have to notify the FCC about a station in space" questions)

That's just a start.

Sadly, the info seems correct, Steve. I received the message below as
well:

"To All Recipients:

You are receiving this message because your e-mail address appears in
Richard McCollum's address
book My intention in sending this message is to simply get information
to those of you who are
friends, acquaintances, or correspondents of Richard's. If you are
receiving this message in error,
please accept my most humble and sincere apologies. Thank you.

David W. McCollum

MCCOLLUM-Richard Charles. Age 59 years. Born Niobrara, Nebraska
12/04/1943. Passed away
suddenly from a massive
heart attack 08/23/2002.
Survived by son Michael Keith McCollum, Lincoln, Nebraska; parents
Charles and
LaVerne McCollum of Omaha, Nebraska; sister Lea Blake of Omaha,
Nebraska; and brother David
and family of Omaha,
Nebraska.

As per Richard's request, remains were cremated and no services
performed.
Any memorials to the Salvation Army in his name.

I will accept queries for further information, but I respectfully
request that you provide your identity
and relationship to Richard. I reserve the right to reject information
requests to anyone I deem has no
need.

DWM"

The message appears to have come from his brother, David.

Dave K8MN

Add this one to the list Jim:

6) Revise all questions and do NOT publish the question pool any longer -
period.

The WORST thing that EVER HAPPENED to ham radio was not the relaxation
of CW testing speeds, it was the publishing of the FCC Question Pools.
Before 1982 you had to KNOW your theory and rules. Today it's nothing
more than rote memorization. The result? We now have "certified extra
class" hams who could not even calculate a series-parallel resistor
network, let alone be able to accurately describe VSWR. There was a
time when having an Amateur Radio operators licence meant that you KNEW
electrical and electronics theory. Today we are flooded with appliance
operators who can't even perform the most basic diagnosis of a fault
in their radio gear, let alone be able to design and build a voltage
regulator circuit for the VHF radio in their car. Ham radio has become
"plug and play". Just another glorified CB - as even a casual listen
to 2 Meters will tell you. Darn shame.

Amateur Radio Newsline™ Report 1306 August 23rd, 2002

Amateur Radio Newsline report number 1306 with a release date of
Friday, August 23rd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Europe prepares for another ham in space and a technology called AMBER Alert finds another kidnapped youngster. These stories and more are next on Amateur Radio Newsline report number 1306 coming your way right now.

(Billboard Cart Here)

**
HAM RADIO IN SPACE: BELGIUM TO LAUNCH HAM ASTRONAUT

Europe is about to launch another ham radio operator into space. He is from Belgium and the QSL cards are already being prepared as we hear from Jeramy Boot, G4NJH:

--
Belgium's second astronaut to go into space is a radio amateur. Frank De Winne, ON1DWN, will join the International Space Station at the end of October this year. The exact timing of the flight is not yet available.

Gaston Bertels, ON4WF, who is Chairman of ARISS-Europe, has organized an amateur radio contact with the Belgian air force Royal Technical School. Bertels says that there may be other opportunities for operators to make contact with the mission as well. A full color QSL will be available. QSL cards and listener reports should be sent either direct or via the bureau to ON7AQ.

Jeramy Boot, G4NJH.

--

More information will be made available as soon as a launch date is set. (GB2RS)

**

HAM RADIO IN SPACE: BASS TO FLY

Another flight being watched is a Russian re-supply mission this October. One that may carry a United States pop music star as the third space tourist to the ISS.

After weeks of squabbling, Russian authorities announced late last week that teen heart-throb Lance Bass of the boy-band 'N Sync will probably travel to the international space station after all. Bass still has not paid any of the

estimated $20 million for his flight but a spokesman for Russia’s RKK Energia has also confirmed that plans for Bass' seat is being held for him and launch preparations are moving forward.

If Bass makes the trip to the International Space Station, he will become the youngest person ever in space. This title has been held since 1961 by former Soviet Union cosmonaut German Titov who was only 25 when he made his first flight. Bass was born in 1979 and is currently 23.

At airtime, Bass’s sponsors have indicated that his every waking moment on orbit will be pre-planned. This could mean no ham radio using the ARISS Amateur Radio station on board the ISS. (ARNewsline™ from published reports)

**

EMERGING TECHNOLOGY: UPS NOW NEUTRAL ON RFID TAGS

United Parcel Service now says it's neutral on a SAVI Technology's proposal to permit higher duty cycles than current Part 15 rules permit for Radio Frequency or RF ID tags. These are tags used for tracking shipments and packages, among other applications. The ARRL has said that adopting SAVI's proposals would result in severe and harmful interference to Amateur Radio and has opposed the plan.

And the ARRL Letter now reports that UPS recently clarified its position in an ex parte filing to the FCC. In its statement, the shipper said that it takes no position on the rule changes proposed in the SAVI Petition because they will have virtually no impact on U-P-S's shipping operations. Also, that the requests are inconsistent with efforts to promote international standards for RF ID tags. The change in position is highly significant because United Parcel Service has an equity interest in SAVI through its UPS Strategic Enterprise Fund. (ARRL Letter)

EMERGING TECHNOLOGY: AMBER ALERT SAVES ANOTHER KIDNAPPED CHILD

Some hams in California are looking at ways to tie their repeaters in after the states new AMBER Alert system has helped to safely locate yet another kidnapped youngster. Nichole Timmons vanished from her bedroom in Riverside California on Monday night August 19th. She was found the following afternoon in rural Nevada based on tips called in by motorists who recognized the description of the girl, her suspected abductor and the truck they were in.

A description was flashed on electronic road signs across several South-Western states as part of a multi-state alert. At about 2:40 p.m. on August 20th, Nevada police spotted the girl's former baby-sitter, Glen Park, and Nichole driving through the Walker River Indian Reservation north of Reno. A tribal police officer stopped the pair and Park was taken into custody. Riverside Police Chief Russ Leach told reporters that the arrest came about because Nevada state police used their AMBER Alert system and received a tip from a passing motorist.

As previously reported, the AMBER Alert system is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996. It uses a combination of two-way radio, telephones, fax and data communications to quickly spread word of a child abduction. In theory it could also be interfaced to ham radio repeaters and packet networking systems. More important, with Nichole Timmons return, the AMBER Alert system is now credited with safely recovering at least eighteen children since 1997. (ARNewsline from news reports)

EMERGENCY COMMS: REPORT SAYS NYC EMERGENCY RADIO SYSTEM FLAWED ON 911

Poor radio systems with no inter-operability contributed to the casualty count in New York City last September 11th. This as a report on the aftermath of the terrorist attack targets the city’s emergency radio system as not being adequate for the task that day. Amateur Radio Newsline’s Bruce Tennant, K6PZW, tells us what that report had to say:

--
The report was prepared by high ranking New York City department officials aided by the management consultant McKinsey & Co.. It found that the rescue effort while highly, successful was hurt by a failure of city departments to work together, poor organization and a faulty radio communications system.

The radio system caught a lot of criticism. It was singled out as being the biggest problem after firefighters had entered the twin towers.

The report found that once inside, radio communications problems left many commanders and firefighters unable to communicate with each other. To make matters worse, the fire department's radios were incompatible with the police radio system and vice-versa. In other words, no inter-operability between police and fire and no direct radio communications between the two agencies.

New York City Mayor Michael Bloomberg has assured the city that the fire department's radios work properly in the future. This, regardless of the cost of improving it. Police are also considering opening the department’s citywide system of repeaters to the fire department in order to help solve the communication problem for future joint efforts.

Even with the radio problems an estimated 25,000 people were evacuated from the twin towers that day. Mayor Bloomberg calls it the most successful urban emergency evacuation in modern history.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

As widely reported, ham radio operators were among the first on the scene in lower Manhattan. They operated using an array of their own equipment and networks providing communications to all who need it. Hams and their gear performed almost flawlessly in the hours, days and weeks following the September 11th terrorist attacks. (ARNewsline™ from published news reports)

**

ENFORCEMENT: TAKE THAT LINK OFF THE AIR

The FCC has ordered a Los Angeles area ham to get coordinated or remove a repeater link from the air. Daryl Duckworth of the agency's Consumer and Governmental Affairs Bureau explains the action taken:

--
Duckworth: "We issued a letter to Leobardo Coronado, KC6PXL, of Sun Valley California, ordering that on receipt of this letter to KC6PXL, that an uncoordinated repeater link must be shut down until either coordination is obtained or a detailed plan is submitted that will prevent interference to a coordinated repeater operating on the link frequency."

--

Coronado was warned that his failure to shut down the uncoordinated link will result in enforcement action that could include license revocation and a monetary forfeiture of up to $7,500. (FCC, RAIN)

**

WITH THE FCC: FCC UNIVERSITY" LAUNCHED - CONTINUING LEARNING FOR THE FCC STAFF

The Federal Communications Commission has launched what it calls FCC University. This is a new program to ensure that FCC staff members have the cutting edge knowledge and skills to respond to the challenges of the communications field in the 21st century.

According to the CGC Communicator, FCC employees can choose from a vast array of courses on generally applicable subjects. There are also sections of FCC University that are specifically geared to meet the educational needs of engineers, economists and
lawyers working for the agency. Complete information on FCC University is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-225430A1.doc (CGC Communicator, FCC)

**

CONVENTIONS & HAMFESTS: BIG BUSINESS IN HUNTSVILLE

In news from the ham radio business world, last weekends Huntsville Hamfest in Alabama may have signaled a turn-around for those who make their living selling ham radio gear. And that's good news for more than just Amateur Radio.
David Black, KB4KCH, reports:

--
While a great deal of the world's Amateur Radio equipment is manufactured in Pacific Rim countries, most of it is sold right here in the United States. The majority of sales are by family-run businesses. And as the U-S economy sagged so did ham gear sales. Slow sales meant the end for some businesses. Others struggled to survive. Now, there appears to be a turnaround with word of a fantastic sales weekend at the Huntsville Hamfest in Alabama. How good was it? Chip Margelli, K7JA sells equipment for Vertex-Standard:

--
Margelli: "Well, it has been a great show this weekend. The crowd was very active, especially Saturday morning and early afternoon. Sunday has been busier than normal and we have had great weather and a good turnout. A lot of boxes have been going out there door and there has been a lot of interest in the new products."
--

Good sales aren't the only encouraging news at Huntsville. Event organizers are thrilled at other figures—the number of people attending. While the exact gate figure was not yet available, Hamfest General Chairman Scotty Neustadter, W4WW says it could be a near record year.

--
Neustadter: "I was a little bit hesitant to think that myself. I try to error on the side of caution. But I was very, very pleased and I am thinking that we are definitely up from last year and the year before. The attendance would be a record for a Huntsville Hamfest with the exception of the year that we were the ARRL National."
--

Neustadter's enthusiasm is echoed by Todd Mowery. He's with ATOC, the company distributing Alinco ham gear. Mowery says Saturday was especially good.

--
Mowery: "Oh, I thought it was a very good weekend. Saturday was very crowded. Very impressive."

"I enjoyed it a lot. The booth was busy. We have quite a few new products over the last year that we put out -- mostly in the HT realm. And they have done really well for us. And the crowd that showed up yesterday enjoyed seeing those new radios."
--

The most succinct evaluation of Huntsville probably comes from Gary Green, N4CJX, of Ten-Tech, who needs few words to describe how he feels about this Hamfest:

--
Green: "We love Huntsville."
--

Green says Ten-Tec will be back next year. Just about everyone else is saying they will, too.

From the Amateur Radio Newsline Southeast Bureau in Birmingam, I’m David Black, KB4KCH.

--

One more word about this years Huntsville Hamfest. It concerns the D-X Banquet. Bill Hall, W4GBF, was one of the banquet planners. He tells Amateur Radio Newsline that for the first time in its history the banquet had more people want to attend than there were seats available. Hall could not talk with us very long. He was out scouting up extra seating. More on Huntsville a bit later in this weeks newscast. (ARNewsline™)

**

CONVENTIONS & HAMFESTS: ARRL IN SOCAL

Successful ham radio conventions are not limited to Alabama. Information out of California indicate that the Southwestern Division Convention was also a success. Reports from San Diego say that there were plenty of vendors doing a brisk business and all of the forums were jammed packed. We spoke with Gordon West who was on the roof doing antenna work. He was one of the presenters at the convention and Gordo says it was two thumbs up show:

--
West: “I’m up on the roof doing ATV antenna work and ATV as well as emergency preparedness was one of the many topics that we talked about at the Southwestern Division Concention. And boy-oh-boy was it busy. The aisles were packed on Saturday morning all of the way through Saturday evening and the outside exhibits of the emergency communications vehicles were well attended”
--

Highlights included the FCC’s Riley Hollingswoth, K4ZDH, hosting a two-hour enforcement session and Bob Heil, K9EID, presenting his famed audio conference. One source tells Amateur Radio Newsline that there were about 1500 people who made the trek to San Diego for this show. (ARNewsline™)

YOUTH IN HAM RADIO: 2002 YHOTY AWARD PRESENTED TO KB3GWY

Saturday August 17th was a special day for a Reading Pennsylvania teen. That’s when seventeen year old Josh Abramowicz, KB3GWY, became the 2002 Young Ham of the Year. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, was at the Huntsville Hamfest where the presentation was made:

--

Abramowicz: “I share the enthusiasm of my colleagues at home when I say that ham radio extends many, many opportunities to the youth of America. There are many young people in our country that take an interest in our great hobby. Unfortunately, there are those who have not heard or seen our hobby and I believe that it is a great thing to spread our hobby as far, as wide and as much as we can.”
--

That’s 17 year old Josh Abramowicz, KB3GWY, as he accepted the 2002 Amateur Radio Newsline Young Ham of the Year Award. Abramowicz was honored for his work in promoting Amateur Radio in and through the Boy Scouts of America. He says that its important to let other kids know about ham radio.

--
Abramowicz: “The youth of America are interested, but in to many cases they never see any of the action that our hobby provides. Therefore, I think it is our job -- young and old -- to do our best to pass our hobby on to the next generation and this can be done in a lot of ways.”
--

Abramowicz went on to detail how this can happen:

--
Abramowicz: “I've done it through Venture Crews. There are also many other ways. There is youth groups, families promoting Amateur Radio to the youth in your neighborhood. They are the future of Amateur Radio. Much like a lot of our radios and a lot of our equipment, all it needs is one spark.”
--

And after receiving his gifts from Amateur Radio Newsline, Vertex-Standard and CQ Magazine, KB3GWY turned the tables with a special gift of his own:

--
Abramowicz: “I have here a couple of patches from the K2BSA station from the National Jamboree. These are limited edition patches with “Radio Scouting” written on it. There is K2BSA and it has the world symbol for Scouting. First of all I would like to present one to Mr. Bill Pasternak for his kind generosity. I’d like to give one to Chip from Yaesu for his kind generosity also the gentleman from CQ.”
--

Josh then donated his major gift from Vertex Standard -- a Yaesu FT-817 to the Boy Scout Venture Crew he is involved with:

--
Abramowicz: “I just want to say that the equipment will be going to the Venture Crew and the future efforts of our Venture Crew working with youth and getting them on the air. So thank you. (applause)
--

And Amateur Radio thanks Josh Abramowicz, KB3GWY, for being another excellent example of ham radio youth at its very best.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

--

Want to hear more? Well you can. We have the entire 13 minute ceremony posted as this weeks Newsline Extra. Just go to www.arnewsline.org and click on this weeks newscast number at the top of the main page. (ARNewsline™)

INTERNATIONAL-UK: BIG UK 5MHZ EXPERIMENT FOLLOW-UP

The British 5 MHz propagation study using Amateur Radio is picking up speed. This as an increasing number of U-K hams apply for a Notice of Variation or N-O-V to let them take part. Once again, from Nottingham in the U-K here is Jeramy Boot, G4NJH:

--
During the first few days of the 'Fivemegs Experiment' a large number of NoV holders have made contacts with each other across the UK. Radio amateurs in other countries are showing great interest in this experiment, but we must make it absolutely clear that this has been authorized in order that we may carry out propagation investigations, antenna experiments and some emergency radio training within the UK. At the present time a very small number of US radio amateurs are authorized to conduct similar experiments under the group call sign WA2XSY. We know of no other amateur stations outside the UK who have any authority to call in. Jeramy Boot, G4NJH.

--

More on the British 5 MHz experiment in future Amateur Radio Newsline reports. (GB2RS)

**

INTERNATIONAL - CANADA: NEW VE5 SM

From our friends up North comes word that Bruce Donovan, V-E-5-N-D was recently re-elected Radio Amateurs of Canada Section Manager in the Saskatchewan Section. This, for a two-year term that will begin on November 1st. Donovan ran unopposed eliminating the need for a balloted election. (RAC)

**
INTERNATIONAL - JAPAN: HAM-FAIR TOKYO

The 24th and 25th of August, saw one of the world's largest ham radio shows takes place in Japan. It’s the Amateur Radio Festival better known as the Ham Fair and was slated for the giant Tokyo Exhibition Center. Last year Ham Fair attracted over 35,000 visitors. (JARL)

**

DX

In DX, K3TKJ is active on 40 to 6 meters as C6ALW from Andros Island in the Bahamas. He is there until the 18th of September and activity is mainly on SSB, but with some CW on 6 meters. (GB2RS)

HF98JP is a special event call sign activated by SP9HWN through the 31st of August to celebrate the visit of Pope John Paul the Second to Poland. The station is active on 80 to 6 metros CW, SSB, RTTY and PSK31. QSL as directed on the air. (Modern DX)

**

THAT FINAL ITEM: LICENSE DRIVE

And finally the story of a license drive. Not a campaign to get people their ham license. Rather the tale of one determined applicant who could not wait. It took place down-under as we hear from Q-News Graham Kemp, VK4BB:

--

Here's an amazing story of amateur enthusiasm that must be one for the record books. After many years of trying, Roscoe VK3TPJ was overjoyed on receiving news of his pass in CW. After all Roscoe has had a well-equipped HF station for years but hasn't been able to use it without supervision.

So enthusiastic was our Roscoe that waiting for the call sign in the mail was not for him. So he immediately jumped in his Falcon and drove 1000K up to Sydney to visit the ACA in person. He arrived at around 5am and waited a few hours for the office to open.

When it did, he was told he needed a passport photo to stick onto his new certificate. Undaunted, he went downstairs to an instant photo machine at Wynyard Station. Five minutes later he was back, photo in hand. Another five minutes elapsed and Roscoe was VK3KRH - authorized to operate on all amateur bands. The task achieved, he got in his car and drove straight home again - after just four hours in Sydney and a round trip of approximately 2000 kilometers!

--

Congratulations to the new VK3KRH. You can catch up with him on 160 meter AM during the morning hours. (Q-News)

**

If you can figure out how to get Congress to repeal the Freedom Of Information Act, you can probably persuade the FCC to go back to hidden questions. Chance: Zero.

OTOH, memorizing the answers to 600 questions DOES give a bit of knowledge to the person, meager though it may be.

Jim

"Larry Fine" <lf07434wall@hotmail.com>
shared these priceless pearls of wisdom:

->6) Revise all questions and do NOT publish the question pool any longer -
->period.
->
->The WORST thing that EVER HAPPENED to ham radio was not the relaxation
->of CW testing speeds, it was the publishing of the FCC Question Pools.
Jim Weir, VP Eng. RST Eng. WX6RST

Both of 'em worked right thru the Depression so they also tossed a
pile of cash on the table at settlement. Which was just 6 months
before the Nips hit Pearl. Dad's job running the U. of P. med shool
research shops died when the war started because he couldn't get
materials. At the "behest" of the Army he went to work at the Baldwin
Locomotive Works building tooling for tank production, six 12 hour
days per week and it wasn't optional for most of the duration. Between
the OT and inflation the folks had the place paid off by the end of
the war.

>
That's some EEs job, I ain't got the access or the right background.
The best I could do is pull together a collection of empirical test
results. That ain't very rigorous, if it ain't rigorous I don't
publish. Been there, done that, got spanked in a peer review and I
learned the lesson. Does not apply to this NG.
>
>
> I never bother with baluns for a dipole.
>
>
I'm using the dipole example to keep the discussion simple(r). I'm
trying to get enough of a grip on the topic area as I can for
application in more sophisticated antennas like multiband quads. The
DK9SQ loop looks interesting, might do one and try it at the
Royersford site, that one will need a small balun. Good candidate for
the RG-174 & 70 series core trick. That's probably as good as it can
get wrt to size & weight.

Even I know this is a troll, I will say that they "touched" Rabbit Ears down
in Florida and he's not
a ham. And if you really believe you can't get popped, you are really
stupid. And that is further
proven by your completely ignorant obsession with watts, and "swang", as if
that is the measure
of a man or a radio operator. Those of such persuasion are completely
without a clue.

Dont assume all non-Ham amatuers are CBers. Some may have been transmitting on the Ham HF band and have not been a Ham. There are some non Ham Amateurs, some of them who have a Ham licence.

Not that the REAL Tim Nebo is any saint either.
I'll bet the real one don't even know what's being
done in his name.

At least my callsign and email are real (I think)!

Blame Dick Bash for stealing the questions and answersm using
easily-duped examinees as his mules.

Blame the Washington FCC poo-bahs who refused to prosecute him and
settled for making the questions public.

Blame the potential examinees (including relatives of mine) who
bought and used Bash's books.

The problem is not the FOIA. The problem is the unwillingness of
the Headquarters Poo-Bahs to apply an existing exemption in the
FOIA to the material and to prosecute those who would make the
questions and answers public.

The easy way out was to publicize the pool and turn the process
over to VEs. It's always easier to use the Tom Sawyer solution
- get someone else to do your job.

My turn to stand corrected. Up to the very end of FCC testing the
Field Offices issued First, Second, and Third Class RADIOTELEPHONE
licenses after exams and for renewals. RADIOTELEGRAPH licenses came
from FCC Washington because of the need to affix and seal the photograph.
Amateur licenses were issued by Washington, and then by Gettysburg
after it was opened in the mid-60s.

Shortage of skilled CW ops with shipboard experience.

Remember that in those days the Navy was pulling the Victory Ships
out of Red Lead Row (Maritime Reserve Fleet in Suisun Bay near San
Francisco) and we were doing three and four Ship Safety Inspections
per day in our office alone.

Times have changed. The ships up in Red Lead Row are there to stay.
There are less than 600 ocean-going cargo ships under US registry,
they no longer use CW for any purpose, and the deck officers are
qualified to operate the radiotelephones, RTTY/SITOR teleprinter
systems, radars, and similar electronic goodies without a Radio
Officer on board.

Here's the scoop.

I looked Dick's "QRZ" adres up and called "411" and got the number...It was a bit eriee since I got his answering machine and his voice on it.

I left a message introducing myself and explaning why I was calling.

The family did call back and yes, Dick has passed just as it was stated in the e mail. It appears he had an acute and massive MI (myocaridial infarction), and he died at home, alone.

My wife took the message while I was sleeping for my shift tonight, and the family gave an address for condolences. She didn't think to ask for permission to post the address for the newsgroup, but if anyone wants to send me an e mail directly, I will give you the address for the family.

While participating in the Ohio QSO party this past Saturday, the
radio I was using, an Icom 746, had the VOX enabled, it was a PITA. If
anything I'd have rather had a headset with a foot switch so I could
use my hands to log contacts.

That being said, the fun we had just made me want to upgrade even
more. Well back to code practice.

And obviously, even with the easy availability of the study materials, many folks can't pass the tests anyways. I've advocated (tongue in cheek) two simple questions:

1) What is your name?
2) What is your address?

Spelling would count - no partial credit.
Passing would be 50%

I still believe some folks would have a problem with that. Would you?

This is the second ham radio (acquaintence, in Dick's case) of mine who has passed away suddenly and in an untimely manner from serious heart disease this year. The first was Jim Treadway, KA3IJO, age 50, who left us very suddenly in June, leaving his XYL Sandy, KA3PJP. Jim and Sandy are both blind amateurs and were regular Paratransit customers of mine (Sandy, of course, still is). I hope you all are taking care of your health, and especially watching your cholesterol and triglycerides. I am actively working on both myself, and my numbers are good. Please take care of yourselves.

I will E-mail my condolences to Dick's brother. Dick, go with God. You will be missed.

Phil, that's just what the FCC needs, an enforcement agent outside each test session looking for Bashers quizzing the applicants.

Ham tickets were 5 years (except the early novice). My technician class
license was renewed every 5 years from 1959 until about 10 years ago when
the
licenses were all extended to 10 year renewals.

The initial novice was good for one year and non-renewable. I'll
defer to others as to the history of change associated with the
novice.

Agree...especially for formula questions. The number of variables
and subsequent correct answers needs to be enlarged.

> 2) Increase the number of choices on each question from 4 to 5

OK by me, again, especially for formula questions.

> 3) Change the grading method so that wrong answers decrease the score
> (eliminates the gain from pure guessing)

Yet few other licensing entities do that. In any case,
I understand your goal/purpose.

> 4) Break each Element into subelements (say, Safety, Regs, Theory) or some

Agree very much so with that.

> 5) Focus more on the basics and less on esoterics (like the "how much time
do
> you have to notify the FCC about a station in space" questions)

Agree also.

That isn't going to happen AND even if it did,
the question pool would become "public" the same way it did when Bash
began publishing the questions by having test candidates send him
qestions they remembered.

> The WORST thing that EVER HAPPENED to ham radio was not the relaxation
> of CW testing speeds, it was the publishing of the FCC Question Pools.
> Before 1982 you had to KNOW your theory and rules.

Nope, the info was all there even in 1957/58 when I took the novice
and then the general. Many questions in study guides (e.g. AMECO,
etc.) turned out to be almost exactly as they were on the test.

> Today it's nothing
> more than rote memorization. The result?

Rote memorization was still the basic learning tool
for much of the info that was on the tests in 1950s
and 60s. Band edges, frequency allocations, FCC rules,
etc.

Electronics in general is "plug & play." The entire telecommunications
networks are based on products which use built in diagnostics,
circuit packs which are replaced in the field but are NOT
troubleshoot except on a central depot basis. Computers are pretty
much the same thing...disposable plug-ins.

Phil,
The ability to post questions (legally or not) on the ineternet is
reason alone that questions would become available. The recording
and movie industry can't stop "bootleg" copies of music and movies,
so what liklihood is the ability to stop an "off-shore" web site that
people send questions to and others download?

> The easy way out was to publicize the pool and turn the process
> over to VEs. It's always easier to use the Tom Sawyer solution

It was a pragmatic decision to be shore, but it ain't gonna
change. Hoping or wishing for a "closed" question pool
is just a waste of time (IMHO).

Much of the same type of stuff was in AMECO study guides
too. There's no "blame" involved. Where the purchasers
of those books criminals? Did anyone try to tell them
there was anything illegal about the quides? Indeed, there isn't
one credible public bit of information that suggests anything
was illegal.

My father took all the tests to get an advanced in one day down at the FCC (back in 1972). The examiner mentioned that he should review the rules before he gets on the air, as it seems he got most of the regs questions wrong. AFAIK, he never violated any rules when he did get on the air.

>An over-reaching statement at best.

Why, Bill? he paid or otherwise reimbursed people to give him information on tests that were allegedly closed to public disclosure. He (and his appropriately coined "mules") broke the law.

>> Blame the Washington FCC poo-bahs who refused to prosecute him and
>> settled for making the questions public.
>
>And just why did they not prosecute? The liklihood
>of winning in the end was (IMHO) not likly.

Are you so sure, Bill? I think the likelyhood was VERY likely! We ARE talking about the contents of an examination for federal licensure. The "pools" should have never been "opened". Perhaps made subject to peer review by competent organizations, but the verbatim questions should have been (and should be in the future) closed.

>Indeed, there isn't
>one credible public bit of information that suggests anything
>was illegal.

Sure there was. The caveat that used to appear on the cover of the tests that said you may not disclose the contents of the test to any third party! Seemed pretty clear to me!

You know what also looks damn good? The Ten-Tec Argonaut V. I'm a sucker for analog S/RF meters. I know it sounds silly, but There's something about an analog meter as opposed to the popular digital segmented-bar meters. It's more than just aesthetic, kinda hard to explain. Hope you, and everybody else understand(s)? I also like the fact that you can download new Flash ROM instructions to cover any new band allocations. The Jupiter's nice too, but that's a definite base where the Argonaut V is small and light enough for portable work. I'd chose it over the FT-817 in a heartbeat. I kinda have this new "buy American" attitude now. More so than before.

Brian, it happened at MY office. Whenever I would step out to go
to the men's room or to lunch, there was Dickie Boy pumping the
examinees eight in my face. We had confrontations several times.

Blame the Poo-Bahs. I was greatly in favor of getting the
Commission to at least issue a Cease and Desist Order which
would have dragged the issue before a judge but the legal
powers-that-were in those days were lazy and did not want to
take any steps that involved doing real work. It wasn't an
issue of winning or losing - it was just getting them to do the
**** work.

Am I bitter - you betcha. I never was that type of agent or
lawyer and I didn't respect it in others, especially when it
made my or my people's work meaningless.

Lemmee dump another PCTA perspective on you: I can hum along at 30 wpm
all nite and have been able to do so for the best part of a half
century. I don't run cw because it's "fun". It's usually not fun, it
can be a pain in the ass quite frankly. In my own case I get my
jollies out of ham radio by chasing dx, particularly on the low HF
bands, that's my fun. There isn't a single even half-serious dxer
anywhere who won't tell you that under the operating conditions
usually found in this game that cw isn't heads and shoulders above ssb
in *performance* no matter how you define "performance". And there are
thousands of us out there who share this non-opinion. Ask the Techs
who run 2m cw EME. It's not an opinion, it's indisputable physics.
>
Being able to take advantage of the performance benifits is only one
rationale for developing skill with cw, there are others. Yeah, I
know, you don't care about dxing. I've heard 'em all, don't waste the
bandwidth.
>
I don't bother with trying to "sell" cw to anybody, I don't get any
"commission" if I "sell" you cw. I have no stake at all in what you do
with ham radio and I could care less if you run cw or not. But take it
from this grumpy old brass pounder if you're not able to run cw YOU
are the loser because YOU are limiting your own horizons as they
relate to being able to take advantage of all ham radio has to offer.
And ya done it to yerself. Go for it, less QRM for me down the bands
if you can't use the stuff. "Take you electives" and hang in there on
the machines and in the Athritis nets on 75m, no skin off my teeth.

The feds couldn't get a conviction against a writer that
published CIA secrets. FCC questions would have even
a slimer chance of being stopped from distribution.

What law was broken. If I ask you to remember a question or two
that is on a test you take, what is illegal about that? You may
disagree with it, but I see it as a basic first amendment issue...if
it had ever gotten to court.

As I note in another post, the feds couldn't convict or stop distributrion
of a book containing a host of CIA secrets.

> >> Blame the Washington FCC poo-bahs who refused to prosecute him and

> by competent organizations, but the verbatim questions should have been
(and
> should be in the future) closed.

Wishing it so doesn't make it so. I again note the inability of the feds to
win against publishing of CIA secrets. On par, the FCC is even further
down the list of needs for not allowing the public to discuss or publish
remembered questions.

> >Indeed, there isn't
> >one credible public bit of information that suggests anything
> >was illegal.
>
> Sure there was. The caveat that used to appear on the cover of the
tests
> that said you may not disclose the contents of the test to any third
party!
> Seemed pretty clear to me!

Printing it on a test doesn't make it so. Let me rephrase for
crystal clarity....Indeed, there isn't
one credible public bit of information that suggests anything
was illegal in the eyes of any court case.

Cheers,
Bill K2UNK

>Being able to take advantage of the performance benifits is only one
>rationale for developing skill with cw, there are others.

Audio code readers and generators exist. Can one use these devices to obtain the benefits of CW without having to learn CW?

>But take it
>from this grumpy old brass pounder if you're not able to run cw YOU
>are the loser because YOU are limiting your own horizons as they
>relate to being able to take advantage of all ham radio has to offer.

CW takes effort, more for me than the different modes, antennas, radio direction finding, rf circuits, etc. For me attempting to learn CW would displace all these other aspects. This would result in me not being able to take advantage of all Ham Radio has to offer.

> I have no stake at all in what you do
>with ham radio and I could care less if you run cw or not.

Linking the General Class licence to passing a CW test imposes on others the requirement to learn CW if they want to obtain a higher licence.

If you want to advance technically, why impose a seperate, unrelated criteria as a condition to doing so?

There are many that want to learn CW, why impose on the rest that do not want to?

>willing to freely share there knowege

Hams do not tend to be rude. Some "holier than thou" attitude possibly. Part of this is using codewords for ordinary activities. Why say QRP when you can simply say "operating at low power". This tends to confuse people and leave them out of Ham Radio.

>try this ask a ham how to get more watts out of an amp or how to trim SWRs to
>work on freeband they will give you a ration of shit about rules etc.

Hams tend to focus more on rules, politics, Ham traditions, than the technical aspects. They tend to talk about what they did rather than share their knowledge.

>oh some hams are ok but the majority are barney fifes.
Ham Radio is a cult. Sure, one can learn the Qxx codewords, learn about Ham politics, etc. But, these items would not be important to you. You may be able to inderstand it, but not relate to it. Only a "true Ham" would relate to that.

Never had a pre-occupation with being woo-ed.... I am just saying that if I wanted to attract someone to a hobby that is "hanging in by a thread" I sure as hell as am not going to treat them like crap, blame them for problems I may have with the hobby and the changes that have happened that I may not like, even though they had nothing to do with the problems in the first place. If I wanted to be told I am a bad person from the get-go... I'll become a christian.

Getting back to the original intention of the postings.... the ARRL. Why should I join, other than the magazine subscription, which is getting thinner and thinner, and more ads? (yes, I know they need them to support it, but soon it is going to be all ads...)
Any other "selling point" is moot. The alleged Field Organization is non-existant.... The lobbying part that is supposed to be sooo important cannot even be proven or at least the amount of expenditures claimed necessary. What other points would make me "want to buy their product" meaning the membership?

Non-sequiter. We all have issues beyond learning the code to deal with
and on an ongoing basis from one end of life to the other. The
difference between the time it takes to acquire cw proficiency and the
time it takes to handle all the rest is that once you have the cw
proficiency it's over and done with for life. The total time required
isn't even a blip in the total amount of time the average ham spends
in the hobby.

Ryan, FWIW, I keep 50.525 pluged in my FM monitor which is scanning whenever I'm in the house. If it starts breaking the squelch, then it might be worth turning on the SSB radio and see if anythings popping.

Many years ago, QST featured a big-time 6M enthusiast that used television sets and everything else under the sun just below the 6M band to alert him of a rise in MUF and possible openings.

You must be on drugs or something. You are operating illegally.
CB starts at 26.965 to 27.405, anything out of that is illegal. They
could call the FCC on you and you could go to jail.

The more inconsequential the material, the greater the chance of punishment. No kidding - my wife was called for jury duty in a case of a Postal worker accused of mishandling $1.01 "found loose in the mail".

This came up when the New York Times published classified material leaked by Daniel Ellsberg.

Rest assured that if it were Sohl or Kane rather than Ellsberg, we'd still be mopping the floors in K-Block in Marion.

The finest gov'mint that "proteksia" can buy.....

>What law was broken. If I ask you to remember a question or two
>that is on a test you take, what is illegal about that? You may
>disagree with it, but I see it as a basic first amendment issue...if
>it had ever gotten to court.

IIRC there were rules at the time in both Part 13 (Commercial Radio Operator) and Part 97 (Amateur Radio) that proscribed assisting anyone in obtaining the license in a manner frowned upon by the FCC and there were clear markings on the examination material that the questions were not to be revealed to anyone.

The examinees were in violation by disclosing the material, and Bash was in violation as a principal in the offense by inducing the examinees to reveal the material.

Violation of an FCC rule is punishable by monetary forfeiture in an administrative proceeding (Comm Act Sect. 503) or by a fine in a criminal proceeding (Comm Act Sect. 502).

Another procedure is for the Commission to issue a Cease and Desist Order after an evidentiary adminsitrative hearing, violation of which goes into Federal District Court where the only question is whether the violator had an evidentiary hearing in the first place and whether the violator did ignore the order - no "trial de novo".

Of course, the classiest procedure is to apply to the Federal District Court for injunctive relief. The violator gets a trial de novo on the issues but after the injunction is issued and the defendant violates it, the judge can remand him or her to the slammer until s/he complies with the injunction. That's how we had to deal with FM radio "pirates" at the beginning.

This is all moot because with the advent of the Open Qyestion Pools and the kissing-off of the examinations to the private sector ("Less Work for Mother") those rules were deleted, and unfortunately one can't unring the bell.

As to "First Amendment" issues, that's a question of law which can be decided only by judicial review. "Commercial speech" (as differentiated from "political speech") can be made subject to all kinds of restrictions necessary for efficient operation of the government which are effective unless reversed by judicial review. The publishing of the exam questions is a clear example of pure commercial speech in Constitutional terms.

>Audio code readers and generators exist. Can one use these devices to obtain
>the benefits of CW without having to learn CW?

You can obtain some of the benefits of CW that way, but not all. Most codereaders only work well when they are fed clean, nonfading CW free of interference.

Player pianos have existed for a long time, too. But using a piano roll in a player piano is not the same thing as being able to play the piano. The person who chooses the piano rolls does not get the same benefits as the person who can play the piano.

>>But take it

It takes effort to learn, or it takes effort to use?

> For me attempting to learn CW would
>displace all these other aspects.

So you don't know CW now, but you know that it would require so much effort to learn that it would prevent you from doin anyhtin else? How is this possible?

>This would result in me not being able to
>take advantage of all Ham Radio has to offer.

Ham Radio is such a wide range of activities that practically no one can take advantage of all it has to offer.

And CW is a big part of ham radio. If someone does not know CW, they are missing a big part of what Ham Radio has to offer. Of course, they may not care about the part they are missing, but they are still missing it.

>> I have no stake at all in what you do
>>with ham radio and I could care less if you run cw or not.
>
>Linking the General Class licence to passing a CW test imposes on others the

>requirement to learn CW if they want to obtain a higher licence.

Linking the General Class and Extra Class licenses to passing more written tests imposes on others the requirement to learn more theory, regulations and other things if they want to obtain a higher class license. Those tests must be passed even if a ham has no interest in much of what is on them.

>If you want to advance technically, why impose a seperate, unrelated criteria
>as a condition to doing so?

For the same reason one must pass additional written tests to advance operationally. For example, a Technician can use 1500 watts of any authorized mode on the 50 MHz band, but in order to use, say, the 20 meter band another written test must be passed. And in order to use all of the 20 meter band, yet anither written test must be passed.

And note this: The FCC has officially said, in effect, that the ony reason they have kept the 5 wpm code test is because an international treaty requires it. That treaty requirement will likely be abolished next year, but until it is abolished the FCC thinks that the code test must stay.

>There are many that want to learn CW, why impose on the rest that do not want
to?

See above, about the treaty.

Why did I have to take all those written tests just to operate CW on 7020?

In the years leading up to Pearl Harbor, US ham licenses were good for 3 years. After WW2 the term was increased to 5 years. In 1984 (almost 20 years ago) the term was increased to 10 years, which meant that from 1989 to 1994 no US ham licenses expired at all.

>> The initial novice was good for one year and non-renewable. I'll
>> defer to others as to the history of change associated with the
>> novice.

Not only was the original Novice nonrenewable, it was "nonretakeable" and was not open to anyone who had previously held any class of ham license. You got one shot and then it was upgrade or off the air.

In late 1967 the term of the Novice was made two years. Then in the mid-1970s the Novice license term went through several quick changes in a few years:

First, holders of Novices were allowed to retake the exam and get another Novice after the license expired - but only after a year off-the-air had elapsed. Then the one-year-off-the-air requirement was dropped. Finally the Novice was made 5 year renewable, like all the other licenses.

The reason for all of the changes was the same: Too many Novices were dropping out after the license expired.

Those "codewords" were developed by commercial and military
organizations and adopted by ham radio in the first decade of the
1900s. And before that Western Union and the railroads used similar
"codewords" in their landline telegraph circuits going 'way back into
the 1800s. Helluva "cult" huh?

It is SWR, not SWRs. SWR is not plural.

Just wondering........ How many of you ham cry babies speed while driving to or from work? Isn't that illegal also? But you do it anyways, right? And you don't see me or other folks out there calling Johnny Law when you speed on by and or cut someone off DO YA? I don't think so!!!!!! But that is just fine with me cause there is going to be a day when all these frequencies are going to be open to the public anyways. Just look at the cb, the FCC couldn't stop people from using the AM legally with a license so they drop the license. So what are they (Ham Operators) going to cry about when everyone will be allowed to use these so called licenses only frequencies to cause hate and discontent like is done on channel 19? Just think about that one for awhile.. It is only a matter of time!!!!!!!! As it is now you folks are loosing frequencies cause no one is using them.

I consider them to be two entirely different situations. Those who
freeband "above 40 up to 27.999" (BTW, usually no higher than 27.8499
or so.) are, for the most part, hobbyists and usually operate using
SSB. Those intruding on the 10-meter band are usually truckers
operating AM on ch. 19 "two up." BIG difference! Those found below ch.
1 do not come close to the number of folks in that vast 5949 Hz
expanse above ch. 40. I'm not fooling anybody, I still monitor
11-meters and observe objectively. Take it easy.

Actually, Ryan, a greater number of advertisements results in a thicker magazine, not a thinner one. That's not just true for QST; it is true for almost any magazine.

In the matter of your not believing that lobbying on behalf of amateur radio exists: There are numerous accounts of those lobbying activities. It would be easy to contact an entity which has been lobbied and ask someone if the organization had been lobbied by the ARRL. You could even drive to D.C. and stake out the Washington offices of the League to prove to yourself that they exist.

I went to the West Virginia State ARRL Convention at Jackson's Mill last weekend. There I saw a non-existent Roanoke Division Director, a non-existant Ed Hare, a non-existant DXCC card checker and several non-existant ARES officials. They could all be found near the non-existant ARRL booth and display.

As to why you should join the ARRL, maybe you don't believe in a stronger amateur radio, speaking with one voice. Maybe you don't find the fellowship of other radio amateurs of interest. Maybe you have no need of any of the various membership services. Maybe you have no desire to read QST. I can't answer for you. Maybe you still see

yourself as an amateur radio outsider.

Why do you say the "The alleged Field Organization is
non-existant.... "?

Have you had any need for the field organization?
Have you attempted to engage help or assistance from
the field organization and been refused or otherwise
turned away?

If the answer is NO, then what do you expect to see, get
or derive from the field organization that leads you to
state it is non-existant?

I don't believe the federal government can copyright anything.
Seems that idea has been tossed about in other circles a few
times. Even if it could or did, just look at the wide open
internet distribution of copyrighted material going on today...
publications, music, videos, pictures, etc. The latest effort from
the movie/music industry is trying to get large IP providers (e.g.
AOL, AT&T, etc.) to block specific IP addresses that are not
in the USA. That's like telling the postal service to not allow
you or I to send mail to a specific address in some foriegn country.

Your assumption is that if applied and challenged, the rule
violated would have not been struck down as unconstitutional.
Lot's of rules, ordinances, laws get passed that ultimately are
tossed by the courts.

I first started on 6 meters while living in the Sequatchie Valley, about
25 miles west of Chattanooga. The valley is notable for deep approaches on
either side.

My only equipment was a TenTec transverter (Model 1208...still got it and
it works well) and a rotatable dipole that didn't even clear the roof line, yet
I have worked most of the northeastern US, much of the south and lotsa stuff
out west including Colorado and Mexico.

Most of the stuff I worked I "caught" by leaving the rig set up on 50.125
and just let the rig idle there.

One moment it's quiet and the next moment it's pandemonium!

73 es have fun

Understood.

Perhaps this shortage had an influence on incentive licensing. The 1963 ARRL IL
proposal did not include additional code testing for full privileges. But the
FCC saw fit to require 20 wpm for full privs and even proposed a new (to hams)
16 wpm test for the equivalent of an Advanced.

Maybe FCC saw ham radio as a source of skilled CW ops for the merchant marine.

> Times have changed. The ships up in Red Lead Row are there to stay.

One wonders what would happen if we needed their shipping capability again.

> There are less than 600 ocean-going cargo ships under US registry,

> Officer on board.

Yup. The key point is that it's not just CW which has been abandoned by the
maritime folks. It's the whole idea of a "radio operator" as a specially
skilled crew member. Like the trimmers, greasers and stokers of steamship days.

In fact, many of the HF maritime shore stations are shutting down. Not just their CW operation - their 'phone operations too. Most of the traffic goes by satellite.

There may come a time - soon - when the only true radio operators are hams.

And poor Brian will never get over it. Instead of getting his code practice where he could find it, like
most did, he is still pouting about the fact it wasn't to be found where he wanted it to be. Still bitching
a couple decades later, and still mad. Poor kid.

>Audio code readers and generators exist. Can one use these devices to obtain
>the benefits of CW without having to learn CW?

These devices provide only marginal CW copy at best, and then only when fed a perfectly clean, clear, strong CW signal from a station that is sending using a computer or a keyer/paddle combo. Add even a small amount of QSB/QRM/QRN, and all you're getting on the display are E's, I's, and a lot of gibberish being made out of every other letter/number/symbol. I bought an AEA Code Reader years ago, and it never gave me better than about 5% copy on CW -- better on RTTY, but not much. The best working part of the whole unit is the 12v. wall wart.

To get any benefit at all from CW, you must be able to copy "by ear."
End of story.

Brian:

Allow me. If you've been spending a good portion of the time you've spent griping about CW in the past 10 years actually learning and using it, you'd have been an Extra for the last 9 years! You could still become a dumbed-down "Nickle Extra" in a few weeks, but we'll wait until 2027, if that's the best you can do! I just hope we're all there to see it happen.

to or from work? Isn't that illegal also? But you do it anyways, right? And
you don't see me or other folks out there calling Johnny Law when you speed
on by and or cut someone off DO YA? I don't think so!!!!!! But that is just
fine with me cause there is going to be a day when all these frequencies are
going to be open to the public anyways. Just look at the cb, the FCC
couldn't stop people from using the AM legally with a license so they drop
the license. So what are they (Ham Operators) going to cry about when
everyone will be allowed to use these so called licenses only frequencies to
cause hate and discontent like is done on channel 19? Just think about that
one for awhile.. It is only a matter of time!!!!!!! As it is now you folks
are loosing frequencies cause no one is using them.

CERTIFIED MAIL-RETURN RECEIPT REQUESTED

Cheetah Transportation Company
378 Williamson Road
Mooresville, NC 28117-5935

SUBJECT: WARNING NOTICE-UNLICENSED RADIO OPERATION
Vehicle License Number LK-6870 (North Carolina)

Dear Sir:

Monitoring information before the Commission indicates that a driver of the
above vehicle licensed to your company was operating unlicensed radio
transmitting equipment on 28.086 MHz, on Interstate 77 in South Carolina,
on June 5, 2002.

Please be advised that operation of radio transmitting equipment without a
license is a violation of Section 301 of the Communications Act of 1934, as
amended, 47 U.S.C. Section 301. Such operation will subject the individual
to fine or imprisonment, as well as an in rem seizure of radio transmitting
equipment, in cooperation with the United States Attorney for your
jurisdiction. Fines normally range from $7,500 to $10,000.

You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth
Special Counsel
Enforcement Bureau

Go to the pages of QST and CQ and look at the money the manufacturers are spending on new equipment.

Manufacturers do NOT spend money on R&D for equipment they won't sell.

I know you can't stop being an idiot, so at least try to be a literate idiot.

>Did it actually go to trial?

Yes - she was a prospective juror (Federal District Court,
Northern District of California, about 10 years ago) and was
excused on voir dire after she was asked whether her husband
being a Federal enforcement agent would affect her ability to
reach a fair and impartial verdict. She replied "no, even
though my husband always says that other agencies get search
warrants and their cases prosecuted with far less hassle than
his agency does". Both the prosecutor and the defense attorney
jumped up exclaiming "excuse this juror" which the magistrate
did. (She didn't care for the Magistrate either.....)

The case, BTW, had all the fingerprints of a Postal Service
frame-up. $1.01 indeed! And what he did was to carry the (planted)
money to his supervisor rather than holding it above his head and
crying out "money found in the mail" as they claimed he was supposed
to.

>Did the jury convict?

I have no idea how the case came out. She had to ho back to
the jury pool.

Rules, ordinances, and statutes are regarded as valid until and
unless voided by judicial review.

The only legal precedent that the Ellsberg case provided was
that if someone with lots of political clout reveals classified
information to someone else with lots of political clout but not
entitled by law thereto, the Supremes have the power to bend
the law at whim, whether the bending is proper or not.

That wasn't the first wrong decision that the SCOTUS made nor
was it the last.

And I say that as a person admitted to practive before that Court.

Isn't it amazing how these idiots will pick out a few frequencies out of all the ham bands where there are those that act like cbers and say all of ham radio is like that? When all you have to do is tune any cb channel and all you hear is the same thing only worse, not just one or two channels but any cb channel. So just listen to any cb channel any time and you will hear the sorry state of cb radio.

A usenet group with a few complete jerks and it reflects all of ham radio? One small portion out of all the frequency available to ham radio and a few trouble makers out of over 600, 000 hams in the U.S. alone, and it reflects all of ham radio? I think you may be drawing conclusions based on very little evidence :) BTW, have you read some of the letters posted in old radio magazines. People have been saying the exact same thing since the 30's

Dream on, stupid! Mr. Hollingsworth only sent it on the 28th. I got it via
direct email from
him yesterday! It will appear on Rain Report next period and on the ARRL
website shortly.
And I have somewhat personal knowledge of this particular case, so go talk
about something
you know.

Case in point. The Shelby NC Hamfest is this weekend. This year,
as every year for the last ten, Shelby is home of the largest boneyard
(used equipment) in the Southeast. What is it full of? 10% old junk
ham gear. 90% CB amplifiers, modified CB radios, illegal imported CB
radios, modified marine & business equipment for truckers, unlicensed
low power FM broadcast transmitters, business band handi-talkies,
modified military equipment, etc. The FCC has never made ONE bust
at Shelby! Not One in ten years! Even a dumb ass can figure out the
FCC is not interested in this market place of illegal equipment.
Get a Life!

Denial, denial. Tsk,tsk! Like I said, it'll show up on the Rain Report next
period. Besides, Riley
emailed it to me yesterday. Believe what you like. I don't bitch about
CBers; only those who steal
frequencies they have no business using.

Great outdoor market! Great place to stock up on modified marine
radios for your 18-wheeler. Also you can buy linear amps at very
reduced prices, both new and used. One guy last year was selling imported
CB radios with all the "extra" channels all the way up to 29 mhz, for only
about $150. See ya there!

We should make a Q signal for "Get a Life", say "QGL". Anyway, it's perfectly legal for hams to buy used radio equipment and modify it for ham radio use. We did that for years with business and marine radios, surplus military stuff, even CB radios modified for 10 meters. We could even get one of those CB amps and clean it up and tune it up for 10 meters.

Dick, just because you were AWOL on the Novice subbands...

I'm working on Extra now. I can do that without you or the Novice subbands.

Too bad, isn't it?

Larry, I'm sure there are even more amateurs than Jim and you who know
exactly how I should be spending my time. It's called The Amateur
Gulag Syndrome. Luckily, this is America, and the FCC disagrees with
the importance that you've placed on a single mode.

BTW, I'll try to be an Extra this autumn.

>where the Argonaut V is small and light enough for portable work. I'd
>chose it over the FT-817 in a heartbeat. I kinda have this new "buy
>American" attitude now. More so than before.

That's good. Ten-Tecs are like Saabs. Either you love them or you hate them. There's not too many people that can "take it or leave it." I don't particularly like the FT-817 either. I'd personally choose the K2 over the FT-817, but Yaesu filled a niche with the increase of the Technician class licensee population. Take care and 73.

Mark

Does your rusted out Ford pick-me-up truck have a
sign on it saying "Radio Police"?????? and I'm sure
you have your ham call letters plastered all over it, like some
badge of accomplishment.
hahahahahahahahhahahah You REALLY need to
find a life!!!!!!

I saw you at the last Hamfest I went to. Your belly hung down over
your belt buckle, completely covering it. you hadn't shaved in days.
your glasses were like the bottom of Coke bottles and you stunk from
not having bathed in days. Most prominet though, you had your ham
call letters on your hat, shirt, name tag, six places on your vehicle, and
you were handing out qsl cards even to people who didn't want them.
Then you waddled over to the snack bar for the fifth time in the last
three hours, where you stuffed greasy nachos down your mouth, while
cheese dribbled all over your filthy shirt.
Yup, definitely saw you at that Hamfest, a "typical" attendee at any
hamfest you go to these days!!!!

Why not? That's the same logic (if you wanna call it that) Aanal Aaron, Jerry Ox, and Georgie-Girl use to put down CBers. What goes around comes around, you know.

And while you're listening, try 14.313! It's still a circus, but the alleged hams won't admit it.

Phil, I don't consider everything that the ARRL does is good for the
amateur radio service, or when having to suffer it is being a
"free-loader."

My previous point still applies. Simple solution, I stay away from
that frequency when that type of stuff is going on. A few jerks do
not make all operators bad on either side, but a jerk is a jerk,
either ham or CB. Operating illegally is just that. I consider
somebody who operates illegally just because "nobody is enforcing it"
a lowlife. The laws are there to be obeyed or, through the proper
mean, to be changed. When I operate ham radio, I do so according to
regulation. When I operate C.B., I do so according to regulation.
And before you or somebody else asks, I apply that to ALL laws
including traffic laws. When I bring up this argument, people always
ask me about speeders. Someone who intentionally and knowingly
violates speed laws is wrong - period.

What has the ARRL doen that you consider harmful, Brian? How has anything the ARRL has done in the past or present negatively affected YOUR ability to communicate via Amateur Radio?

Heehee!

Waaaaal, a long time ago, I owned a Ford--a Mustang, to be exact. Biggest
piece of junk ever made. Every time I went anywhere, I was F ound O n R oad
D ead. This sharpened my spelling
ability because when I was Found On Road Dead, I could spell Ford backwards:
Driver Returning On Foot!!!! LMAO!! I became so ANGRY at FoMoCo that I
vowed that I would never have to
F ix O r R epair D aily ever again! And I have been sitting behind a
"Bowtie" ever since 1973. The
Chevrolets didn't leave me stranded, didn't have major repairs, were easier
and cheaper to fix if there was (rare) a problem, and would leave my old
Mustang in the weeds!!! They also didn't make hard-to-cure ignition noise
like the Fords, were assembled better, drove quieter, and are cheaper to
operate. SHHHHHHHHH! Be quiet!!!! Listen! On a quiet night, you can hear
a Ford
RUST!!! LOL!

And here's a little ditty
dedicated to Ford
and authored by l'il ole me.

(sung to the tune of "What do ya get when ya fall in love?")

What do ya get when ya buy a Ford?
Ya get a lot of pain, trouble and sorrow.
What'll you do when it quits tomorrow?
I'll never drive a Ford again!

Don't tell me what it's all about!
I've been there, and I'm glad I'm OUT!
Outta those bills, those bills that bind me.
And that is why you'll never find me!

Driving around in a Ford again,
Cuz those bills, they got too heavy!
That is why I drive a CHEVY!
I'll never drive a Ford again!!

(snicker)

Now, Bert, it's all in fun, so I hope you can laugh, too.

73

Jerry

Yeh, just like Dave Heil was in violation for working foreign stations who showed up in Dave's LEGAL
allocations. So I'm in violation of {something} because I wasn't sitting waiting in the Novice bands for your
nastiness to show up needing some CW practice. Right. And you're a mental gnat, no, gadfly.

>

>
> I'm working on Extra now.

Working???? That's what you call work? Lots are doing it these days with a "Get your Extra in a weekend" coaching
schools. Memorize it all in one short weekend with time off for beer and skittles. Whatta deal. You sure should
be proud.

Agreed...that's my point, however, the FCC deemed
it approprate to NOT test or otherwise risk
the validity with Mr. Bash (IMHO). We'll never know exactly
why, but in failing to do so, there can be a presumption
that the FCC thought the case would be lost. You are,
of course, free to have other opinions. In the end it
makes no difference since the FCC defaulted on the point
and thus rendered the "law" noot anyway.

> The only legal precedent that the Ellsberg case provided was
> that if someone with lots of political clout reveals classified
> information to someone else with lots of political clout but not
> entitled by law thereto, the Supremes have the power to bend
> the law at whim, whether the bending is proper or not.

The supremes can bend the law simply because they are the
supremes. If the vote is 5-4, the majority rules....regardless
of the way you or I may see the legal logic of the majority
opinion. If we disagree, there is NO appeal beyond the
supremes. So far, it has worked pretty well. I have disagreed
with the outcomes of some cases as I bet you have too...but
in the end, it's the best damn system going (IMHO).

> That wasn't the first wrong decision that the SCOTUS made nor
> was it the last.

As I said, I bet you've disagreed with the supremes on cases.

> And I say that as a person admitted to practive before that Court.

So? Isn't there at least ONE attorney in every case admitted
to practice before that Court
that ends up disagreeing with the outcome? (i.e.
the attorney(s) representing the losing side.)

Cheers,
Bill K2UNK

That last clause is a real beauty, Brian. Its meaning is obscured
completely.

I don't consider everything the ARRL does as good for amateur radio
either. I let it be known when I disagree with something the League
undertakes. That said, I believe that overall, ARRL programs and
services work toward the betterment of amateur radio. I see the
League's efforts as positive with few exceptions. Are you a member?

That busting "Illegal" cb'ers is
more important.

Landshark

--
If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

You're really a pain agagon, I don't give a hoot if you freeband (there is no freeband by the way, all those "freeband" frequencies are allocated to other services), but if you want to operate illegally and violate FCC regulations like a criminal, go ahead. My argument is with idiot cbers like you who think it is perfectly OK to operate on the ham bands were the hams have earned the privilege to operate, while the cber has earned nothing. I am definitely anti cb to those people. Also I argue with idiots like you who want to trash ham radio when ham radio is head and shoulders above cb in every respect. The cb band is a total mess, brought on by people like you who have no respect for any rules. The cbers are totally to blame for the sorry state of 11 meters. There are tiny portions of the ham band where certain hams act like cbers, but it is such a small percentage compared to the rest of ham radio it is hardly worth mentioning.

>Of course he is not going to say this in public but the fact that twist >talked with the man direct on the phone. he doesn't care if we have cb >amps or galaxy dx99s ether.

And Riley also said that what twistieboy reported in the news group was only about 10% accurate of what Riley really said.

> Cb will be big business for manufacters once the
> airwaves become free.

In your dreams. If the airways were free, what do you think the radio spectrum would be like? You would not be able to listen to the radio or watch television, because your kind would make the entire spectrum sound just like 11 meters does today. I would really like to hear what you would say if you are someone close to you were involved in an accident but the emergency services could not get to you because of these users of the "free airwaves" where drowning out the communications of the emergency service. How would you feel flying a commercial flight knowing some aaaaauuuuuuddddddiiiiooooo shouting idiot fool with his splatter box was interfering with aircraft communications?
Free airwaves? Your more stupid than I imagined.

>
>

Cocaine is nothing but BAD. The people who say they can control IT are lying to themselves, or don't have the money to spend on it. Been there, done that, got the t-shirt and the record to prove it. It started as a small amount, maybe twice a month,circa1985. Then ecalated rapidly to an eighth of an ounce or more a week. I realize this doesn't appear to be alot to people without jobs, but to a person with a 8 to 5, safety sensitive job, it is alot of missed sleep. At first, the sex was great, did it more ways than the law allows. But this rapidly faded into nothing. The major concern just becomes getting more of the shit. When the supply of powder became harder to locate in this area, crack was always available. So, this became the easiest way for me. Did that for about 5 years before being caught in a suviellance camera and getting arrested. Got 4 years defferred ajudication, meaning that if I don't get in trouble for the time on probation, I will have no conviction on my record. Just recently finished that sucessfully. Actually, in Texas, you can get off probation by doing all your community service(120 hours for me), and doing 1/3 of the time, which I did. Cost of my fun, about $7500 for the lawyer and the probation fees.

You know, the bad part is that I still crave the shit. But, now I know the white monster is always lurking in the back of my mind, and I cannot surrender to the call.

Incidentally, I did lose one friend I grew up with, to suicide, directly related to cocaine. Also, a co-worker aqquired AIDS through the sharing of needles while injecting the shit. That was in the early days of AIDS, when everyone thought they would never get it. He is DEAD now.

In closing, the only real advice I have for anyone thinking of trying the shit is.....PLEASE DON'T DO IT! DON'T DO IT FOR ME, THOSE THAT LOVE YOU, YOUR WIFE, HUSBAND, GIRLFRIEND OR BOYFRIEND. IN SHORT, DON'T EVER TRY COKE. IT IS NOTHING BUT A FELONIOUS WASTE OF MONEY.

I can't make it any more simple than that.

See Ya, Randy

And results still as less in the content level, just more on the
advertisment level. I do not buy a ham magazine for the ads. They are
merely something I have to suffer through to get to the articles I will be
reading. Just as annoying as those incessant subscription cards usually in
the magazines.

Gee... aside from taking that far of a drive, I have to assume there must be some simpler method of finding the same information. Sure, take my money, and not have to justify where it is spent. Love that concept.

Strictly the voice of the B.O.D.

Maybe you don't find
> the fellowship of other radio amateurs of interest.

Sure I do, I get 99% of it locally and a little also from other sources such as these newsgroups and other avenues.

Maybe you have no
> need of any of the various membership services.

About the only service (actual service) I might be interested in other than the magazine subscription would be the insurance, unless they have so many disclaimers and exclusions like my current insurance seems to have.

Maybe you have no
> desire to read QST.

Actually I really enjoy QST, but year after year the content drops and drops. I know this as a fact, as I have from about the mid 70's till this years QST magazines sitting in storage boxes after I have read them and separated the issues that I needed for future reference.
Thanks to the hams that were going to through these out otherwise, as I rescued them from the dumpsters. (before they made it that far....)

>
> Why do you say the "The alleged Field Organization is
> non-existant.... "?

Again, where are they? I have placed myself, by participating in five different clubs, and occaisionally pop in a few others also from time to time, and with the exception of one person (now an ex-field op person) I have not met one representing and acting on the behalf of the ARRL. Mind you, each one of these are a sanctioned ARRL club.

>
> Have you had any need for the field organization?

> the field organization and been refused or otherwise
> turned away?

Not yet as I can say. But there is always the possibilty in the future. But this is one of the so-called "selling points" of the the league and why a person should join.

>
> If the answer is NO, then what do you expect to see, get
> or derive from the field organization that leads you to
> state it is non-existant?

Participation. How about presentations related to the league. How about (for lack of a better term or phrase) recruitment presentations where they actually can clear up and defend these so-called selling points as to why a person should join the league. These are a few as well as I am sure there are others.

I never used the Bash materials. I did however make heavy use of the
ARRL License Guides for all three of my ham exams 1953 thru 1968 or
so. The similarites between the questions in the exams and the
questions in the License Guides was nothing less than striking,
sometimes dead nuts word for word. This game goes back a LONG time and
the ARRL invented it at least in ham radio.

Dick, why do you keep bringing this up? I'm sure that Dave would like
to see the end of it. Just leave it alone.

> So I'm in violation of {something} because I wasn't sitting waiting in the Novice bands for your
> nastiness to show up needing some CW practice. Right.

Who said that? I only said you were AWOL. Poor little Dick, he
cannot accept criticism. And I showed up on the Novice bands with the
best of intentions, not "nastiness."

> And you're a mental gnat, no, gadfly.

Make up your little mind.

> > I'm working on Extra now.
>
> Working???? That's what you call work?

Yes, Dick, "working." What would you call it?

> Lots are doing it these days with a "Get your Extra in a weekend" coaching
> schools. Memorize it all in one short weekend with time off for beer and skittles. Whatta deal.

How much are you making on that deal?

> You sure should be proud.

Why wouldn't I be? Except that once I achieve Extra, I might be
compared to jerks like you.

Why are you so interested in how many posts I have in r.r.cb that
you take the time to look it up? And now you follow me over here
to the amateur group. You have a thing for me? You follow me
around like a little puppy.

Please explain gagnonbutt.

Yes, Dave, I am a member and always have been.

I nearly quit being a member during the pre-restructuring era, as I
felt that I was supporting an organization with an oversized rear-view
mirror that was blocking their windshield. I think that the ARRL does

an overall good job, and is a good watchdog on frequency encroachment.

Brian
ARRL Annual Member (with the option of quitting at any time)

Steve, I saw as harmful the ARRL has promoting the Morse/CW exam
barrier decades after any other service has seen fit to dispose of it
for better methods. I saw as harmful the lack of leadership to the
future.

GW and Dick say it is more dangerous to do nothing than to act. I've
seen the ARRL sit on their hands waiting for a "consensus" concerning
the Morse exam issue, forsaking any leadership role, and instead
running polls like Clinton/Gore.

Yep! Best example I can remember is that the study guide
had about 14 circuit diagrams (full wave rect., colpitts osc., etc.,)
and each was presented as a question of the type: "Draw a
schematic of _______. " Of those 14 schematics
in the study guide, 5 were EXACTLY as stated on
the test for General I took in 1958... a few years before
Bash's efforts.

Cheers,
Bill K2UNK

>Following is a verbatim excerpt of an FCC letter, dated August 9, 2002 from
>the FCC to lawyers representing Reliant Energy, a Texas power utility.

A problem there is the use of an excerpt to attempt proving a point.
Here is the entire letter content:

==========

August 9, 2002

Michael C. Massengale, Esquire
Baker Botts, LLP
One Shell Plaza
910 Louisiana
Houston, TX 77002-4995

Re: Reliant Energy, Incorporated; Radio Frequency
Interference to Amateur Radio Station W5GCX

Dear Mr. Massengale:

This is in response to your letter of June 28, 2002, on behalf of Reliant Energy, with respect to radio frequency interference from the operation of the company's electrical service equipment to Amateur Radio operators.

The Enforcement Bureau appreciates your comprehensive response. However, your interpretation of applicable Commission rules with respect to this matter is in error in several material respects. Reliant Energy is obligated to eliminate the interference complained of.

Your letter suggests that the interference experienced by Mr. Edward J. Gerber is due to an otherwise properly operating 250 kVA step-down transformer. Reliant's proposed solution is to relocate the transformer to another area removed from Mr. Gerber's residence, and that Mr. Gerber bear the labor cost of this relocation.

We are willing to accept your client's analysis that the transformer is the cause of the interference problem; but that is most unusual, since an arc in a transformer would typically result in failure of the transformer within a short period of time. A far more typical cause of radio interference from utility lines is in loose or corroded

hardware, tie-wires, or defective insulators. Furthermore, you cite use of infrared cameras to locate hot spots as a means of identifying noise sources. The small arcs which cause RF interference typically do not cause significant heating, and therefore this may not be the most effective means of diagnosing interference problems. Finally, it is unnecessary in most cases to interrupt the power as a means of identifying the source of noise.

Regardless of the source of the interference, it is improper to attempt to pass the cost of the relocation, or other solution, to the licensee that is the victim of the interference. It is exclusively the obligation of the operator of the unlicensed device. Your interpretation of Reliant's obligation with respect to the Amateur Radio Service is that Amateur stations are not part of any service , and that the obligation to avoid interference to a radiocommunication service does not include Amateur Radio stations, since individual Amateur Radio stations constitute a use but not a service.

The attempted distinction is baseless. The Amateur Service is a radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs; that is, duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest. 47 C.F.R. 97.3(a)(5). Individual licensed stations are each part of this Service. The condition of operation of any Part 15 unlicensed device is that it cannot cause harmful interference. 47 C.F.R. 15.5(b). Harmful interference, which is identically defined in both the Commission's rules and the International Radio Regulations, includes any emission, radiation or induction which seriously degrades, obstructs or repeatedly interrupts a radiocommunications service operating in accordance with Title 47 C.F.R. Reliant Energy is not entitled to cause harmful interference to a licensed Amateur Radio station in the operation of its devices.

Furthermore, you claim that, since 47 C.F.R. 15.13 requires that manufacturers employ good engineering practices to minimize risk of harmful interference, that provision does not apply to Reliant Energy. However, 47 C.F.R. 15.15(b) makes it clear that operators of Part 15 devices are required to cease operation should harmful interference occur to authorized users of the radio frequency spectrum, and therefore parties responsible for equipment compliance should reduce unwanted emissions below the maximum levels specified in the regulations.

Therefore, the position of Reliant Energy, that it is
willing to conduct further investigations or remedy the
interference problem only if the licensed radio amateur
pays its expenses, is unacceptable. Reliant must do all
things necessary, and bear any and all necessary costs, to
comply with its obligations as an operator of unlicensed
devices pursuant to the Commission's Part 15 regulations.
You are hereby requested to provide a written report
within 30 days of receipt of this letter as to the steps
that have been taken to eliminate this interference.
Further enforcement action will be withheld pending
receipt of that report. The Commission expects, however,
a complete solution without further delay, and good faith
on the part of your client.

cc: Mr. Edward J. Gerber
Robby Abarca, Esquire
Advisor to Chairman Rebecca Klein
Public Utility Commission of Texas

==========

The Enforcement Division of the FCC thus supported amateur radio,
in particular one radio amateur who was subject to interference.
That should, in my opinion, be the laudible, not some personal
word-vendetta personal-injury-in-print issue of yours long ago.

The word "service" used throughout Title 47 CFR is a regulatory
term denoting a type and kind of radio transmitting activity.

Brakob wishes to enoble his avocation as some kind of implied
"service to the country" or "service to the community" as if it is
a kind of noble deed. Amateur radio remains almost entirely a
a hobby activity, engaged in for personal pleasure. There should
be nothing wrong with that. What is wrong is the attempt to
enoble the hobby beyond reasonable doubt as a justification for
its existance.

If "service" is taken in the sense as a "service to the nation," then
it should also be applied to Citizens Band Radio Service or even
restricted-radiation devices covered under Part 15. It isn't. As
used throughout Title 47 CFR, the word "service" is a regulatory
term denoting a type and kind of radio transmitting activity.

My first Radiotelephone license was issued from Washington, DC, a
couple weeks after my Chicago FCC field office test in 1956. Renewals
were handled by the Long Beach, CA, office but those might have had
rubber-stamp-signings of Hayes and Mary Jane Morris.

The first CB licenses were issued from DC. As I recall, only the
Restricted Third Class Radiotelephone license was issued at the
FCC field offices (no test required)...such as was required by
student pilots flying out of tower-controlled airfields.

I guess all that license rigamarole is very important so that control
freaks can go bananas about the evil unlicensed-but-legal radio
users. :-)

Those aren't good words to write in here. This newsgroup isn't
about reality. It's all about a time warp.

N2EY wants everyone to believe that "real" radio operators are of
the 1930s and 1940s state of the art. Never mind that Suisun Bay
is still an impressive sight (or was last year on the way to Antioch),
they are still out of service with a future for the scrap heap...similar
to the old regulations concerning US amateur radio.

US amateur radio expertise is all about CW on HF for DX.

Hello Brian,

No, I don't "log in under Jim Haynie's ID" but I have exchanged reasonable
e-mail correspondence with him. President Haynie doesn't call anyone
"Putz" or disparage another just because of an opposite opinion. :-)

Traveling is over for a while, now it's time for all the 1x2s to get their
jollies by calling "civilians" names, explain how they are all so
superior to ordinary mortals by long tenure in a hobby radio activity.

It's interesting to see what these morsemensches invent for "replies"
to others. Truly a remarkable talent they exhibit in fabrication! Now if
they had spent more time in advancing the state of the amateur art
US hams wouldn't have to look to Europe or Asia for the new amateur
radio technology. Alas, it is all frozen in the time period when all those
1x2s were first licensed and they keep insisting that all others must
emulate them.

If you want an in-bred group of boosters giving each other high-
fives over marvelous, noble accomplishments in a "service," then
by all means close the newsgroup via a moderator. Allow only
those who have group-think mentality and believers in some
faith of myth and legends. That way all those who have a certain
mindset will be happy and undisturbed.

In the meantime, controversial subjects remain controversial and
the regulators listen to all citizens, licensed or not.

Those who cannot stand controversy should not access this very
open newsgroup. It's obvious that some others cannot stand
controversy or opposition to their cherished self-importance.

> future.

But the leadership ISin control (i.e. selected) by the membership.
Who's fault is it that few ran for elected positions in the regions
on an anti-code test agenda? The reality of ARRL
membership was that the majority DID favor retaining
code testing...and that's what the ARRL board advanced
until recently.

> GW and Dick say it is more dangerous to do nothing than to act. I've
> seen the ARRL sit on their hands waiting for a "consensus" concerning
> the Morse exam issue, forsaking any leadership role, and instead
> running polls like Clinton/Gore.

There has never been consensus and probably won't
be for years to come. In the end, the FCC appears
to have forced the issue via NPRM98-143. Overall
comments to that NPRM favored the lowering of
code testing. Odds are the percent in favor
of ending all code testing increases daily.

More to the point, the majority opinion doesn't
get their say in the area of license requirements since
the critical decision is based on public need for
any specific license requirement. Clearly the FCC
saw NO public need for any morse testing and stated
it as such in their R&) on 98-143. The only rational
that sustained any code tesing was the treaty requirement.

Cheers,
Bill K2UNK

3920. Re: ARRL Members -- protest this action to your director

Let me wade in folks. As a life member of the ARRL I would like to answer the question of what did the ARRL do harmfull that effected me...etc.

In 1968 the ARRL in conjunction with the FCC and at the protest of many active hams went ahead and initiated 'Incentive Licensing'.

The direct and immediate result was my losing half of the HF privledges I had already earned.

And to this day I feel this move was the single most detremental thing I have ever seen the ARRL do to Amateur Radio. That is the year I resigned in protest.

I seriously doubt that any of the original 1X2s are still alive. Some obtained those callsigns in the early 70s when the FCC allowed the extra class hams access to 1X2s (I had, for a while, N2JH - but let it expire). The test is so simple that kids under the age of 10 can pass 'em. All you need for that 1X2 now is a couple of buck$, but not much (assuming that one is available; otherwise you have to wait for someone to die or abandon the callsign). Geeze, you keep talking about that state of the art PLC program - I'm gonna have to fire up the A-B slc500 on my bench and see if I can plop a CW receiving/transmitting program into it. Just key a bit (in or out) and do some math and send/receive the results out of the serial port. ;)

73 from Rochester, NY
Jim AA2QA

ps - A-B plcs are about the most susceptable devices I've run into as far as noise, yet they apparently have passed CE mark compliance. Go figure.

I would have assumed that substituting a Farnsworth exam for the Part 97 mandated Morse exam would have pushed the boundaries and raised some eyebrows at the FCC. But no. There is far greater latitude that only the QPC and VEC can explore if they choose to do so.

> >> >> The most recent being the change in the code exam from 5 WPM

And the answers to the Extra exam are no secret. So do you assume that all Americans are Extras? OK, that's pretty broad. Lets narrow it down. Do you assume that all prospective amateurs have Extra class knowledge?

Yet it was only last autumn that the ARRL told the world that they had been administering the Morse Exam using Farnsworth at 13-15WPM for the past dozen years.

Yes, yes, its no secret. Hi hi.

And the ARRL responded by offering college credit-like courses to make up for the "dumbing-down" of the ARS.

But notice that they haven't offered any Morse/Farnsworth courses.

Why did they defend Morse/Farnsworth testing and were prepared to shove it down our throat - against our will, and now don't even offer a college course on it?

Makes no sense to me.

In what decade did the ARRL offer that one up? Two decades after it was a
no brainer?

The FCC just didn't want to fool with it twenty years after the fact. It
will just have to wait for S25 to go yogi.

JJ explain why if the freeband is against the law then why isnt it being used by the so called riteful owners? I have never heard one real station on there. The way i see it if they wanted the band so bad why didnt they defend it? If someone is stupid enough to leave the keys in their car and then not complain when its stolen then they deserve to get it stolen. There is nothing wrong with making use of abandonded frequencies and besides the FCC does not care about freeband its like a parking ticket and no matter how you try to spin it your wrong.

Whoa! I'm still kicking, though not as high as once upon a time. I am the first and only issue of W0EX.
But your point is well taken. 1x2's were not issued for many years beginning sometime in the 20's or early 30's. And the zero district wasn't created until after WW2. I got the call, assigned sequentially by FCC, in the 70's, as you said. It cost me not a dime, nor does it still. NOT a vanity callsign, that is a term which came about as result of vanity license plates for cars. Back then 1x2's were known as "preferred callsigns" since they were shorter.

>can plop a CW receiving/transmitting program into it. Just key a bit (in or
>out) and do some math and send/receive the results out of the serial port.
>;)

I wasn't referring to any "state of the art PLC program."

I was referring to the genius types who claimed that
programmable logic controllers (as used in industrial
process control) are the epitome of programming and
that "all electronics professionals" should "know" all
about them or not be considered "knowledgeable."

Last I looked in an industrial electric equipment catalog
they weren't inexpensive nor small nor something that
every electronics pro should know about. What are the
advantages to using one as compared to a Microchip
PIC?

>ps - A-B plcs are about the most susceptable devices I've run into as far as
>noise, yet they apparently have passed CE mark compliance. Go figure.

I doubt if Allen-Bradley (?) products are a discussion item in
here or whether or not they, or any other PLC, are RF-proof
to work in the presence of an HF transmitter RF field.

I am sure, indeed positive, that some in here will now get busy
and shout down this posting and continue to claim that "all
electronics pros should know all about them." Funny, there
hasn't been a single item about them in RF Design magazine,

nor Microwaves & RF magazine. Those freebie professional
trade publications must be deficient in their knowledge, ey? :-)

>> We call them "free-loaders".
>> ---
>> 73 de K2ASP - Phil Kane
>> ARRL Life Member

Phil;

The League has strongly influenced getting into amateur radio in
the USA for years. In so doing they have set the stage (so to
speak) to almost force the retention of the code test.

There are an untold number of interested citizens who might like
to try amateur radio but just cannot see the necessity for that
beloved code test. Some of those are radio professionals with
some experience in radio...other than myself.

ARRL won't allow voting membership to those without a license
so it has been a case of always accepting the entry standards
as established (and maintained by influence). That has resulted
in US amateur radio as being almost the only radio service
requiring morse code skill to pass a test to get into ham radio...
and thus meet voting membership privileges of ARRL.

I'm wondering how in the heck non-voting non-members can
possibly be called "free-loaders?"

ARRL strongly influenced the standards for the ARS on the
basis of the movers and shakers within the League. Until the
advent of the Internet the FCC didn't have much input except
from ARRL. Non-members of ARRL just didn't have much say
in the matter, did they?

Wonderful circular pre-defined "free-loading" there, counselor.

Beep, beep.

No, I like intelligent discourse. I really enjoy it when a person can
articulate an opposing viewpoint in a manner that is not insulting, and
can state their ideas in a manner that can make a person think.

> Allow only
> those who have group-think mentality and believers in some
> faith of myth and legends. That way all those who have a certain
> mindset will be happy and undisturbed.

That would be pointless in a group devoted to policy.

> In the meantime, controversial subjects remain controversial and
> the regulators listen to all citizens, licensed or not.

Let's have an example:

Brian Burke and I have many differences in opinion. But we can maintain a civil tone regardless. You are an intelligent person. Observe, study, learn.

DO you wish to convince?
DO you wish to play a game of argue with the text on your CRT screen?
D0 you want to just argue?

It is your choice. The evidence that I have seen so far is that you just like to argue, and you like to do it in an insulting manner, which if you really do want to convince people that your position is correct, is quite detrimental to your purpose.

Of course, if you just want to argue and anger people, keep it up, you're doing a great job. Of course, that puts you in the same league as some of the CB'ers in the group who post the nasty notes to each other.

It is your choice, kind sir. If you think I'm wrong, you know how to prove it! ;^)

Although one will also be ignorant if one is stupid because, being stupid,
one will never have any possibility of learning and is therefore condemned
to lifelong ignorance. Also, stupidity provides a reasonable excuse for ignornace although
this may not be accepted in a Court of Law. There is a high
probability of many stupid truckdriver freebanders on 11m and 10m of being fined.

Hey NTI, we never hear you on 75 meters anymore. No great loss. Was that the result of
choice, ignornace or stupidity HA HA HA

anonanonanonanon

No, I meant it just that way. You see if your ignorant then that means
there is a possibility of learning.

This guy is stupid.

Hey Brian, I obtained a call sign in the Philippines (KR4AJ/DU7) and I had to fill out forms in quadruplicate and pay a fee. Then I had to interview with a deputy to their chief of communications in a government office. The deputy wore a military-style uniform. There were military guards at the Communications office entrance in Cebu city. I see nothing out of order with what K8MN says. FWW, the Philippines is a scattering of Islands and knowledge of Morse cord is known fairly well amongst the population because they receive maritime studies in their education. They do not waste their knowledge, either. Teenagers use it with their cell phones to send low-cost messages to each other. You would probably hate it there with all that beeping going on in the malls and not understanding what was going on. However, you wouldn't hate it too much because they do not seem to use farnse. Forty meters ham bands seemsto be all CW during the day, beeping away in the Cebuano dialect. I love it. CW heaven! In the USA, we just spend money and expensive rice boxes and linear amps so that our SSB can get

through. Which type of linear do you use, Brian?

If I have to explain it to you then you really are more stupid
than I imagined. What do you mean "if the freeband is against the
law". It is against the law moron. You do not have a license or
permit to use those frequencies. You cannot transmit on any
frequency you want to just because you don't hear anyone using
those frequencies. The frequencies between channel 40 and 28.0 you
call the freeband are allocated to other services and it matters
not one whit if they are being used are not. You are not
authorized to use those frequencies. How do you know it isn't
being used, just because you don't hear anyone there doesn't mean
it may not be in use. Do you monitor those frequencies 24/7?

> If someone is stupid enough to leave the keys in their car and then not > complain when its stolen then they deserve to get it stolen.

There you go describing yourself. BS. You have never accidentally
left your keys in the car? And if you did and someone stole it you
would be one of the loudest complainers to get the sorry SOB that
would do such a thing. I should be able to leave the keys in my
car anytime and not expect to get it stolen, the problem is there
are too many people like you who would take it just because they
can, so we have to have laws against auto theft and I have to lock
my car as a precaution, all because of idiots who think like you.
Same attitude you have about the frequencies outside of the cb
band. Just because you see something that it may appear someone
else isn't using does not give you the right to take it. You sound
so typical of the illegal cber.

> There is nothing wrong with making use of abandonded frequencies

According to your thinking maybe, but it is still illegal. Illegal
is illegal no matter how you try to rationalize it.

> and besides the FCC does not care about freeband its like a parking > ticket and no matter how you try to spin it your wrong.

How do you know they don't, have you spoken directly with the FCC
and they told you in person they don't care about those
frequencies? If they don't care about it, then why have they
issued NALs against some "freeband" operators?

And no matter how you spin it, it is illegal. Why are you such a chicken chicken bander you have to hide behind an anonymous remailer?

There's a good reason for that. See below.

> This game goes back a LONG time and
>the ARRL invented it at least in ham radio.

No, they didn't.

The study guides in the old ARRL License Manuals (at least as far back as 1948) were not written by ARRL folks. They are just reprints of the FCC study guides, and are identified as such in the LMs. The study guides stayed in essay format long after the tests became 100% multiple choice.

you guys run away when its anything less than 5/9. we freebanders are hammering out to the pacific long into the night while ten meters is silent. dont you think the arrl and the FCC see we are making better use of the bands? most of these dick head hams in here are no codes, you guys would be better off picking a 6 meter freq and hoping for whats left of the cycle to do some magic if you want to work most of these idiots. thats why the FCC not only dont bust freebanders but they look to us as the future of the hobby. look at Rain report they are all hams being popped. Ham is dieing and nocodes like JJ can only sit and bitch like fat old men.

No doubt about it, I made a small error on this one. I should have said 1x2 callsigns starting with "W" or "K" - and then excluded some of the later call districts! As far as the 1X2 access, I'm not sure about the date at all. I obtained WA3RJX when I moved to Pennsylvania after my 4 years of duty in the US Navy. When I moved back to New York, the callsigns were available. It was at that point I selected N2JH (which, as I mentioned before, I let expire sometime in the very early 80s). Heck, we should start something. Maybe we could get 1X1 calls (currently reserved for special event stations) available for a more immodest fee (say $1000 for a 10 year term). Myself, I'd like to get the call "W". Just "W". I'll accept donations for this one as I'm sure it will be expensive. Just in case the FCC doesn't accept this idea, I can assure you that any and all donations will be put in the "M for M" fund (money for me).
;)

Ham is dieing and nocodes like JJ can only sit and bitch like fat old men.

Sorry to disappoint you again agagnon, anonymized illegal operator coward, but I was licensed long before no-code was ever thought of and sat in front of an FCC examiner to take my test. Probably even before you mama was cleaning out your dirty diapers. At least the no-codes have a license, more than you can accomplish.

> No, I like intelligent discourse. I really enjoy it when a person can
>articulate an opposing viewpoint in a manner that is not insulting, and
>can state their ideas in a manner that can make a person think.

Sorry, but I disagree based on years of seeing the first of the
message exchanges on the ARPANET, then USENET before
the Internet was open to the public.

There is always a group which has preconceived ideas of "right"
and "wrong," mainly that their personal viewpoints are the only
ones "right" and any opposition is "wrong." They tend to come
unglued quickly and resort to the primitive. :-)

In here there is a group of regulars who are devout believers of
ARRL, that the League can do no wrong. That's a preset "think"
attitude since they "think" only in the jingoism of the League's
output. Questioning anything of ARRL output is automatically
a sentence of heaped abuse on anyone daring to say anything
negative against the League. That isn't intellectualism, it's just
cultism and the adoption of amateur radio as some sort of life-
style. That kills "discussion" right there.

ARRL output is automatically a "high-fives" area of self-congratulation
and the believers and cultists should really confine themselves to
ARRL website and editions of QST. Quite often this newsgroup
turns into an "us against them" non-debate with name-calling,
taunting, and outright insults at anyone daring to say the least little
negativism to their sacred viewpoints. This happens in other news-
groups concerning different subject matter, is a part of the newsgroup
environment that will not change.

>> Allow only
>> those who have group-think mentality and believers in some

>
> That would be pointless in a group devoted to policy.
>
No, it is a way of preserving peace and tranquility. With everyone
of the same sect/belief/viewpoint, there is little discord and that
only over minor matters.

Any open public-access forum is bound to have discord from time
to time. It's the environment of computer-modem communications
and the time-delayed interfacing of human beings. It's been that
way since ARPANET on through BBSs and BBS nets to USENET.

In a way, it is strong Darwinism in full force. The strong, or rather
those that are acquainted with the environment, will survive. The
weak may adopt bombast and childish activity or just quit access.
Most who can't take the environment will quit.

A moderated newsgroup insures that the "weak" will not survive
long. A closed newsgroup insures a population which all get
along...but that leads quickly to inbreeding of "think" into certain
ways.

> Brian Burke and I have many differences in opinion. But we can maintain
a
>civil tone regardless. You are an intelligent person. Observe, study, learn.

Been there, done that, have recycled lots of T-shirts.

What makes you think your own words are still civil? As you go on
in this message, you are sounding somewhat uncivil.

> DO you wish to convince?

How does one do that among cultists and believers? Not practical.

> DO you wish to play a game of argue with the text on your CRT screen?

Not hardly. I have a better sense of the unseen readers than most of this newsgroup's inhabitants. That comes from a lot of computer-modem communications experience and meeting many of the communicators face-to-face in a social environment for 18 years.

There's an even stronger identification between screen and person when one becomes a sysop on a BBS.

> D0 you want to just argue?

I'm just making statements based on experience. YOU are pressing the argument here. :-)

Many policy issues are controversial. Controversy is not pleasant and can lead to all sorts of nasty things happening.

> It is your choice. The evidence that I have seen so far is that you just
>like to argue, and you like to do it in an insulting manner, which if
>you really do want to convince people that your position is correct, is
>quite detrimental to your purpose.

In other words, you want me to shut up. :-)

If I am "supposed" to endure a series of personal insults and yet be gentlemanly, then you have a strange way of requesting it.

The only result of such acquiesence is usually taken for a weakness, timidity. It doesn't convince the one who is doing the personal insulting. It doesn't stop the insults. Those neo-sociopaths will continue with however they perceive is weak. It lets them take out their daily frustrations on someone unknown to them except for words on a screen.

In a strange way, that may be beneficial to the insulter, directing their anger to some object. It's a way for them to let off steam without physical danger. On the other hand, it can get out of hand as witness one pointless little diatribe done on an AOL homepage. [short-lived, but rather vicious]

> Of course, if you just want to argue and anger people, keep it up, you're
>doing a great job.

Anyone will anger those whose minds are closed to discussion and oppose the closed-mind ones' viewpoints.

What you don't recognize is that there are a great number of readers out there who never post anything in public. They are influenced by different viewpoints and may start to think and take action. That's fine by me regardless of their conclusions.

I wouldn't hope to change minds of those who are cultists,
believers, life-stylers, or just of closed minds.

>Of course, that puts you in the same league as some
>of the CB'ers in the group who post the nasty notes to each other.

I've heard 44 years of the "evils" of CB from code-loving long-
timers who have to have federal licenses for everything. It is
nothing new. Please try something original.

It doesn't "put me" in any sort of "league." That is your own
personal interpretation. Tell us why YOUR interpretation is the
only "correct" one and mine is "wrong." Go for it.

> It is your choice, kind sir. If you think I'm wrong, you know how to
>prove it! ;^)

What "proof" has been presented? These are just objective
statements. Cultists, believers, life-stylers in amateur radio
won't be convinced of anything. ARRL has set their minds
already even though those won't admit to it. They will
immediately launch some diatribe of their own saying that
I am "mistaken," "wrong," or just plain undesireable. :-)

What you seem to object strongly to is anyone who has strong
resolve and fortitude to challenge the status quo and closed
mindsets of the cultists, believers, and life-stylers. It is for just
such persons that I suggested a closed, moderated newsgroup
to preserve the peace and harmony of group-think.

You will never have group-think in a public-access newsgroup.

Think on that, group.

Beep, beep.

It's been at least 34 years and a helluva lotta water over the dam ago
since I've even seen an LM but as I recall the LMs did have
multiple-guess questions as did the exams. The LM posed the question,
then laid out four (?) possible answers to ponder then told ya which
one was correct. I recall that the wrong answers in the LM also often
showed up in the exams. Or something, ancient trivia at this point.
Whatever the format actually was or who done what the LMs worked quite
well as far as prepping for the exams were concerned which was all
that really mattered. And nobody had to trudge thru anywhere near as
many questions as I understand the current question pools contain.
Novice to Extra all in one skinny ARRL book, worked for everybody.

"I saw you at the last Hamfest I went to. Your belly hung down over your belt buckle, completely covering it. you hadn't shaved in days. your glasses were like the bottom of Coke bottles and you stunk from not having bathed in days. Most prominet though, you had your ham call letters on your hat, shirt, name tag, six places on your vehicle, and you were handing out qsl cards even to people who didn't want them. Then you waddled over to the snack bar for the fifth time in the last three hours, where you stuffed greasy nachos down your mouth, while cheese dribbled all over your filthy shirt. Yup, definitely saw you at that Hamfest, a "typical" attendee at any hamfest you go to these days!!!!"

I was also at that Hamfest. You might have seen me there. I'm a 45 year old Extra and I don't have a fat belly (as a matter of fact, I have a very flat one) I guess that's because I play tennis and golf (to an 8 handicap). I try to stay away from fast food as much as possible, but I do enjoy the occasional chili-dog or hamburger and fries. I usually where a hat, but it doesn't have my callsign on it , it says Titleist. Clothing?, usually slacks and a nice Greg Norman golf shirt with Bass or Rockports. (which probably cost more than your entire wardrobe) But don't despair, maybe one day, you too can be a typical Ham. You see, good Ham equipment (like a good set of clubs) isn't cheap. (like you) I would say that the average Ham has thousands of dollars worth of equipment in their shack (even if they built most of it) To say nothing of the time and money spent learning their skills. Most of the Hams that I know take great pride in their personal appearance. This includes their home, vehicle, and station. Unfortunately, I can't say the same for most of the CBrs I've seen. (like you) I know, the truth hurts. But in the end, the truth always seems to come out. BTW, didn't I see you behind him in that snack line?

All true. It has to do with the way the mental health regulations have changed.

Once upon a time, anyone who was diagnosed with certain mental illnesses (like paranoid schizophrenia) could be institutionalized indefinitely based on threatening/violent behavior. If a family couldn't or wouldn't pay for a private mental hospital, the patient went to the state mental institutions. Byberry, Norristown, Haverford State were the local ones I know of.

Once committed, a patient had to prove to the docs that they were 'cured'. Act up again and it was back to the locked ward.

Then along came new medications like Thorazine which effected dramatic changes in those afflicted. And there also came budget-cutting politicians and advocacy groups. Result was that long-term involuntary commitments disappeared, replaced by short-term commitments and agressive treatment with drugs.

And by the 1970s you had a revolving-door mental health system:

1) Patient does something that gets them committed for 30/90 days (usually involves danger to self or others)
2) Patient gets treatement, including drugs that control the behavior
3) Patient promises to keep taking the medication and keep coming back for appointments with psychiatrists.
4) Court rules patient cannot be held beyond term of initial commitment because he/she no longer poses any danger to self or others.
5) Patient stays OK for a while, but eventually stops taking meds and goin to appointments.

6) Patient's behavior detiriorates until they wind up at 1), above.

Seegrist was a classic case of the person who heard voices and had a distorted reality view that led to violence. Her family tried for years to get her committed but the law was against them - ol' Sylvia would get some treatment and would be deemed "no threat" by the court and released. All in accordance with the new laws.

I have copies of the ARRl LMs dated 1948, 1951, 1954, 1962 and 1971. Pretty good coverage of the period from just before the end of the old ABC system, through the 1951 restructuring and the 1953-1968 "Generals get everything" time, into the Incentive Licensing era.

>The LM posed the question,
>then laid out four (?) possible answers to ponder then told ya which
>one was correct. I recall that the wrong answers in the LM also often
>showed up in the exams.

All of the ARRL LMs are in the old small format (6-1/2" by 9-1/2") - and they all have nothing but essay questions. No multiple choice, no wrong answers.

The Ameco guides were multiple choice.

>Or something, ancient trivia at this point.

Just trying to keep things accurate. The ARRL did not have access to anything secret - they just reprinted the FCC study guides, and also a lot of info about the license process, and all of the amateur radio regs of the time. .

You could order the FCC study guides direct from the govt. printing office if you didn't want to give the ARRL fifty cents or so.

>Whatever the format actually was or who done what the LMs worked quite
>well as far as prepping for the exams were concerned which was all
>that really mattered.

Yes and no - depends on what kind of learner a person is. Point of the study guide was to indicate the subject matter in the test.

>And nobody had to trudge thru anywhere near as
>many questions as I understand the current question pools contain.

Yup. But you don;t have to trudge through all of them. Much of the Q&A pool is simple variations on the same problem. They take a basic Ohm's Law problem and vary the numbers a bit, result is 10-20 Q&A that are only diferent in the numerical values.

>Novice to Extra all in one skinny ARRL book, worked for everybody.

Not everybody used those books. And I knwo folks who went back many times to pass the tests - the writtens, not the code. I knew one guy back in the '70s who needed 10 tries to get the Advanced. Sometimes he missed by a single question. He did not use Bash books, either.
>>
>Anybody who thinks that any of this Q&A "stuff" is unique to FCC radio
>licensing oughta see the detailed Q&As ya can buy to prep for the
>state Professional Engineer's exams.

Yup - they are actually made from old exams.

Most important point is that FCC has been doing the public Q&A/VEC/QPC system thing for almost 20 years now (1983) and it sure doesn't look like they see any reason to go back to secret tests.

Go back and read my question, Brian.

I asked you what had the ARRL done to impede YOUR operating of an Amateur Radio station.

>I've
>seen the ARRL sit on their hands waiting for a "consensus" concerning
>the Morse exam issue, forsaking any leadership role, and instead
>running polls like Clinton/Gore.

Hot flash, Hot Rod...ARRL is a membership organization. They are supposed to represent US, not the other way around.

Now, I reiterate my question....WHAT has the ARRL done to impede YOUR ability to operate an Amateur Radio station?

Steve

I'm not gonna get into this one again, but I'd wager that none of them has a pool of the exact questions and their exact answers with the key to which offering is the correct one in
every instance, as the amateur radio pool does.
I KNOW from many years of VE activity where many of the examinees were known to me that often
there is licensing without anywhere near sufficient learning. I also know that there has always been licensing without enough learning, and I know that the present system seriously exacerbated that.

Is any of this a problem? FCC evidently doesn't think so. Maybe they also think that licenses
themselves will become superfluous, and allow it to become one DC to daylight CB band.

Dick

Perhaps the FCC thought the case would be lost. But it seems to me that a far more reasonable possibility is a combination of several factors:

- FCC top dogs didn't want to bother
- FCC was internally considering something like the VEC system
- Action against Bash would have admitted that his books were accurate copies of the real tests, and shown how few versions of the real tests actually existed.

>the question of what did the ARRL do harmfull that effected me...etc.
>
>In 1968 the ARRL in conjunction with the FCC and at the protest of many
>active hams went ahead and initiated 'Incentive Licensing'.

FCC enacted the changes, not the ARRL. There were various proposals from 1963
onwards. At least 10 of them that were not from ARRL got RM numbers.

Were you a part of that process?

Many active hams were FOR the proposals, by the way. In fact, a very slight
majority of opinion favored it.

>The direct and immediate result was my losing half of the HF privledges I
>had already earned.

What license did you hold in 1968?

If you held a General or Conditional, you lost about half of the PHONE
priviledges on the 80, 40, 20 and 15 meter bands. 10 meters was unchanged. You
also lost 25 kHz of CW/data on each of those bands. Total of about 100 kHz
CW/data and 325 kHz 'phone HF privs out of a total of 1,450 CW/data and 1,850
kHz 'phone available back then on the US amateur HF bands. Works out to a lot
less than half of your privs.

If you had an Advanced, you lost the same CW/data but much less 'phone.

Sounds to me like you (and many others) assumed that when you got your General
or conditional licenses that you were somehow guaranteed full operatin
privileges by right, forever. FCC disagreed.
>
>And to this day I feel this move was the single most detremental thing I
>have ever seen the ARRL do to Amateur Radio.

FCC wanted incentive licensing. ARRL actually got them to tone down their 1965
proposal.

>That is the year I resigned in protest.

And by doing so, lost your voice in that organization.

I remember those times. I was a new ham (Novice in 1967, Tech/Advanced in 1968,
Extra in 1970). I had full privs for a few weeks in the fall of '68 and then
lost them Nov.22. Got them back when the two-year wait for Extra was up.

What surprised me most was how hard the exams were reputed to be, while in reality they were just not that tough if you knew a little radio. We had 12-year-old Extras back then, so when I got Advanced at 14 and Extra at 16 it wasn't unusual at all.

Of course NOT, Dick. Then you wouldn't be able to be so superior to all the
newcomers.

daylight CB band.

They could care less if the ARRL substitutes a 13-15 wpm Farnsworth exam for
the Part 97 mandated 5wpm Morse Code exam.

They just hurt themselves and the rest of amateur radio when they do so.
They'll either figure it out or they won't. Actuarial tables will take care
of it either way.

Brian, we know where you've been - time to get it out and take a good look around. No, it's way, way past time.
It would appear that anyone who thinks the ARRL was responsible for incentive licensing lived a dream instead of history. If you find that hard to believe, its because thats the way you want it. Read the archives of NPRMs and proposals of that era if you really want to know the history. ARRL's view of the restructuring of the day was very different indeed than what the FCC wanted, and eventually enacted .

Good luck with the actuarial tables. Meanwhile, be very careful out there in the big bad world. And should you actually make it, more good luck on the application. Family members have priority, you know.

I *KNOW* I'll never have to take another exam - just as I have never yet had to take one. Among the many things you missed was the notation that if there had been a Super Extra class license created, I'd already have that, too.

Sorry about you're decades-long Jihad of selfflaggelation.

Hmmm. 1968? I was 10 years old living at Loring AFB, ME. Why?

> It would appear that anyone who thinks the ARRL was responsible for incentive
> licensing lived a dream instead of history.

So the ARRL didn't support the inception of incentive licensing, ANY incentive licensing, and hasn't supported the practice of incentive licensing for the last 25 years?

If you find that hard to believe,
> its because thats the way you want it. Read the archives of NPRMs and proposals
> of that era if you really want to know the history. ARRL's view of the
> restructuring of the day was very different indeed than what the FCC wanted, and
> eventually enacted .

It would appear to Brian that the ARRL has embraced inventive licensing and has run with the ball for the past 25 years.

Yet you have a license, at least that is what you are claiming. And never
had to take an exam?

Must be related to King Hussein.

> Among the many things you missed was the notation that if
> there had been a Super Extra class license created, I'd already have
that,

How would you get that Super Extra Class license if you've never taken an
exam?

> Sorry about you're decades-long Jihad of selfflaggelation.

Is that anything like self-congratulation?

Dick, you just don't make sense anymore. Not that you ever did.

Darwinian Evolution...the hard way. :-)

Some in here are terribly insistent on preservation of the past, almost
to the point of continually living there. The past is a known quantity.
The future is unknown, may appear to be frightful, and should be
avoided lest the inner person is disturbed emotionally. Disturb that
inner person and the outer one rages in protest to new ideas and
concepts.

>> It is better to yield, go with the flow, follow the program and not
>> upset the self-styled leaders of the pack. That way they aren't
>> upset and they can retain their self-important image of expertise.
>
>I'm not the least bit interested in protecting and/or furthering their stale
>ideas of pecking orders or worship of single-mode madness.

Neither am I but some in here insist on pack leadership by strict obediance to their personal desires. Others want peace and quiet that results from a common group think. Either one is a safe haven for those that cannot keep up with a constantly-changing technology environment.

US amateur radio had become an almost Byzantine structure of rank-status-privilege that resulted in three decades of overt class distinction. It was a strange and somewhat unattractive arena for what was essentially a hobby activity supposedly done for personal pleasure. The "pleasure" was modified in three decades to be that of personal superiority over "lesser" licensees...thus losing many that had an interest concentrated on technology.

One of the results of that three decade period was a remarkable lack of innovation by the already long-term US licensees. The Asians and Europeans took over innovation and trying out new methods and modes. US technology experimenters turned away from amateur radio as an arena for innovation and discovery. Meanwhile, the already-established licensees kept promoting the standards and practices of their youth as the standards and practices for all newcomers to emulate. Not a good situation.

By 1998 a sort-of flashpoint was reached and NPRM 98-143 was the catalyst for change. The minority leadership of ARRL could no longer exert near-absolute influence on FCC amateur radio matters. ARRL could not be in near-total control. The amount of rationalization for the old ways was approaching legendary proportions as long-timers vainly tried to hold on to their desires of youth. Rage was upon the royal long-timers and they insisted their hobby activity was an almost noble service to the nation just in its existance. Rank-status-privilege coupled with tenure has that effect. :-)

Once rage is enacted, there is no stopping the enraged. QED from things such as the infamous "No SSB International" web-site satirically decrying NCI. NCI remains, No SSB International is gone as is the short-termed Eric June organization. RIP.

No matter. The regulars in here remain steadfast in defining US amateur radio as "CW on HF for DX" and that is that. :-)
Believers, cultists, and life-stylers live by the sayings filtering down from Newington, the ultimate temple of US hamdom.
They don't want new things for the future, only in the preservation of the past. The past is a known quantity and they are secure in that experience. The future is unknown and this bothers them. They won't look at the future, don't want to see it, but struggle to pay lip-service to it because that is politically correct.

Suggestion of change or even hinting at loss of their beloved rank-status-privileges will enrage the regulars more than ever. Regulars don't want to see that.

Beep, beep.

Are you saying ARRL did not lobby the FCC in 1968 nor exert any influence
to install incentive licensing?

If so, a lot of ARRL membership money was for naught in paying billings to a DC communications law firm and lobbying service. If you believe what you wrote, you should demand an accounting from ARRL.

>If you find that hard to believe,
>its because thats the way you want it. Read the archives of NPRMs and
>proposals of that era if you really want to know the history.

Interesting. Carroll has spent time in the FCC Reading Room in DC and studied this matter? Please forward your notes from that study and give everyone the benefit of your research.

>ARRL's view of the restructuring of the day was very different indeed
>than what the FCC wanted, and eventually enacted .

How "different?" Was it called "restructuring" then?

Please elaborate the "differences" for the benefit of all. I have no desire to trek all the way to DC and spend time in the Reading Room on a matter that happened 34 years ago.

What other influential special-interest groups were petitioning for the "incentive plan" back then? As far as I've heard, ARRL was the only one...feel free to correct me with names of such organizations besides ARRL.

By all accounts in amateur periodicals and from many amateurs, the "incentive plan" resulted in a complex rank-status-privilege structure responsible for the overt class distinction situation that plagued US amateur radio up to the year 2000. The R&O known of late 1999 popularly as "restructuring" streamlined the license structure. How did the 2000 restructuring affect your personal operating privileges? Were they reduced?

Dan Finn reports his privileges were lessened. So have many amateurs who were licensed in 1968. Why are you so concerned with "correcting" those who lost privileges?

Like who?

I've been an Extra for almost 32 years, and I've never made that assumption. The period when Generals got all operating privileges was less than half that time (a little less than 16 years, actually).

>Dick believes he'll
>never have to take another exam.

That's exactly one out of over 100,000 current Extras.

Perhaps it's a reasonable assumption. The Extra license, as we know it, has existed since 1951. The only Extras who have had to take more tests to keep their amateur privs are those who:

1) let their licenses lapse beyond the grace period
2) lost them by violating FCC rules
3) caused the FCC to scrutinize them because of questions about the testing process.

>>
>>
>I didn't have to put up with that. I took the whole Novice test at one
>sitting and the license took a number of weeks to arrive but it wasn't
>more than six weeks.

From '51 to '54, if you lived within 75 miles of an FCC exam point, you went there for all classes of license test. Result was lots of work for the examiners. In '54 they made Novice and Tech by-mail for everybody, even if you lived in the shadow of the Custom House.

The various mail and processing delays I mentioned reduced the number of tests the FCC had to process. They also acted as an incentive to be really well prepared, because if you flunked the written you wouldn't even know it until weeks later, when the failure letter came from the FCC. Then you'd have to do the whole dern thing again, code and theory. A lot worse than Joe Squelch saying "come back in 30 days, kid".

>Novice kids were just part of the herd on exam days, whatta zoo.

They cleared that out in '54.

Don't laugh!. Many of the commercial dealers had printed info
sheets on how to "open up" commonly sold Kenwood, ICOM,
Yaesu, etc. equipment. Of course, it was not sitting on the table in
the open, but all you had to do was ask. I asked one dealer for
an info sheet, telling him I was buying the ham gear to convert to
business band use. Sure enough, he handed me a bundle of info.
Then, I asked if this was legal, and the guy says oh yeah, the FCC
deregulated everything years ago, you don't even need a license
anymore! And this came from a commercial dealer. Anythng to
make money I guess. Also saw a lot of truck drivers buying
marine radio equipment. Geeeeee, what a radio bazaar, wonder
where all the hams were?

> No matter. The regulars in here remain steadfast in defining
> US amateur radio as "CW on HF for DX" and that is that. :-)

Len, let's modify that a wee little bit.

Its been suggested that simply working or being DX isn't enough. An entry in a log book isn't any good. A card on the wall isn't any good. You've got to get it all blessed by the ARRL's DXCC desk. All DX must be sanctioned through the ARRL's DXCC desk, or it just isn't DX.

So, if I may, "US amateur radio is all about CW on HF for DXCC."

;^)

Amateur Radio Newsline™ Report 1307 - August 30th, 2002

Amateur Radio Newsline report number 1307 with a release date of Friday, August 30th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio assists at a world development summit in Africa and hams in Michigan aid in the search for two missing girls. These stories are first on Amateur Radio Newsline report number 1307 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN ACTION: SUMMIT IN SOUTH AFRICA

Ham radio has played a vital role in a World Summit for Sustainable Development held in South Africa. It began on Monday August 26th. Just before the opening gavel fell Hans van de Groenendaal, ZS6AKV, filed this report from Johannesburg:

--
"Radio amateurs will be providing communications assistance at three main operational centers. Members of the South African Radio League's emergency communications arm Hamnet will set up facilities alongside the National Defense Force and the South African Police Services. They will be operating at the main convention center, at Campton Park near Johannesburg International Airport and in Pretoria near the Woodcliff airbase.

Radio amateurs will be using the extensive repeater network in the city as well as H.F.. ZS6BUU, the National Director for the South Africa Radio League's Hamnet has more details:

--
ZS6BUU: "There will also be at least two mobile stations fully equipped to be available should the necessity arise. More vehicles can be called upon if needed.

One vehicle will be on stand-by should we need communications from Lancerial Airport. Now, Lancerial is an alternative airport should Woodcliff Airbase become clogged up with aircraft coming in from al over the world.

Hamnet is required to render emergency communications in association with the SANDF -- that's the defense force as well as our local

police. Hamnet regards this as a good exercise to test our preparedness and how we will be able to handle any emergency -- if and when one should come up."
--

It goes without saying that many other radio amateurs will be available should the need arise.

I'm Hans van de Groenendaal, ZS6AKV, reporting from Johannesburg.

--

The 10-day summit is being billed as the largest in U.N. history. It has been nicknamed Rio+10 because it marks the 10th anniversary of the landmark 1992 Earth Summit in Rio de Janeiro.

**

RESCUE RADIO: MICHIGAN HAMS HUNT FOR MISSING KIDS

They did not plan to get involved but a group of Michigan hams swung into action after a policeman in the town of Grand Haven knocked on the door of Andrew Young, N8ARY. The officer was going door to door looking for two missing area youngsters. On learning of the situation, Young decided to see what he could do to help:

--
Young: "I called a friend of mine who is also an Amateur Radio person because he had a park across from his house where kids generally play. I asked him to keep an eye open for the two children. A few minutes later he called someone else on the repeater and asked them to do the same thing and a few guys heard it and just kind of assembled as a loose knit net."
--

The person that Young called was Donald Smith, N8HCS, also of Grand Haven. He enlisted Smith to keep his eyes open for the two young girls. N8HCS assisted by David Cross, N3WJF, then called up an informal net that grew in size to about a dozen area hams. Most of the action was in the search:

--
Young: "We sort of just stayed out on the street and interacted with people and reported anything we heard back to the net control."
--

As the informal net grew into a formal operation, John Sundstrom, N8YQD was dispatched to be at the girls parents home. His job was to maintain contact after the net turned into a formal search. Coordination and central dispatch where in the hands of Don Meyer, KB8ODB.

The good news came when the girls were located by the police about two hours after the start of the net. This, thanks to a report from

a neighbor who saw the girls and called in.

Young says that with all of the recent abductions in the news, it is nice to see a community mobilize like this to find the missing children. Even better: In this case the search was a complete success. (ARNewsline™)

**

EMERGENCY COMMS: GRANT AIDED ARRL TRAINING TO BEGIN

Word from the American Radio Relay League, that its Amateur Radio Emergency Communications Training Courses supported by a $181,900 federal Homeland Security grant will begin within a few weeks. As previously reported from an ARRL bulletin the League was among several dozen nonprofit organizations designated to receive some $10.3 million in federal money to boost homeland defense volunteer programs. During its first year, the grant will reimburse the cost of Level I ARRL Amateur Radio Emergency Communications Course training for up to 1700 volunteers. More information is on the web at www.arrl.org. (ARRL)

**

Break 1

(5 sec pause here)

**

RADIO RULES: VANITY FEE GOES UP SEPTEMBER 9TH

A new and slightly higher fee for vanity call sign applications will go into effect on September 9th. According to the FCC, applications received on or after that date will be subject to a $14.50 fee for a full ten year license term. (FCC, RAIN)

**

ENFORCEMENT: FCC WEIGHS INTO REPEATER FRAY

The FCC is weighing in on an ongoing repeater versus repeater dispute in Arkansas. The Agency's Daryl Duckworth, NN0W, explains:

--
Duckworth: "We requested further information from Gerald Hogue, KD5CYA, of Conway Arkansas regarding continuing interference between his repeater and the AC5RU repeater. We had notified both parties some time sago that each was responsible for taking steps to minimize interference, but we are seeing no cooperation on the part of the KD5CYA repeater. Hogue has 20 days to respond."

--

But the problem seems to have gone past the repeater versus repeater stage. Now users are getting involved and the FCC is taking action there as well. Again, the FCC's Daryl Duckworth:

--
Duckworth: "On the same topic, the Enforcement Bureau has warned Ronald Lewis of Morrilton Arkansas, KC5BNN, about interference to users of the AC5RU repeater. I was pointed out Lewis that his license renewal comes up in June 2003 and that this matter must be resolved if he is to receive a routine renewal."
--

In its letter to Lewis the FCC said that it will not tolerate deliberate interference between the two repeaters. Also that it does not care if the interference is from a transmission by one of the repeaters or by a user of one of the repeaters making a broadcast intended to degrade the other repeater. Either way, it must stop. (FCC, RAIN)

**

ENFORCEMENT: MORE TROUBLES FOR FAX.COM

More problems for fax.com – the direct fax advertising company recently hit with a 5 point 4 million dollar fine by the FCC. Now a California businessman says that he wants a lot more from the firm in punitive damages for being spammed.

Steve Kirsch, a Silicon Valley executive is suing fax.com for two-point-two trillion dollars. Yes we said trillion with a capitol T. And Kirsch says that he has filed the litigation because he believes that to be the amount consumers should get if the proper penalty is assessed for each and every junk fax ever sent by fax.com, plus triple damages as permitted under federal law.

Kirsch is founder and chief executive of Propel Software in San Jose. He decided to pursue the class action suit after he got a torrent of unsolicited faxed ads. Kirsch estimates an unwanted fax wastes ten cents for the cost of paper, ink and fax machine wear and tear. (Published news reports)

**

NAMES IN THE NEWS: BASS WILL FLY IN OCTOBER

According to the latest news reports, Lance Bass of the boy band 'N Sync will fly to the International Space Station in October. Hollywood producer David Krieff, who has arranged financial backing for the performer's space venture, says that Russian space agency executives and attorneys recently flew to Los Angeles and spent eight days hammering out a 400-page flight agreement with Bass' representatives. Krieff said Bass is slated to blast off October

28th from the Baikonur Cosmodrome in Kazakhstan with two cosmonauts on an eight-day Soyuz "taxi" and resupply mission to the space station. Krieff also disputed remarks attributed to a Rosaviakosmos spokesman Sergei Gorbunov that the Russian space agency might scrub Bass from the mission because he had failed to meet a payment deadline.

Bass hopes to follow in the footsteps of the world's first two space tourists -- American businessman Dennis Tito and South African millionaire Mark Shuttleworth. There is still no word as to whether or not Bass might operate the ham station on board the I-S-S, but the entertainer was scheduled to talk with school children from the Johnson Space Center in Houston on August 29th over the Internet. This, using NASA's Distance Learning Outpost and Education Web Portal. (Published news reports, NASA release)

**

NAMES IN THE NEWS: FORMER HAM TO HOST REVIVAL OF TV GAME SHOW

Donny Osmond, the former KA7EVD, will be helping to bring a legendary television game show back to the small screen. USA Today reports that starting in September, Osmond will be the host of Pyramid, a syndicated revival of the game shows created and hosted by Dick Clark in the 1970s and '80s.

According to Los Angeles ham radio lore, Osmond was reportedly mentored into ham radio in the early 1980's by the late Art Gentry, W6MEP. This, when Osmond and his sister were taping the Donnie and Marie Show at the Golden West Studios in Hollywood. Gentry, who was employed there as a Broadcast Engineer is best known for his development of the FM repeater – a device that changed the way most hams operate on the VHF and UHF Amateur Service bands. He and his wife Millie, K6JJN, were also mentors to many Los Angeles youngsters wanting to enter ham radio. (USA Today, ARNewsline™)

**

NAMES IN THE NEWS: DARA NAMES SCHOLARSHIP WINNERS

Gary Des Combes, N8EMO Chairman of the Dayton Amateur Radio Association Scholarship Committee has announced the recipients of the clubs 2002 scholarship program. Named to receive financial support for their future education are Thomas Tenaglia, K3TAT; William Bailey, KF4VAU; Victoria Morgan, KF4PNI; Nicholas Bishop, KG6JSA; Jeanne Hansen, KB2RAP; Sara Hanna, KE6MWX; Jeffrey Doub, KC8IOC; Michael J. Haessler, KB9TGF and Amy Morris, KI6F. Scholarship awards run between $1000 and $2000. (DARA)

**

HAM RADIO BUSINESS: NEW LINK-COMM SOFTWARE ENHANCES REPEATER CONTROLLERS

Attention repeater owners. If your system uses a Link-Comm controller, have we got good news for you.

Steve Srobel of Link Communications has announced that new programming software for the RLC-1 Plus, RLC-2, RLC-3, RLC-4, and RLC-Club is now available. The new software allows you to program messages, timers, autodial numbers, etc. with a point-and-click interface. It also provides a way to manually edit and upload a file of other advanced commands.

The best part is that it can be downloaded for free from www.linkcomm.com/quickstart.html. You can email feedback about the program to mark@l... (Repeater Owners Remailer)

**

HAM RADIO BUSINESS: COMMEMORATIVE PIN FROM KENWOOD

Kenwood Communications is offering a commemorative "United We Stand" pin with the purchase of any new Kenwood Amateur radio. The offer is good in the United States only and began on August 20th. It runs till further notice. More information as on the web at www.kenwood.net/ama_page.cfm (Kenwood Communications)

**

CONVENTIONS: CB'ERS TO MEET DOWN-UNDER

Are you into C-B radio? Do you like to travel? Would you like to go to a week long C-B Break? Well here's a convention for you.

Q-News reports that the Albatros C-B Radio Club will be holding its annual convention the week of September 14th to the 21st. That's right it is a week long C-B show with all the trimmings. New gear. lectures and what have you.

It all takes place in the city of Ballina. That's down-under -- in Australia. (Q-News)

**

HAMFESTS: LIMARC IN NEW YORK SEPTEMBER 15TH

Closer to home, LIMARC, the Long Island Mobile Amateur Radio Club will be holding its fall hamfest on Sunday, September 15th. The venue is Briarcliffe College in Bethpage, New York. Gates open at 6:30 AM for vendors and for the general public at 8:30 AM Eastern time. More information is in cyberspace at www.limarc.org or call

the 24-hour info line at 516-520-9311. (LIMARC)

**

HAMFESTS AND CONVENTIONS: NRC TO WEBCAST

The National Radio Club will hold its annual convention the Saturday and Sunday prior to Labor Day. N-R-C is a group made up of Medium Wave D-X radio listeners with the club founded back in 1933. And in past years the club has set up a carrier current radio station in the hotel where its conventions are held. Normally you cannot hear the broadcast outside the hotel grounds, but this year could be different. This is because the carrier current station will be helped by a broadcast remote pick-up channel that will be used to send the audio across town to a server that will distribute it as a webcast. The frequency to be used belongs to WLIO television in Lima Ohio. Fred Vobbe, W8HDU, explains what will happen.

--
W8HDU: "At the hotel we're going to place a small walkman radio connected
to an old remote pickup unit. The transmitter is on 26.410 in narrowband
FM, and it will relay back to WLIO's studios where the club will have its
server encoding the data stream. The transmitter runs about 40 watts into
a CB type antenna, and it IDs every 10 minutes with the call WPLP549. The
ID won't be heard on the webcast as it's filtered out at the receiver."
--

If you hear this broadcast, you can get a QSL by sending an accurate report to Fred Vobbe, W8HDU, in care of WLIO Television, 1424 Rice Avenue, Lima Ohio 45805. (NRC, W8HDU)

**

INTERNATIONAL-AUSTRALIA: VANDALISM AND BULLETS ON THE AM BAND

On the international scene, the staff of Brisbane Australia commercial AM station 4BH are in shock after what appears to have been a deliberate attack on the radio station's twin broadcasting towers. Q-News Graham Kemp, VK4BB, has the details:

--
4BH broadcasts on 882 kHz and although now a DMG music station is probably better known from it's "glory days" as the Queensland Key Station of the Macquarie Broadcasting Network.

Police are investigating an incident just before 9 o'clock Monday August 19 which saw both broadcasting towers have their guys cut with

what appears to have been bolt cutters, which sent them crashing to the ground, putting the radio station off air, and coming to rest just meters away from a caravan park.

The broadcast industry in Brisbane rallied around, SWITCH AM a public community access station at Long Pocket on 1053 kHz has gone "off air", donating their transmission facility to the Commercial station. 4BH was back on air just 27 hrs later at just some 800 watts, instead of their 5kW, using a retuned 1053 TX and tower, retuned thanks to Radio TAB engineering staff winding some 11 heavy duty inductors.

This incident is unprecedented and has ramifications for all commercial radio broadcasters and the Commercial Broadcasters Industry Association has said "While it is hoped that this situation will not occur again it may be advisable for stations to review, and where necessary, upgrade security arrangements at their transmission facilities".

This is the same site which saw thieves using bolt cutters gain entry to steal some 2 dozen satellite dishes belonging to Radio TAB early in the year. Allegedly the 4BH studios in suburban Stones Corner were fired upon recently, at least one bullet penetrating an office.

From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

Investigators have not been disclosed whether the three incidents are related. (Q-News)

**

SPECIAL EVENT: DRAKE ON THE LAKE

Back on this side of the Pacific, Greg Compton, N5ZFW, reports over the Internet that the Cherokee County, Texas Amateur Radio Club will be operating special event station called "Drakes On the Lake." This taking place the weekend on September 14th and Sunday the 15th.

The station, using all vintage R.L. Drake gear will be operated on the shore of Lake Jacksonville, which is near Jacksonville, Texas on 20, 40 and 80 meters. Callsigns to be used are AD5KM or KI5P. QSL with a 9 by 12 SASE to Brad Low, AD5KM, 840 Henderson Street Jacksonville, Texas, 75766. (From Internet posting)

**

DX

In D-X, members of the 8Q7ZZ youngsters' DXpedition to the Maldives have returned home after a highly successful operation. Mark Haynes, M0DXR, reports that the group made over 25,000 QSOs between the 30th

of July and 10th of August, including around 330 on 6 meters. The QSL manager for 8Q7ZZ is Phil Whitchurch, G3SWH. (GB2RS)

**

THAT FINAL ITEM: CELL PHONE RELIABILITY

And finally this week, a graphic example of how the cellular telephone network can hiccup at the most inopportune time. Earlier in this newscast, we talked to Andrew Young, N8ARY, up in Grand Haven Michigan. Andrew was using a cellular phone. One of the topics that he and our Producer Bill Pasternak, WA6ITF, were discussing was the reliability of these devices. Guess what happened next:

--
Pasternak: "It seems to me that more and more hams are carrying cellphones than HT's. Have you noticed that also?

Young: "Yes. Myself, I have a cellphone that rarely works when there is a busy time -- like during some sort of event. When a lot of people get in one area mu cellphone almost never works and usually I have t...."

Phone line sound: "click. click."

Pasternak. Hello.... Hello.... I think your cellphone stopped working."
--

Talk about a graphic example happening at the most convenient time. Thats right. The cellular phone system up in Michigan did what so many seem to do. It abruptly went away.

Ham radio is always there when you need it. Another good reason to always carry your H-T when you are out and about. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

No before we go, a special word of congratulations to Amateur Radio Newsline reporter Cathy Anno, KB0FDU. This on the birth of her third child -- a boy named Conner William Anno born on Friday August 23rd. Little Conner weighed in at just over 6 pounds and was 19 1/2 inches long. Cathy describes her new son as being -- and we quote -- "just

perfect." And less we forget, Cathy, her husband Darren and little Conner are all doing just fine.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Norm Seely, KI7UP, saying 73, and we thank you for listening." Amateur Radio Newsline is Copyright 2002. All rights reserved.

> out to the pacific long into the night while ten meters is silent. dont
you think the arrl and the FCC see we are making better use of the bands?
most of these dick head hams in here are no codes, you guys would be better
off picking a 6 meter freq and hoping for whats left of the cycle to do some
magic if you want to work most of these idiots. thats why the FCC not only
dont bust freebanders but they look to us as the future of the hobby. look
at Rain report they are all hams being popped. Ham is dieing and nocodes
like JJ can only sit and bitch like fat old men.

..._ ._. ._ ... _ .._ ._ _ . .. _.. _._. _... . ._. .-.-.-

Some of the hams may be no codes. Fellas, don't tell this jerk what the
above phrase says.
Let's see if he has any business making fun of no coders.

Oh, btw, I saw a whole BUNCH of young hams at a hamfest this weekend, some
of whom are
very pretty young girls. Bright-eyed, good-looking, interested in the
hobby, they certainly are not
what you would like for ham radio to be. It is NOT dying (learn to spell,
you "idjit"), and if you think the government is about to "reward" a bunch
of lawless, clueless, knotheaded, and radio-
ignorant clowns that talk like backwoods goons, you are even more stupid
than I thought!

Perhaps in a few years, the American public will rise up and say those damned amateurs have had it too easy, and institute an examination system that rivals that of the professional engineering societies.
